

Appendix A

Notice of Preparation and Comment Matrix

County of El Dorado
Notice of Preparation of a Draft Environmental Impact Report
and Notice of Public Scoping Meeting for the
Village of Marble Valley Specific Plan

Date: February 20, 2013

To: Interested Parties

From: Rommel (Mel) Pabalinas, Senior Planner, County of El Dorado

Subject: Notice of Preparation of a Draft Environmental Impact Report and Notice of Public Scoping Meeting for the Village of Marble Valley Specific Plan (File No. SP12-0003)

The County of El Dorado (County) will be the lead agency under the California Environmental Quality Act (CEQA) for preparation of an Environmental Impact Report (EIR) for the Village of Marble Valley Specific Plan in El Dorado County. The purpose of this 30-day Notice of Preparation (NOP) and notice of public scoping meeting is to solicit comments from public agencies and interested persons regarding the scope and content of the environmental information and analyses, including the significant environmental impacts, reasonable alternatives, and mitigation measures that should be included in the Draft EIR (pursuant to CEQA Guidelines Section 15082). The location, project description, proposed entitlement requests, and potential environmental effects of the proposed Village of Marble Valley Specific Plan are summarized in the attached materials.

Please provide written comments to **Mr. Rommel (Mel) Pabalinas, Senior Planner**, at the address shown by 5:00 p.m. on March 22, 2013. Keep in mind that there will be another opportunity to submit detailed comments when the Draft EIR is released for public review. Please mail, email, or fax your comments to:

Rommel (Mel) Pabalinas, Senior Planner
El Dorado County Development Services Department, Planning Division
2850 Fairlane Court, Building C
Placerville, CA 95667
Email: rommel.pabalinas@edcgov.us
Fax: (530) 642-0508

The County will hold a public scoping meeting to provide additional information about the project and to receive verbal and written input on Wednesday, March 6, 2013 from 6:30 p.m. to 8:30 p.m. at Cameron Park Community Services District, Assembly Hall, 72502 Country Club Drive, Cameron Park, CA 95682. The scoping meeting format will be an open house; interested parties may arrive at any time during the 2-hour window to receive information on the project or provide input.

NOTICE OF PREPARATION OF
A DRAFT ENVIRONMENTAL IMPACT REPORT (EIR)
AND NOTICE OF PUBLIC SCOPING MEETING
FOR THE
VILLAGE OF MARBLE VALLEY SPECIFIC PLAN

Project Information

Location: The site for the Village of Marble Valley Specific Plan (VMVSP) (project) comprises approximately 2,341 acres located in the unincorporated area of the County of El Dorado (County) south of U.S. Highway 50 (US 50), and is located approximately 19 miles west of Placerville and 24 miles east of downtown Sacramento (Figure 1, Regional Location). This is where the 398-lot Marble Valley Master Plan was previously approved by the El Dorado County Board of Supervisors in 1998. The VMVSP is a proposed amendment to the approved Marble Valley Master Plan. The site is approximately 1,000 feet southeast of the US 50 and the Bass Lake Road interchange in El Dorado Hills, California, and consists of Assessor's Parcel Numbers (APNs) 087-200-74; 119-020-56 and 119-020-57; 119-030-13 through 119-030-19; and 119-330-01 (Figure 2, Project Location).

The proposed project site is surrounded by the Cambridge Oaks residential development and US 50 to the north; Marble Ridge residential development and Valley View Specific Plan area to the west; Ryan Ranch residential development to the southwest; Sun Ridge Systems to the south; and Cameron Estates, the proposed Lime Rock Valley Specific Plan, Deer Creek Wastewater Treatment Plant, and Royal Equestrian Estates to the east.

Project Description: The proposed VMVSP would consist of an approximately 2,341-acre project with up to 3,236 dwelling units, 475,000 square feet of commercial use, 87.1 acres of public facilities/recreational use, 1,281.9 acres of open space, 41.8 acres of agricultural use, and 73.8 acres of new road impact areas and future right-of-way. Planned improvements will take place on approximately 1,875 acres located mostly north of Deer Creek. The proposed project is designed in a manner that concentrates a majority of the development along a 1-mile core adjacent to the entry roadway and preserves, enhances, and highlights the historic character of the site derived from the historical use of the property for limestone mining. Table 1 shows the proposed land use designations. These designations are also shown in Figure 3, Proposed Land Use Designations.

Table 1. Proposed Land Use Summary

Land Use Designation	Area (Acres)	Percent of Total Area	Residential Units	Commercial Area (Square Feet)
Residential				
LDR - Low-Density Residential (0.9-5.0 Dwelling Units/Acre)	685	29%	1,963	NA
MDR - Medium-Density Residential (5.0-12.0 Dwelling Units/Acre)	85	4%	708	NA
High-Density Residential - (12.0-24.0 Dwelling Units/Acre)	28	1%	501	NA
<i>Subtotal</i>	<i>798</i>	<i>34%</i>	<i>3,172</i>	<i>NA</i>
Commercial				
OP - Office Park	41	2%	NA	375,000
VC - Village Commercial	19	1%	64	100,000
<i>Subtotal</i>	<i>60</i>	<i>3%</i>	<i>64</i>	<i>475,000</i>
Agriculture				
AT - Agriculture Tourism	42	2%	NA	NA
<i>Subtotal</i>	<i>42</i>	<i>2%</i>	<i>NA</i>	<i>NA</i>
Public Facilities				
PS - Public School (K5 and/or K8)	35	1%	NA	NA
VP - Village Park ^a	47	2%	NA	NA
NP - Neighborhood Park	TBD	0.0	NA	NA
PU - Public Utilities	5	0%	NA	NA
<i>Subtotal</i>	<i>87</i>	<i>4%</i>	<i>NA</i>	<i>NA</i>
Open Space				
OS - Open Space	1,282	55%	NA	NA
<i>Subtotal</i>	<i>1,281.9</i>	<i>54.7</i>	<i>NA</i>	<i>NA</i>
Road Impact Areas and Future Right-of-Way	73	3%	NA	NA
Total	2,342	100%	3,236	475,000
Notes: NA = Not applicable; TBD = to be determined				
^a Includes Marble Lake (9.9 acres)				
Source: Marble Valley Company, LLC, 2012				

Proposed Entitlement Requests: The proposed project is an amendment to the previously approved Marble Valley Master Plan. The amendment would include changes to the County general plan, adoption and implementation of the VMVSP, and rezoning. In addition, the project would require the County's approval of a development agreement, financing plan, and subsequent development permits and entitlements including a Development Plan and Tentative Maps. Specifically, the entitlement requests for the proposed project are provided as follows.

- The proposed general plan amendment would expand the Community Region of El Dorado Hills to include the VMVSP area on the General Plan Land Use Map, and amend the General Plan Land Use Map designation of subject lands from Low-Density Residential (LDR) (1.0 Du/5.0 acres) to Adopted Plan-Village of Marble Valley Specific Plan (AP-VMVSP) and VMVSP land use designations Low-Density Residential (LDR) (0.9- 5.0 Du/Ac), Medium-Density Residential (MDR) (5.0 - 12.0 Du/Ac), High-Density Residential (HDR) (12.0 - 24.0 Du/Ac), Office Park (OP), Village Commercial (VC), Public Utilities (PU), Public School (PS), Village Park (VP), Agriculture Tourism (AT), Open Space (OS), and Public Open Space (POS).
- The proposed zone change would amend zone districts from Estate Residential Five Acre-Planned Development (RE-5-PD) and Open Space (OS) to VMVSP zone districts Single Family 15K-Planned Development (R15-PD), Single-Family 10K-Planned Development (R10-PD), Single-Family 6K-Planned Development (R6-PD), Single-Family 4K-Planned Development (R4-PD), Multi-Family Low-Density-Planned Development (RM1-PD), Multi-Family Medium-Density-Planned Development (RM2-PD), Multi-Family High-Density-Planned Development (RM3-PD), Office Park-Planned Development (C1-PD), Retail-Planned Development (C2-PD), Entertainment-Planned Development (C3-PD), Mixed Use-Planned Development-(C4-PD), Lodging-Planned Development (C5-PD), Vineyards-Planned Development (AT1-PD), Private Open Space-Planned Development (OS1-PD), Public Open Space-Planned Development (OS2-PD), and Preserve-Open Space Planned Development (OS3-PD).
- Implementation of the proposed project would require the County's approval to amend the approved Development Agreement DA97-0001 and the Master Plan for Marble Valley under Tentative Map TM95-1298 ,TM95-1299 and Planned Development PD96-0004.
- Specific Plan for the proposed Village of Marble Valley for the development of an approximately 2,341-acre project with up to 3,236 dwelling units; 475,000 square feet of commercial use; 87.1 acres of public facilities/recreational use; 1,281.9 acres of open space; 41.8 acres of agricultural use; and 73.8 acres of new road impact areas and future right-of-way.

Potential Environmental Effects: Based on a preliminary environmental analysis of the VMVSP, the County has determined that the full range of issues identified in the CEQA Guidelines, listed below, shall be addressed in the EIR.

- Air Quality
- Biological Resources
- Cultural Resources
- Geology, Soils, Minerals, and Paleontology
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology, Water Quality, and Water Resources
- Land Use Planning and Agricultural Resources
- Noise and Vibration
- Population and Housing
- Public Services and Utilities
- Recreation
- Traffic and Circulation
- Visual Resources

In addition to the above areas, the Draft EIR will also evaluate the potential cumulative and growth-inducing effects of the project, as required by CEQA. Reasonably foreseeable future projects will be considered in the Draft EIR, including, but not limited to, the proposed Lime Rock Valley Specific Plan, the proposed Central El Dorado Hills Specific Plan, and the proposed Dixon Ranch Residential Project. Applications have been submitted to the County for these projects, and they are currently undergoing CEQA review.

Comments and suggestions are requested regarding the environmental issues that will be analyzed in the EIR during the 30-day public comment period for the NOP.

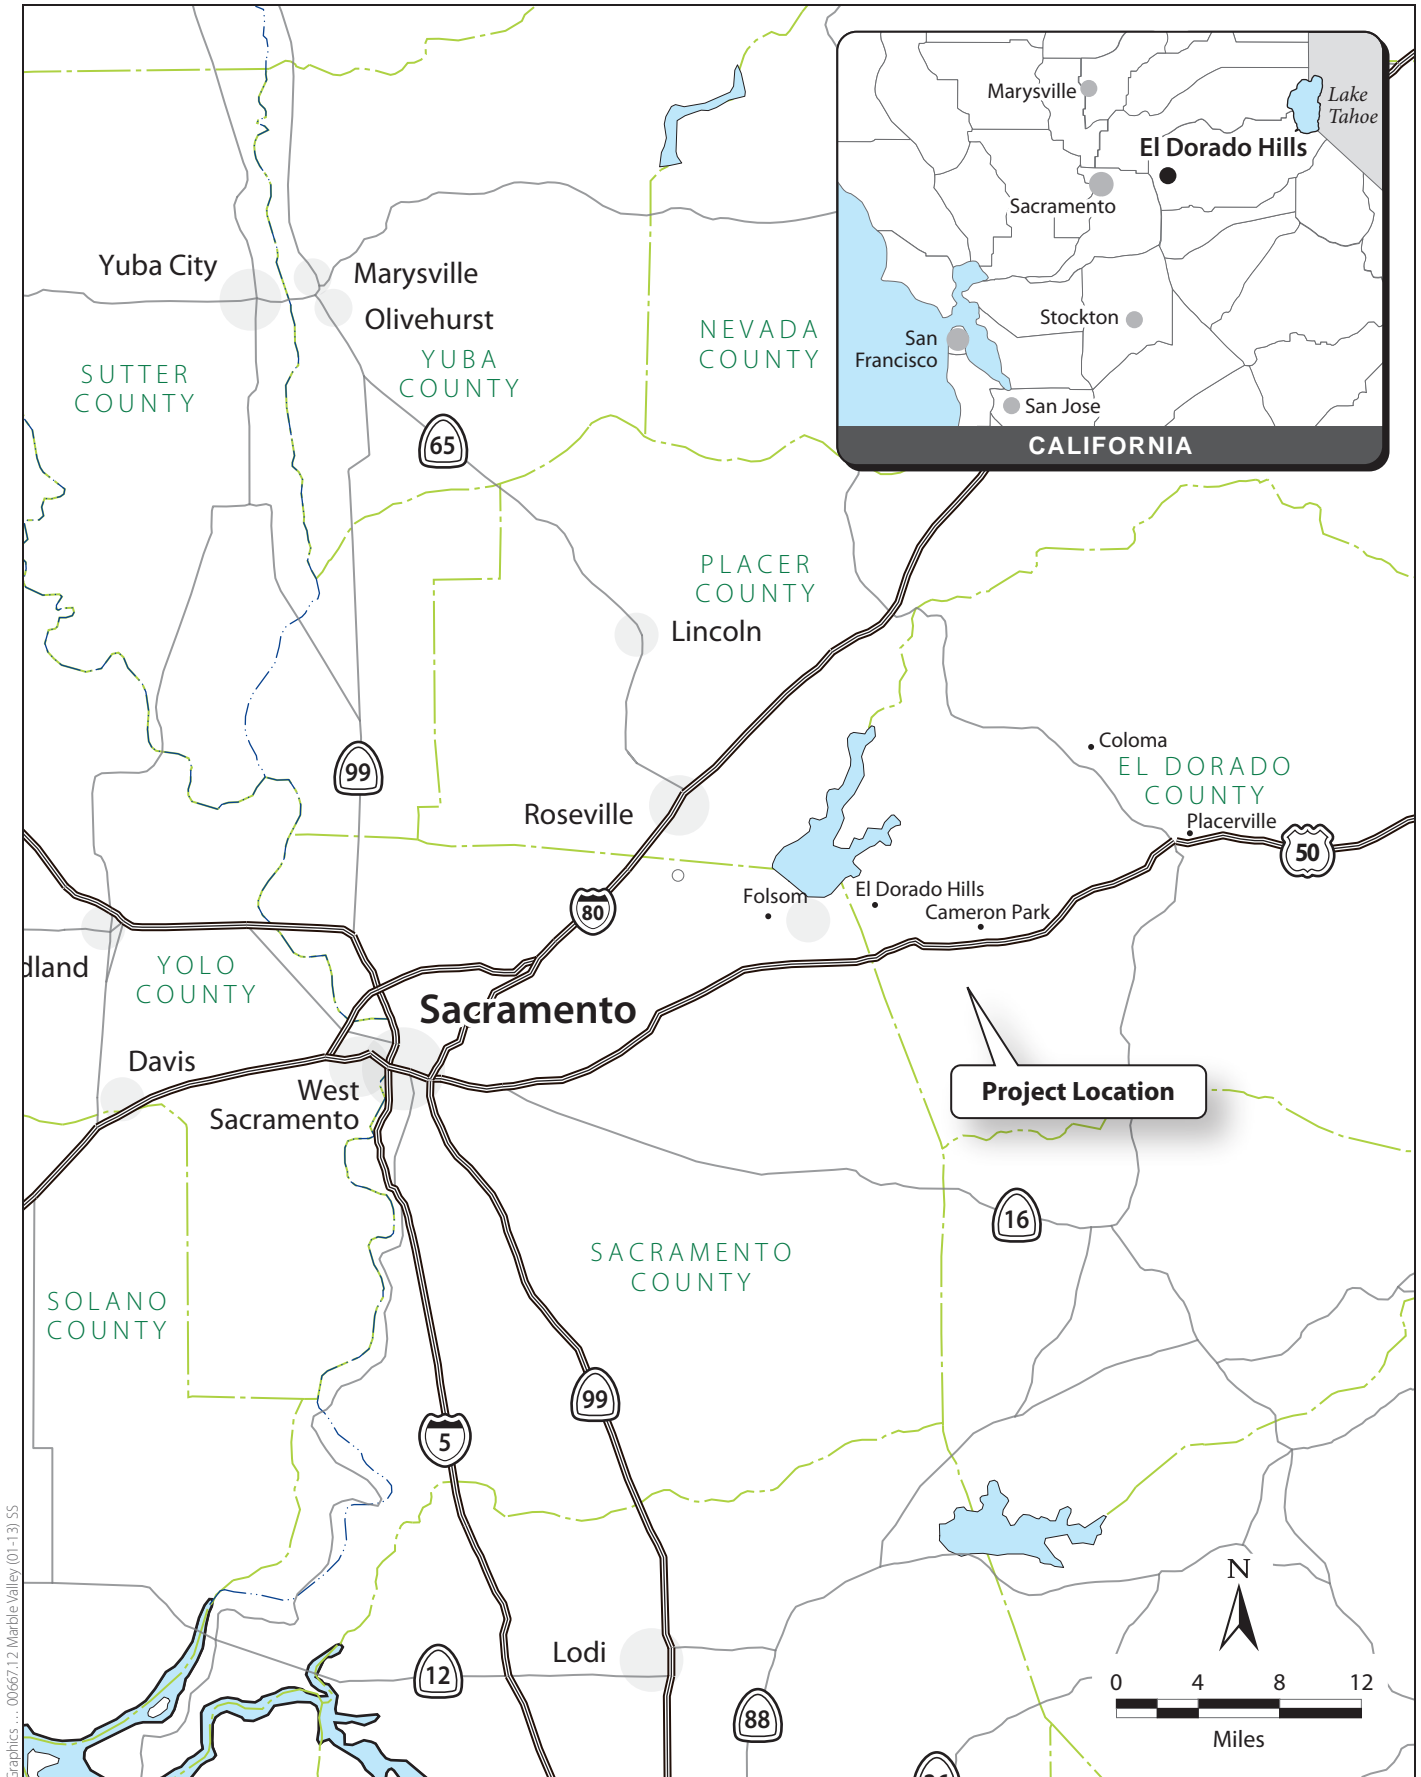

Potential Alternatives to be addressed in the EIR: In accordance with Section 15126.6 of the State CEQA Guidelines, an EIR must “describe a range of reasonable alternatives to the Project, or to the location of the Project, which would feasibly attain most the basic objectives of the Project, but would avoid or substantially lessen any of the significant effects of the Project, and evaluate the comparative merits of the alternatives.” As required by CEQA, the EIR will evaluate a no project alternative (i.e., no amendment to 1998 Marble Valley Master Plan), which will assume development of the site under the currently adopted General Plan, approved Development Plan, Development Agreement, Tentative Map for the 1998 Marble Valley Master Plan, and zoning designation. Aside from the no project alternative, the County has not yet determined what additional alternatives to the project will be evaluated in the EIR. These will be identified during the environmental review process. Once selected, the alternatives will be analyzed at a qualitative level of detail in the Draft EIR for comparison against the impacts identified for the proposed project, consistent with the requirements of CEQA.

Public Scoping Meeting

The County will hold a public scoping meeting to provide additional information about the project and to receive verbal and written input on Wednesday, March 6, 2013 from 6:30 p.m. to 8:30 p.m. at Cameron Park Community Services District, Assembly Hall, 72502 Country Club Drive, Cameron Park, CA 95682. The scoping meeting format will be an open house; interested parties may arrive at any time during the 2-hour window to receive information on the project or provide input.

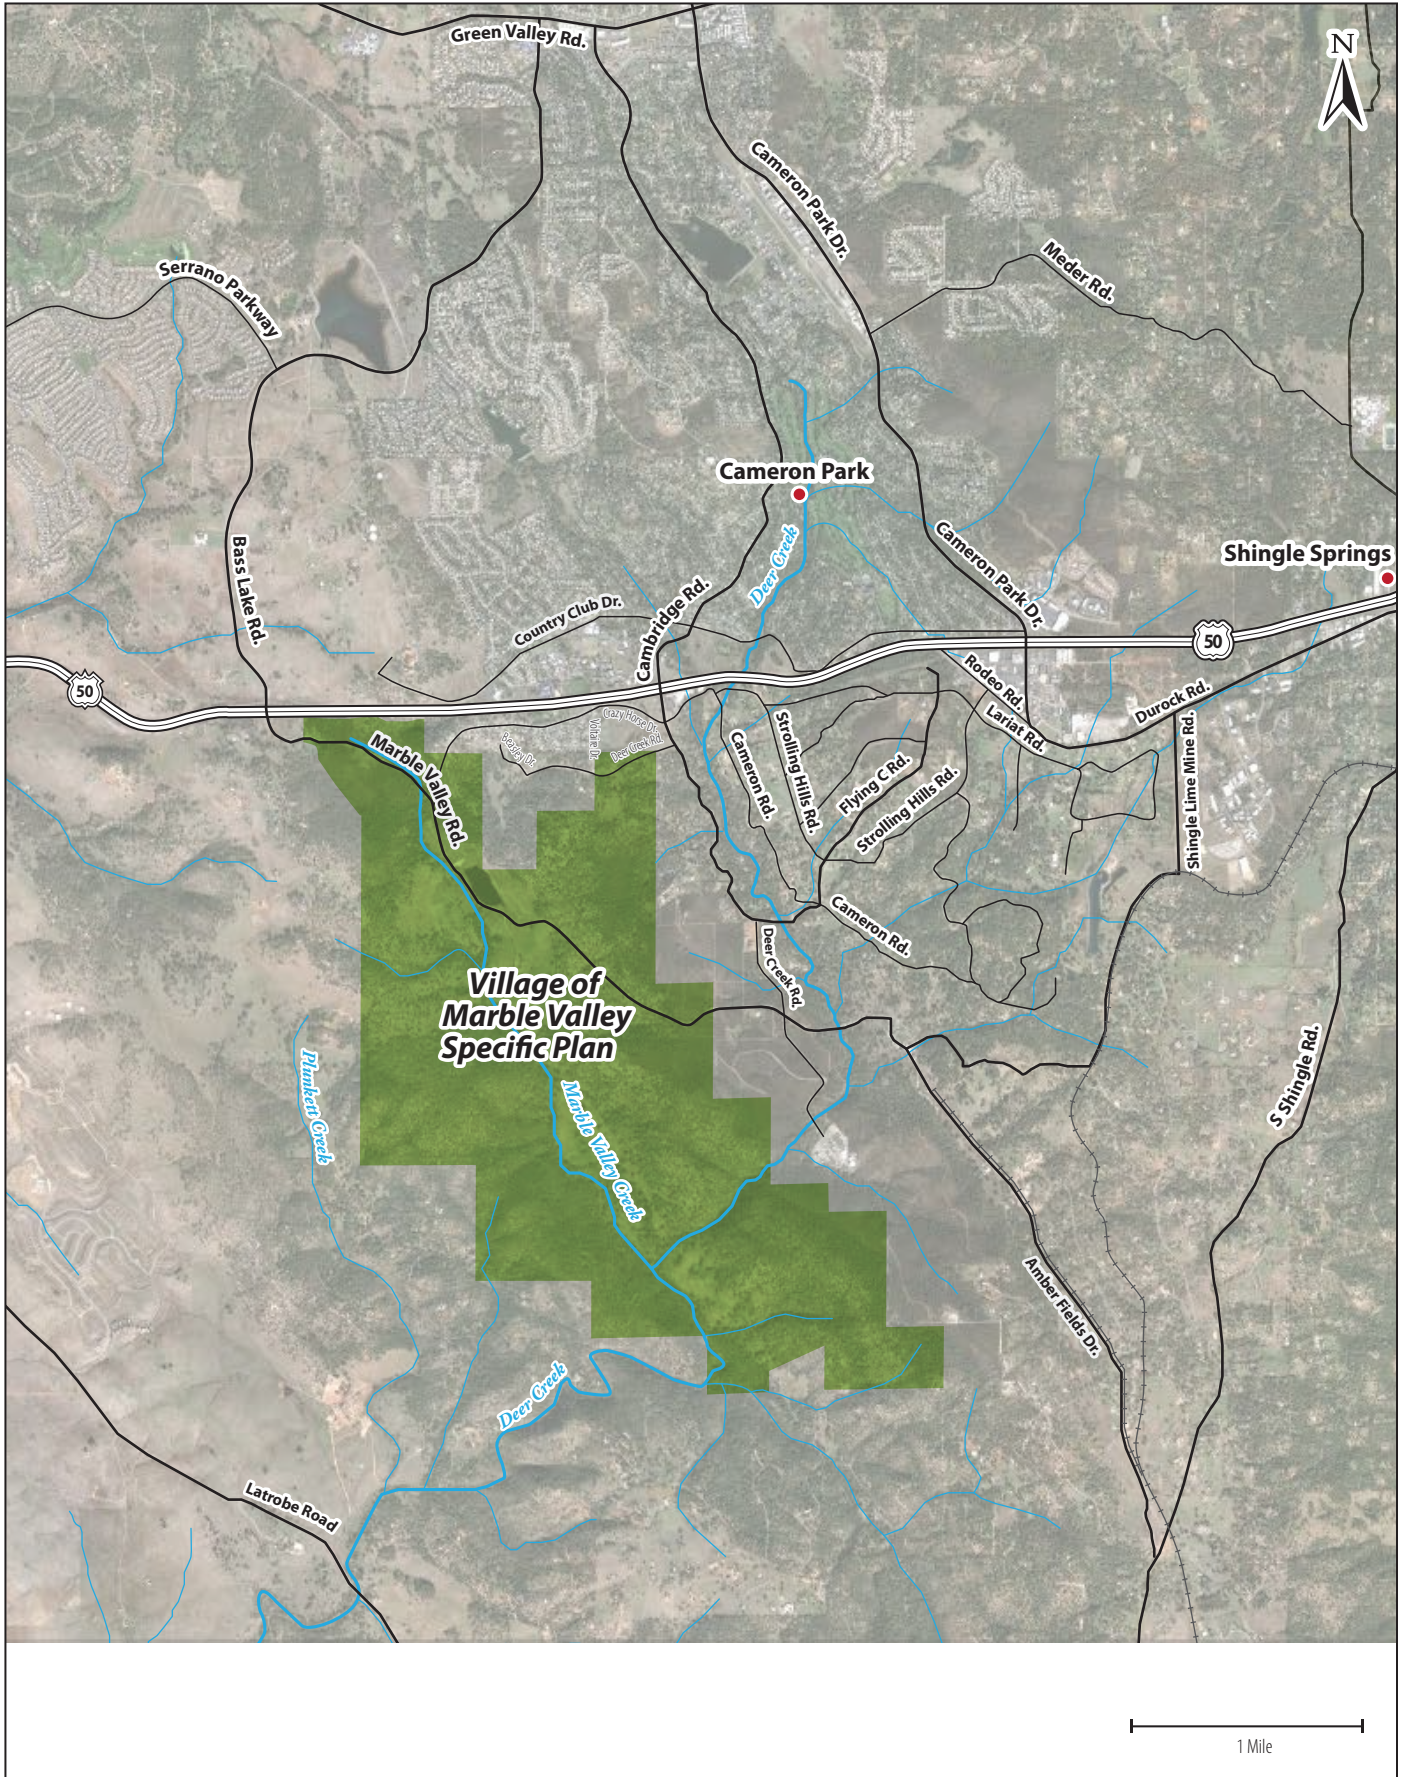

Requests for Additional Information

If you have any questions, please contact Rommel (Mel) Pabalinas at the County of El Dorado, Development Services Department, Planning Division, 2850 Fairlane Court, Building C, Placerville, CA 95667, by telephone at (530) 621-5363, or by email to rommel.pabalinas@edcgov.us.

<u>Party Name</u> (Last name, First name: Agency or Organization name)	<u>Date Received</u>	<u>Party Type/ Letter Number/ Comment Number</u>	<u>Federal, State, Local, Organization, Form, Individual</u>	<u>Comment Topic</u>	<u>Refined Topic</u>	<u>Section</u>	<u>Mitigation (if applicable)</u>
Lusi, Tom	3/6/2013	IP01	Individual	WQ/Hydro	Where is EID getting water from?	EID has two broad categories of water assets that are available for the proposed project: secured water assets and planned water assets. These supplies are shown in Section 3.12 , Public Services and Utilities, Table 3.12-3 and impacts are discussed in Impact PSU-5	
Mard, Karen	3/6/2013	IP02	Individual	Design	road naming suggestion-too many "Marbles" - it's confusing	Comment noted. Not a CEQA issue.	
Lusi, Mary	3/6/2013	IP03	Individual	Design	road naming suggestion-too many "Marbles"	Comment noted. Not a CEQA issue.	
Anderson, Harold & Christine	3/6/2013	IP04	Individual	Visual/Aesthetics	siting of water tanks and visual impacts	See Section 3.1 , Aesthetics (Impact AES-1, AES-2, AES-4) and Section 3.10 , Noise	Mitigation Measure AES-2
Faulkner, Jeff & Joelle	3/6/2013	IP05	Individual	Noise/Visual	HDR, school, park uses will cause noises and visual impacts	Not a CEQA issue.	Mitigation Measures AES-2, NOI-1a and NOI-1b
	3/6/2013	IP05	Individual	Quality of Life	opposes zoning change, quality of life	Not a CEQA issue.	
	3/6/2013	IP05	Individual	Land use	purchased lot specifically because adjacent Marble Valley was zoned LDR	Not a CEQA issue.	
	3/6/2013	IP05	Individual	Economic	reduced value of property	Not a CEQA issue.	
Bergman, Mattias	3/21/2013	IP06	Individual	Transportation	wants to maintain easy access to freeway from Marble Mt. Community Services District	See Section 3.14 , Traffic and Circulation (Impact TRA-1) and Section 3.8 , Hydrology, Water Quality, and Water Resources (Impact WQ-2)	Mitigation Measure TRA-1
	3/21/2013	IP06	Individual	WQ/Hydro	concerned about aquifer impacts		Mitigation Measure WQ-2
	3/21/2013	IP06	Individual	Noise/Visual	construction/traffic noise	See Section 3.1 , Aesthetics (Impact AES-1) and Section 3.10 , Noise and Vibration (Impact NOI-1, NOI-2, and NOI-4)	Mitigation Measure NOI-1
	3/21/2013	IP06	Individual	Visual/Aesthetics	light pollution	Addressed in Section 3.1 , Aesthetics (Impact AES-5)	Mitigation Measure AES-2
	3/21/2013	IP06	Individual	Public Services	potential for increase in crime-how will it be addressed?	Not a CEQA issue	
Willson, Rick and Julie	3/20/2013	IP07	Individual	Design	Residential development should remain single-family, 1-story. Support 2008 approved plan	Comment noted	
	3/20/2013	IP07	Individual	Design/Transportation	agrees with main roadway as desgined, providing no changess made	Comment noted	
	3/20/2013	IP07	Individual	Visual/Aesthetics	street lighting should be downcast if at all	Addressed in Section 3.1 , Aesthetics (Impact AES-5)	Mitigation Measure AES-2
	3/20/2013	IP07	Individual	Design	supports current plan by Parker, no sports field lighting	Lighting is addressed in Section 3.1 , Aesthetics (Impact AES-5)	Mitigation Measure AES-2
	3/20/2013	IP07	Individual	Design	water tanks should be hidden from view	Addressed in Section 3.1 , Aesthetics (Impact AES-1)	
Kinghorn, David	3/22/2013	IP08a	Individual	Design/Zoning	blatant attempt to overturn responsible zoning. Plans are too much, too big.	A discussion of the general consistency of the proposed project with the policies of the General Plan is presented in Section 3.9 , Land Use Planning and Agricultural Resources, Table 3.9-3	
	3/22/2013	IP08a	Individual	Noise/Traffic/Crime	Impacts to noise, traffic, increase in strangers visiting and crime/vandalism	Traffic impacts addressed in Section 3.14 , Traffic and Circulation (Impact TRA-2); See Section 3.10 , Noise. Crime, strangers, and vandalism are not issued addressed in CEQA.	Mitigation Measure TRA-2
	3/22/2013	IP08a	Individual	General	commercial interests clashing with residents values	Not a CEQA issue.	
	3/22/2013	IP08a	Individual	Haz/Mat, Recreation	quarry pond is a danger and should be fenced-off. Toxins from Marble Creek flow into the pond - could cause algae growth	The project proposes to develop the quarry pond and will include landscape modifications- see Section 5.3.5 of the Specific Plan. Marble Valley Creek is not listed as an impaired water body, see Section 3.8 , Hydrology, Water Quality and Water Resources.	
	3/22/2013	IP08a	Individual	Noise	Amphitheater will cause increase in noise	Addressed in Section 3.10 , Noise (Impact NOI-1 and NOI-3) Noise impacts are addressed in Section 3.10 , Noise and Vibration (NOI-1, NOI2, NOI-3). Section 3.2 , Air Quality	Mitigation Measure NOI-1b
	3/22/2013	IP08a	Individual	Public Services/Traffic/Haz Mat	proposed schools too close to pollution, noise and vibration of Hwy 50	discusses air quality and pollution. School sites were recommended by school districts. Speculative; Crime is not a CEQA issue. Traffic impacts addressed in Section 3.14 , Traffic and Circulation (Impact TRA-2)	Mitigation Measure NOI-1b
	3/22/2013	IP08a	Individual	Crime/Traffic	Foundation Park will attract criminals who will drive through the developemnt to get to park, unchecked. Increased traffic.		Mitigation Measure TRA-2

<u>Party Name</u> (Last name, First name; Agency or Organization name)	<u>Date Received</u>	<u>Party Type/ Letter Number/ Comment Number</u>	<u>Federal, State, Local, Organization, Form, Individual</u>	<u>Comment Topic</u>	<u>Refined Topic</u>	<u>Section</u>	<u>Mitigation (if applicable)</u>
	3/22/2013	IP08a	Individual	Transportation	people will want to turn fire access road into regular access road resulting in increased traffic	This is speculative. Traffic impacts are addressed in Section 3.14 , Traffic and Circulation (Impact TRA-1)	Mitigation Measure TRA-1
	3/22/2013	IP08a	Individual	Landscaping	Grape vines in median will not work; ludicrous; will be unattractive in winter; a way to avoid proper landscaping	Comment noted. See Section 3.1 , Aesthetics for visual impacts.	
Kinghorn, David	3/24/2013	IP08b	Individual	same as IP08, with typos corrected, per commenter	See above	See above	
Guthrie, Karen	3/25/2013	IP09	Individual	Design/General Plan	3,200 additional residents extreme; not consistent with GP	A discussion of the general consistency of the proposed project with the policies of the General Plan is presented in Section 3.9 , Land Use Planning and Agricultural Resources Table 3.9-3	
	3/25/2013	IP09	Individual	Transportation	increased traffic on Bass Lake Rd. interchange not workable	Addressed in Section 3.14 , Traffic and Circulation (Impact TRA-1 and TRA-2)	Mitigation Measure TRA-1 and TRA-2
	3/25/2013	IP09	Individual	Transportation	southern route parallel to Hwy 50 should be explored. Resulting traffic jams will cause residents to use alt routes through Cameron Park. Those residents pay for their road maintenance	Speculative regarding behavior of motorists. Traffic impacts are addressed in Section 3.14 , Traffic and Circulation (Impact TRA-1 and TRA-2). Alternate commute routes are outside the scope of this project.	Mitigation Measure TRA-1 and TRA-2
	3/25/2013	IP09	Individual	Design	Cameron Park already burdened with low-cost housing.	Land use is discussed in Section 3.9, Land Use Planning and Agricultural Resources. There is no affordable housing requirement in El Dorado County.	
Chapman, Clark	3/21/2013	IP10	Individual	School Design/Traffic	Are 2 schools needed? And if so, should be sited further apart to help reduce traffic	School sites were selected by School Districts. Demand for schools is discussed in Section 3.12 , Public Services and Utilities, and Traffic impacts are addressed in Section 3.14 , Traffic and Circulation (Impact TRA-2)	Mitigation Measure TRA-2
	3/21/2013	IP10	Individual	Visual/Aesthetics	concerned about park lights and park hours	Parks are discussed in Section 3.13 , Recreation and impacts from lighting are addressed in Section 3.1 , Aesthetics (Impact AES-5)	Mitigation Measure AES-2
	3/21/2013	IP10	Individual	Design/Visual/Aesthetics	Commercial 3-story bldgs should be 2-story max	Addressed in Section 3.1 , Aesthetics (Impact AES-2, AES-3, AES-4)	Mitigation Measure AES-2
	3/21/2013	IP10	Individual	Transportation	hopes planning dept. will review expanding Bass Lake interchange to ease traffic congestion.	Alternative explored? Traffic impacts addressed in Section 3.14, Traffic and Circulation (Impact TRA-2)	Mitigation Measure TRA-2
Heuerman, Jeff and Michelle	3/21/2013	IP11	Individual	Transportation	traffic congestion at interchange a big concern (esp. @ highway 50 during ski season)	Traffic impacts addressed in Section 3.14 , Traffic and Circulation (Impact TRA-1 and TRA-2)	Mitigation Measure TRA-1 and TRA-2
	3/21/2013	IP11	Individual	Noise	Concerned about years of construction noise	Construction noise is addressed in Section 3.10 , Noise and Vibration (Impact NOI-1 and NOI-4)	Mitigation Measure NOI-1a
	3/21/2013	IP11	Individual	Design	Concern about condos bringing transitory residents and lowering property values, please address specific plan for any condos and cheaper housing	Not a CEQA issue	
Strohn, Leigh	3/22/2013	IP12	Individual	Design/traffic	density will increase traffic, Bass lake/Cambridge will be overwhelmed, especially on weekends	Traffic impacts addressed in Section 3.14 , Traffic and Circulation (Impact TRA-2)	Mitigation Measure TRA-2
	3/22/2013	IP12	Individual	Biological Resources	wildlife impacts	Impacts to wildlife and biological resources are addressed in Section 3.3 , Biological Resources.	
	3/22/2013	IP12	Individual	Air Quality		Impacts to air quality are addressed in Section 3.2	
	3/22/2013	IP12	Individual	Visual/Aesthetics	light pollution	Impacts related to light and glare are addressed in Section 3.1 , Aesthetics (Impact AES-5)	Mitigation Measure AES-2
	3/22/2013	IP12	Individual	Noise/Traffic	Two schools will increase both	Noise impacts are addressed in Section 3.10 , Noise and Vibration (Impact NOI-1 and NOI-3) and traffic impacts are addressed in Section 3.14 , Traffic and Circulation.	Mitigation Measure NOI-1b
Palmer, Steve	3/22/2013	IP13	Individual	Biological Resources	impacts to wildlife habitat, wildlife corridors	Impacts to wildlife and biological resources are addressed in Section 3.3 , Biological Resources.	
	3/22/2013	IP13	Individual	Visual/Aesthetics	light pollution from multiple sources a concern	Impacts related to light and glare are addressed in Section 3.1 , Aesthetics (Impact AES-5)	Mitigation Measure AES-2
	3/22/2013	IP13	Individual	Visual/Aesthetics	please consider visual impact to residents	Visual impacts are addressed in Section 3.1 , Aesthetics (Impact AES-1, AES-2, AES-3, AES-4)	Mitigation Measure AES-2

<u>Party Name</u> (Last name, First name; Agency or Organization name)	<u>Date Received</u>	<u>Party Type/ Letter Number/ Comment Number</u>	<u>Federal, State, Local, Organization, Form, Individual</u>	<u>Comment Topic</u>	<u>Refined Topic</u>	<u>Section</u>	<u>Mitigation (if applicable)</u>
Peel, Jeff and Dana	3/22/2013	IP14	Individual	Transportation	2 small country roads used currently for access and egress will experience increased traffic and access issues will result	Traffic impacts are addressed in Section 3.14 , Traffic and Circulation.	
	3/22/2013	IP14	Individual	Transportation	more traffic in all neighboring communities; also potential for increased crime	Increased crime is speculative and not a CEQA issue. Traffic impacts are addressed in Section 3.14, Traffic and Circulation.	
	3/22/2013	IP14	Individual	Water supply	current residents use wells with varying capacity, if any well water used (e.g. dust control) it could be problematic for the water supply of the current residents.	Water supply is addressed in Section 3.12 , Public Services and Utilities. No well water use is proposed.	
Price, Lindell	3/22/2013	IP15	Individual	All environmental impacts	review traffic, AQ/GHG, LU, Public Services and provisions for mail delivery, medical emergency, haz/mat safety.	This document addresses the full range of potential environmental impacts. See Chapter 3.	
	3/22/2013	IP15	Individual	Transportation	review cumulative traffic impacts	Cumulative impacts are addressed in Chapter 5; cumulative traffic impacts are discussed in Section 5.2.2 .	
	3/22/2013	IP15	Individual	Transportation	assess traffic, AQ/GHG, safety, alt. transportation related to longer indirect traffic routes	These issues are addressed in Sections 3.14 (Traffic and Circulation), 3.2 (Air Quality), 3.6 (Greenhouse Gas Emissions), and 3.12 (Public Services and Utilities)	
	3/22/2013	IP15	Individual	Transportation	assess year-round, pre-dawn, after dark pedestrian/bicycle access to public transit	?? I don't know what this means	
	3/22/2013	IP15	Individual	Population/Housing	how will this affect jobs/housing balance; where will VMVSP residents work? Will VMV commercial employees be able to live in VMV?	Not a CEQA issue.	
	3/22/2013	IP15	Individual	Air Quality	consider air quality, traffic, GHG, land use consequences of work commutes	Air quality, GHG, and traffic impacts of work commutes are accounted for in the analysis of these issues provided in Sections 3.1, 3.6, and 3.14 , respectively. Land use is addressed in Section 3.9 , Land Use Planning and Agricultural Resources.	
	3/22/2013	IP15	Individual	Design	consider commercial/retail alternative that will reduce out of county travel	Alternatives are address in Chapter 4 .	
	3/22/2013	IP15	Individual	Transportation	traffic speeds, safety of cyclists	Speeds for the model network were based on the posted speed limit.	
	3/22/2013	IP15	Individual	Economic	should assess long-term economic viability, including the effects non vehicular circulations and density of development on economic viability	Not a CEQA issue.	
	3/22/2013	IP15	Individual	Recreation/Park	Re: proposal for a park under foundation control: assess long-term reliability of "foundation" control ensuring public access and preservation.	See zoning and development standards in the Specific Plan. Not an environmental impact.	
	3/22/2013	IP15	Individual	Design	review expanding community region of Cameron park to include VMVSP instead of community region of El Dorado Hills	Not a CEQA issue.	
Price, Stanley	3/22/2013	IP16	Individual	Public Services/Utilities	water supply and sewer	Water supply and sewer availability are addressed in Section 3.12 , Public Services and Utilities (Impact PSU-1, PSU-2, PSU-3, PSU-5, PSU-6)	
	3/22/2013	IP16	Individual	Traffic/Circulation/AQ	review pedestrian/bicycle/trails/vehicle circulation plans to determine if there is good connectivity within project as well as from the project to schools, stores, senior center and Cameron Park	Vehicular and non-vehicular circulation is addressed in Section 3.14 , Traffic and Circulation (Impact TRA-1)	Mitigation Measure TRA-1
	3/22/2013	IP16	Individual	Land Use/Agriculture	review housing element requirements - will this help or hinder where will construction workers live/travel from, VMV employees	A discussion of the general consistency of the proposed project with the policies of the General Plan is presented in Section 3.9 , Land Use Planning and Agricultural Resources Table 3.9-3	
	3/2/2013	IP16	Individual	Land Use/Agriculture	live and transportation options	Not a CEQA issue	
	3/22/2013	IP16	Individual	Tranportation	study transit options for employees and residents	Public transportation for everyone is addressed in Section 3.14 , Traffic and Circulation (Impact TRA-1 and TRA-6).	Mitigation Measure TRA-1 and TRA-6

<u>Party Name</u> (Last name, First name: Agency or Organization name)	<u>Date Received</u>	<u>Party Type/ Letter Number/ Comment Number</u>	<u>Federal, State, Local, Organization, Form, Individual</u>	<u>Comment Topic</u>	<u>Refined Topic</u>	<u>Section</u>	<u>Mitigation (if applicable)</u>
	3/22/2013	IP16	Individual	Economic feasibility	significant density and retail at the end of a cul-de-sac - success of comparable development? Does the plan cause "reduced or increased sales tax leakage from ED County?"	Not a CEQA issue. recreational facilities are discussed in Section 3.13 , Recreation. Proposed trails are shown in the Section 3.14 , Traffic and Circulation, and in the VMVSP, Figure 4.27 shows proposed equestrian trails for both VMV and LRV. It is not within the scope of this project to determine trails off-site.	
	3/22/2013	IP16	Individual	Design/Recreation/Park	suggestion for equestrian trails connecting Sacramento and El Dorado Counties and connection between LRV and CEDH	The project area is adjacent to the El Dorado Hills CSD. Impacts related to recreational facilities are discussed in Section 3.13 , Recreation.	
	3/22/2013	IP16	Individual	Population/Housing	where will residents go for recreational facilities? Review which Community Services District this will go under		
	3/22/2013	IP16	Individual	Utilities	what area code is appropriate? 916 or 530?	Not a CEQA issue	
Stanfel, Linda	3/22/2013	IP17	Individual	Haz/Mat, AQ	NOA concerns	NOA is addressed in Section 3.2 , Air Quality (Impact AQ-4)	Mitigation Measure AQ-4a
	3/22/2013	IP17	Individual	Fire Safety/Traffic	a need for more than 2 exits, people will gridlock during fire and put others in danger. 	3/27/2013	PA02	State	Transportation	encroachment permit required if work encroaches on State ROW	Comment noted	

Consistency with El Dorado County General Plan Policies

	Policy Numbers	Policy	Project Consistency
LAND USE ELEMENT			
Goal 2.1: Land Use			
Objective 2.1.1: Community Regions			
	2.1.1.1	The Communities within the County are identified as: Camino/Pollock Pines, El Dorado Hills, Cameron Park, El Dorado, Diamond Springs, Shingle Springs, and the City of Placerville and immediate surroundings.	The project site is proposed to be included in the El Dorado Hills Community Region.
	2.1.1.2	Establish Community Regions to define those areas which are appropriate for the highest intensity of self-sustaining compact urban-type development or suburban type development within the County based on the municipal spheres of influence, availability of infrastructure, public services, major transportation corridors and travel patterns, the location of major topographic patterns and features, and the ability to provide and maintain appropriate transitions at Community Region boundaries. These boundaries shall be shown on the General Plan land use map.	The project site is proposed to be included in the El Dorado Hills Community Region. Availability of infrastructure and public services is addressed in Section 3.12, and the availability of access to major transportation corridors is addressed in Section 3.14.
	2.1.1.3	Mixed use developments which combine commercial and residential uses in a single project are permissible and encouraged within Community Regions. Within Community Regions, the mixed-uses may occur vertically and/or horizontally. In mixed use projects, the maximum residential density shall be 16 dwelling units per acre within Community Regions. The residential component of a mixed-use project may include a full range of single and/or multi-family design concepts. The maximum residential density of 20 dwelling units per acre may only be achieved where adequate infrastructure, such as water, sewer and roadway are available or can be provided concurrent with development.	The proposed project includes a mix of residential, commercial, and public uses. Proposed residential densities range from 0.9 to 24 Du/acre. Average residential density proposed is just under 4 Du/acre. The proposed Specific Plan is consistent with this policy.
	2.1.1.4	Community Region boundaries shall generally be coterminous with the Sphere of Influence boundaries of incorporated cities. Community Region boundaries may extend beyond a city’s sphere of influence to recognize existing and anticipated development patterns consistent with that of Community Regions. However, cities should be encouraged to expand their sphere of influence to be contiguous with Community Region boundaries.	The project site is not located near a city, however, the El Dorado Hills Community Region is an existing Community Region.
	2.1.1.6	The boundaries of existing Community Regions may be modified through the General Plan amendment process.	A general plan amendment to modify the boundaries of the El Dorado Hills Community Region is a part of the proposed project.
	2.1.1.7	Development within Community Regions, as with development elsewhere in the County, may proceed only in accordance with all applicable General Plan Policies, including those regarding infrastructure availability as set forth in the Transportation and Circulation and the Public Services and Utilities Elements. Accordingly, development in Community Regions and elsewhere will be limited in some cases until such time as adequate roadways, utilities, and other public service infrastructure become available and wildfire hazards are mitigated as required by an approved Fire Safe Plan.	The proposed project includes a Specific Plan with a plan for provision of infrastructure and public services and preparation of a Wildfire Safety Plan.
Objective 2.2.5: General Policy Section			
	2.2.5.21	Development projects shall be located and designed in a manner that avoids incompatibility with adjoining land uses that are permitted by the policies in effect at the time the development project is proposed. Development projects that are potentially incompatible with existing adjoining uses shall be designed in a manner that avoids any incompatibility or shall be located on a different site.	The proposed project has been designed with buffer areas designated as open space where adjacent to low density or open space uses, with the exception of areas where the proposed land uses are the same as adjacent land use designations—on the north and northeast edges of the project site. For these reasons, the proposed Specific Plan is consistent with this policy.
Goal 2.3: Natural Landscape Features			
Objective 2.3.2: Hillsides and Ridgelines			
	2.3.2.1	Disturbance of slopes thirty (30) percent or greater shall be discouraged to minimize the visual impacts of grading and vegetation removal.	The proposed Specific Plan restricts development on slopes greater than thirty (30) percent through designating these areas for open space, and therefore is consistent with this policy.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
Goal 2.4: Existing Community Identity		
Objective 2.4.1: Community Identity		
2.4.1.4	Strip commercial development shall be precluded in favor of clustered contiguous facilities. Existing strip commercial areas shall be developed with common and continuous landscaping along the street frontage, shall utilize common driveways, and accommodate parcel-to-parcel internal automobile and non-automobile circulation where possible.	The proposed Specific Plan provides for clustered commercial development. The proposed Specific Plan is consistent with this policy.
Goal 2.5: Community Identity		
Objective 2.5.1: Physical and Visual Separation		
2.5.1.1	Low intensity land uses shall be incorporated into new development projects to provide for the physical and visual separation of communities. Low intensity land uses may include any one or a combination of the following: parks and natural open space areas, special setbacks, parkways, landscaped roadway buffers, natural landscape features, and transitional development densities.	The proposed Specific Plan includes open space, parks, natural landscape features and landscaped roadway buffers. The proposed Specific Plan is consistent with this policy.
2.5.1.2	Greenbelts or other means of community separation shall be included within a specific plan and may include any of the following: preserved open space, parks, agricultural districts, wildlife habitat, rare plant preserves, riparian corridors, and designated Natural Resource areas.	The proposed project includes green belt buffers in the form of open space areas between uses and around the east, west and south edges of the project site. The proposed Specific Plan is consistent with this policy.
Objective 2.5.2: Commercial Facilities		
2.5.2.1	<p>Neighborhood commercial centers shall be oriented to serve the needs of the surrounding area, grouped as a clustered, contiguous center where possible, and should incorporate but not be limited to the following design concepts as further defined in the Zoning Ordinance:</p> <ul style="list-style-type: none"> • Maximum first floor building size should be sized to be suitable for the site; • Residential use on second story; • No outdoor sales or automotive repair facilities; • Reduced setback with landscaping and walkways; • Interior parking, or the use of parking structure; • Bicycle access with safe and convenient bicycle storage area; • On-street parking to reduce the amount of on-site parking; • Community bulletin boards/computer kiosks; • Outdoor artwork, statues, etc., in prominent places; and • Pedestrian circulation to adjacent commercial centers. 	The proposed Specific Plan provides a village commercial center that is centrally located relative to residential development. The proposed Specific Plan is consistent with this policy.
Goal 2.6: Corridor Viewsheds		
Objective 2.6.1: Scenic Corridor Identification		
2.6.1.5	All development on ridgelines shall be reviewed by the County for potential impacts on visual resources. Visual impacts will be assessed and may require methods such as setbacks, screening, low-glare or directed lighting, automatic light shutoffs, and external color schemes that blend with the surroundings in order to avoid visual breaks to the skyline.	The proposed Specific Plan restricts development on ridgelines through designating these areas for open space. An evaluation consistent with this policy is addressed in Section 3.1, <i>Aesthetics</i> , where a significant and unavoidable impact on scenic vistas is identified. Additionally, design review is required by the Specific Plan.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
2.6.1.6	A Scenic Corridor (-SC) Combining Zone District shall be applied to all lands within an identified scenic corridor. Community participation shall be encouraged in identifying those corridors and developing the regulations.	As discussed in Section 3.1, <i>Aesthetics</i> , as shown on Figure 3.1-1, a portion of US 50 passing near the project site is considered a scenic corridor by the County for its views of Marble Valley; however, no portion of Marble Valley has been designated a scenic corridor. The Specific Plan applies an open space zone to the Highway 50 Scenic Corridor (Parcel 11 B), which implements this policy. Consistency with this policy is addressed in Section 3.1, <i>Aesthetics</i> , Impact AES-3.
Goal 2.8: Lighting		
Objective 2.8.1: Lighting Standards		
2.8.1.1	Development shall limit excess nighttime light and glare from parking area lighting, signage, and buildings. Consideration will be given to design features, namely directional shielding for street lighting, parking lot lighting, sport field lighting, and other significant light sources, that could reduce effects from nighttime lighting. In addition, consideration will be given to the use of automatic shutoffs or motion sensors for lighting features in rural areas to further reduce excess nighttime light.	The proposed Specific Plan Design Guidelines limit excess nighttime light and glare from parking areas, signage, and buildings. Specific Plan policies 5.7, 6.20, 7.18, 9.20 and 9.21 address street lighting and lighting in public/common areas. The proposed Specific Plan is consistent with these policies.
TRANSPORTATION & CIRCULATION ELEMENT		
Roads and Highways		
Goal TC-1: To plan for and provide a unified, coordinated, and cost-efficient countywide road and highway system that ensures the safe, orderly, and efficient movement of people and goods.		
TC-1r	The County shall accept classified roads, as defined on Figure TC-1, into the County-maintained road system when constructed to County standards.	The proposed Specific Plan includes a definition of which roads will be County maintained and which roads will be maintained by the Homeowners Association. The proposed Specific Plan is consistent with this policy.
TC-1s	Notwithstanding Policy TC-1r, the County shall only add new local roads into the existing County-maintained road system if maintenance for these local roads will be provided for through a County Service Area Zone of Benefit or other similar means acceptable to the Board of Supervisors.	The proposed project includes a Specific Plan with a plan for provision of and funding for infrastructure and public services. The proposed Specific Plan is consistent with this policy.
Levels of Service and Concurrency		
Goal TC-X: To coordinate planning and implementation of roadway improvements with new development to maintain adequate levels of service on County roads.		

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
TC-Xa	<p>Except as otherwise provided, the following TC-Xa policies shall remain in effect indefinitely, unless amended by voters:</p> <ol style="list-style-type: none"> 1. Traffic from residential development projects of five or more units or parcels of land shall not result in, or worsen, Level of Service F (gridlock, stop-and-go) traffic congestion during weekday, peak-hour periods on any highway, road, interchange or intersection in the unincorporated areas of the county. 2. The County shall not add any additional segments of U.S. Highway 50, or any other highways and roads, to the County’s list of roads from the original Table TC-2 of the 2004 General Plan that are allowed to operate at Level of Service F without first getting the voters’ approval. 3. intentionally blank (Resolution 125-2019, August 6, 2019) 4. intentionally blank (Resolution 159-2017, October 24, 2017) 5. The County shall not create an Infrastructure Financing District unless allowed by a 2/3rds majority vote of the people within that district. 6. intentionally blank (Resolution 159-2017, October 24, 2017) 7. Before giving approval of any kind to a residential development project of five or more units or parcels of land, the County shall make a finding that the project complies with the policies above. If this finding cannot be made, then the County shall not approve the project in order to protect the public’s health and safety as provided by state law to assure that safe and adequate roads and highways are in place as such development occurs. 	<p>Consistency with these policies is addressed in Section 3.14, <i>Transportation and Circulation</i>, Impacts TRA-1, TRA-2, and mitigation measures TRA-1 and TRA-2. Specific Plan policy 4.5 requires that the development of the plan area be consistent with this policy.</p>
TC-Xd	<p>Level of Service (LOS) for County-maintained roads and state highways within the unincorporated areas of the county shall not be worse than LOS E in the Community Regions or LOS D in the Rural Centers and Rural Regions except as specified in Table TC-2. The volume to capacity ratio of the roadway segments listed in Table TC-2 shall not exceed the ratio specified in that table. Level of Service will be as defined in the latest edition of the Highway Capacity Manual (Transportation Research Board, National Research Council) and calculated using the methodologies contained in that manual. Analysis periods shall be based on the professional judgment of the Department of Transportation which shall consider periods including, but not limited to, Weekday Average Daily Traffic (ADT), AM Peak Hour, and PM Peak hour traffic volumes.</p>	<p>LOS is no longer analyzed under CEQA for determining traffic impacts.</p>
TC-Xe	<p>For the purposes of this Transportation and Circulation Element, “worsen” is defined as any of the following number of project trips using a road facility at the time of issuance of a use and occupancy permit for the development project:</p> <ol style="list-style-type: none"> A. A 2 percent increase in traffic during the a.m. peak hour, p.m. peak hour, or daily, or B. The addition of 100 or more daily trips, or C. The addition of 10 or more trips during the a.m. peak hour or the p.m. peak hour. 	<p>Consistency with this policy is addressed in Section 3.14, <i>Transportation and Circulation</i>, Impact TRA-2, and mitigation measure TRA-2. Specific Plan policy 4.5 requires that the development of the plan area be consistent with this policy.</p>
TC-Xf	<p>At the time of approval of a tentative map for a single family residential subdivision of five or more parcels that worsens (defined as a project that triggers Policy TC-Xe [A] or [B] or [C]) traffic on the County road system, the County shall do one of the following: (1) condition the project to construct all road improvements necessary to maintain or attain Level of Service standards detailed in this Transportation and Circulation Element based on existing traffic plus traffic generated from the development plus forecasted traffic growth at 10-years from project submittal; or (2) ensure the commencement of construction of the necessary road improvements are included in the County’s 10-year CIP.</p> <p>For all other discretionary projects that worsen (defined as a project that triggers Policy TC-Xe [A] or [B] or [C]) traffic on the County road system, the County shall do one of the following: (1) condition the project to construct all road improvements necessary to maintain or attain Level of Service standards detailed in this Transportation and Circulation Element; or (2) ensure the construction of the necessary road improvements are included in the County’s 20-year CIP.</p>	<p>LOS is no longer analyzed under CEQA for determining traffic impacts.</p>
TC-Xg	<p>Each development project shall dedicate right-of-way, design and construct or fund any improvements necessary to mitigate the effects of traffic from the project. The County shall require an analysis of impacts of traffic from the development project, including impacts from truck traffic, and require dedication of needed right-of-way and construction of road facilities as a condition of the development. This policy shall remain in effect indefinitely unless amended by voters.</p>	<p>Consistency with this policy is addressed in Section 3.14, <i>Transportation and Circulation</i>, Impacts TRA-1, TRA-2, and mitigation measures TRA-1 and TRA-2. Specific Plan policy 4.5 requires that the development of the plan area be consistent with this policy.</p>

Transportation Systems Management
 Goal TC-3: To reduce travel demand on the County’s road system and maximize the operating efficiency of transportation facilities, thereby reducing the quantity of motor vehicle emissions and the amount of investment required in new or expanded facilities.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
TC-3c	The County shall encourage new development within Community Regions and Rural Centers to provide appropriate on-site facilities that encourage employees to use alternative transportation modes. The type of facilities may include bicycle parking, shower and locker facilities, and convenient access to transit, depending on the development size and location.	Specific Plan policies 4.1, 4.2, 4.3, 4.6, 5.16, 7.4, and 7.7 accommodate and encourage the use of alternate forms of transportation, including public transit, walking, and bicycling. Consistency with these policies is addressed in Section 3.14, <i>Transportation and Circulation</i> , Impact TRA-1. The proposed Specific Plan is consistent with this policy.
Non-motorized Transportation		
Goal TC-4: To provide a safe, continuous, and easily accessible non-motorized transportation system that facilitates the use of the viable alternative transportation modes.		
TC-4h	Where hiking and equestrian trails abut public roads, they should be separated from the travel lanes whenever possible by curbs and barriers (such as fences or rails), landscape buffering, and spatial distance. Existing public corridors such as power transmission line easements, railroad rights-of-way, irrigation district easements, and roads should be put to multiple use for trails, where possible.	The proposed Specific Plan includes a comprehensive bikeway and trail system separated from roadways. If Lime Rock Valley Specific Plan is also developed, the trail system will connect with the El Dorado Trail to Bass Lake Road. The proposed Specific Plan is consistent with this policy.
TC-4i	Within Community Regions and Rural Centers, all development shall include pedestrian/bike paths connecting to adjacent development and to schools, parks, commercial areas and other facilities where feasible. In Rural Regions, pedestrian/bike paths shall be considered as appropriate.	The proposed Specific Plan includes a comprehensive bikeway and trail system connecting the different land uses within the project site. Specific Plan policies 4.1, 4.6, 5.16, 7.1, 7.4, and 7.13 address connecting development to schools and commercial areas with bicycle and pedestrian paths. The proposed Specific Plan is consistent with this policy.
Goal TC-5: To provide safe, continuous, and accessible sidewalks and pedestrian facilities as a viable alternative transportation mode.		
TC-5a	Sidewalks and curbs shall be required throughout residential subdivisions, including land divisions created through the parcel map process, where any residential lot or parcel size is 10,000 square feet or less.	The proposed Specific Plan residential roadway sections include sidewalks and curbs. The proposed Specific Plan is consistent with this policy.
TC-5b	In commercial and research and development subdivisions, curbs and sidewalks shall be required on all roads. Sidewalks in industrial subdivisions may be required as appropriate.	The proposed Specific Plan commercial roadway sections include sidewalks and curbs. The proposed Specific Plan is consistent with this policy.
TC-5c	Roads adjacent to schools or parks shall have curbs and sidewalks.	The proposed Specific Plan roadway sections adjacent to schools and parks include sidewalks and curbs. The proposed Specific Plan is consistent with this policy.

HOUSING ELEMENT

General Housing Policies

Goal HO-1: To provide for housing that meets the needs of existing and future residents in all income categories.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
HO-1.1	When adopting or updating programs, procedures, or Specific Plans or other planning documents, the County shall ensure that the goals, policies, and implementation programs are developed with the consideration of achieving and maintaining the County’s regional housing allocation.	The proposed Specific Plan includes Village Residential-High development which helps to meet County RHNA goals. The proposed Specific Plan is consistent with this policy.
HO-1.5	The County shall direct higher density residential development to Community Regions and Rural Centers.	The proposed Specific Plan includes higher density residential development. The project site is proposed to be included in the El Dorado Hills Community Region. Consistency with this policy is addressed in Section 3.9, <i>Land Use Planning and Agricultural Resources</i> , Impact LU-2.
HO-1.24	The County shall encourage 2nd Dwelling Units to provide housing that is affordable to very low, low and moderate income households.	Second dwelling units are allowed in the proposed Specific Plan. The proposed Specific Plan is consistent with this policy.
Goal HO-5: To increase the efficiency of energy and water use in new and existing homes.		
HO-5.1	The County shall require all new dwelling units to meet current state requirements for energy efficiency and shall encourage the retrofitting of existing units.	The Specific Plan includes policies related to energy efficiency (Specific Plan policies 9.11, 9.12, 9.13, 9.14, 9.15, 9.16, 9.18, 9.19, 9.20, 9.21, 9.22, and 9.23). The proposed Specific Plan is consistent with this policy.
PUBLIC SERVICES & UTILITIES ELEMENT		
Goal 5.1: Provision of Public Services		
Objective 5.1.2: Concurrency		
5.1.2.1	Prior to the approval of any discretionary development, the approving authority shall make a determination of the adequacy of the public services and utilities to be impacted by that development. Where, according to the purveyor responsible for the service or utility as provided in Table 5-1, demand is determined to exceed capacity, the approval of the development shall be conditioned to require expansion of the impacted facility or service to be available concurrent with the demand, mitigated, or a finding made that a CIP project is funded and authorized which will increase service capacity.	The impact analyses in Section 3.12, <i>Public Services and Utilities</i> , presents information supporting the type of finding required by this policy. The proposed Specific Plan is consistent with this policy.
5.1.2.2	Provision of public services to new discretionary development shall not result in a reduction of service below minimum established standards to current users, pursuant to Table 5-1.	The impact analyses in Section 3.12, <i>Public Services and Utilities</i> , presents information supporting the type of finding required by this policy. The proposed Specific Plan is consistent with this policy.
Goal 5.2: Water Supply		
Objective 5.2.1: County-wide Water Resources Program		
5.2.1.2	An adequate quantity and quality of water for all uses, including fire protection, shall be provided for with discretionary development.	A Water Supply Assessment was prepared for the proposed Specific Plan. The conclusion of the Water Supply Assessment was that water would be available as required. More information is provided in Section 3.12, <i>Public Services and Utilities</i> , Impact PSU-4. The proposed Specific Plan is consistent with this policy.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
5.2.1.3	All medium-density residential, high-density residential, multifamily residential, commercial, industrial and research and development projects shall be required to connect to public water systems when located within Community Regions and to either a public water system or to an approved private water systems in Rural Centers.	The proposed project is proposed to be connected to a public water system and served by the El Dorado Irrigation District. The proposed Specific Plan is consistent with this policy.
5.2.1.4	Rezoning and subdivision approvals in Community Regions or other areas dependent on public water supply shall be subject to the availability of a permanent and reliable water supply.	A Water Supply Assessment was prepared for the proposed Specific Plan. The conclusion of the Water Supply Assessment was that water would be available as required. More information is provided in Section 3.12, <i>Public Services and Utilities</i> , Impact PSU-4. The proposed Specific Plan is consistent with this policy.
5.2.1.6	Priority shall be given to discretionary developments that are infill or where there is an efficient expansion of the water supply delivery system.	The project site is already approved for development. The proposed Specific Plan is consistent with this policy.
5.2.1.9	In an area served by a public water purveyor or an approved private water system, the applicant for a tentative map or for a building permit on a parcel that has not previously complied with this requirement must provide a Water Supply Assessment that contains the information that would be required if a water supply assessment were prepared pursuant to Water Code section 10910. In order to approve the tentative map or building permit for which the assessment was prepared the County must (a) find that by the time the first grading or building permit is issued in connection with the approval, the water supply from existing water supply facilities will be adequate to meet the highest projected demand associated with the approval on the lands in question; and (b) require that before the first grading permit or building permit is issued in connection with the approval, the applicant will have received a sufficient water meters or a comparable supply guarantee to provide adequate water supply to meet the projected demand associated with the entire approval. A water supply is adequate if the total entitled water supplies available during normal, single, dry, and multiple dry years within a 20-year projection will meet the highest projected demand associated with the approval, in addition to existing and 20-year projected future uses within the area served by the water supplier, including but not limited to, fire protection, agricultural, and industrial uses, 95% of the time, with cutbacks calculated not to exceed 20% in the remaining 5% of the time.	A Water Supply Assessment was prepared for the proposed Specific Plan. The conclusion of the Water Supply Assessment was that water would be available as required. More information is provided in Section 3.12, <i>Public Services and Utilities</i> , Impact PSU-4. The proposed Specific Plan is consistent with this policy.
5.2.1.11	The County shall direct new development to areas where public water service already exists. In Community Regions, all new development shall connect to a public water system. In Rural Centers, all new development shall connect either to a public water system or to an approved private water system.	The proposed project is proposed to be connected to a public water system. The proposed Specific Plan is consistent with this policy.
5.2.1.12	The County shall work with the El Dorado Irrigation District (EID) to support the continued and expanded use of recycled water, including wet-season use and storage, in new subdivisions served by the Deer Creek and El Dorado Hills Wastewater Treatment Plants. To avoid the construction impacts of installing recycled water facilities, the County shall encourage the construction of distribution lines at the same time as other utilities are installed. Facilities to consider are recycled water lines for residential landscaping, parks, schools, and other irrigation needs, and if feasible, wet-irrigation-season storage facilities.	The project may use recycled water. Consistency with this policy is addressed in Section 3.12, <i>Public Services and Utilities</i> , Impact PSU-4. The proposed Specific Plan is consistent with this policy.
Goal 5.3: Wastewater Collection and Treatment		
Objective 5.3.1: Wastewater Capacity		
5.3.1.1	High-density and multifamily residential, commercial, and industrial projects may be required to connect to public wastewater collection facilities if reasonably available as a condition of approval. In the Rural Centers of Camino/Cedar Grove/Pollock Pines, the long term development of public sewer service shall be encouraged.	The project is proposed to be served by a public wastewater system. The proposed Specific Plan is consistent with this policy.
5.3.1.7	In Community Regions, all new development shall connect to public wastewater treatment facilities. In Community Regions where public wastewater collection facilities do not exist project applicants must demonstrate that the proposed wastewater disposal system can accommodate the highest possible demand of the project.	The project as proposed includes an extension of the El Dorado Hills Community Region and the plan area would be served by a public wastewater system. The proposed Specific Plan is consistent with this policy.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
Goal 5.4: Storm Drainage		
Objective 5.4.1: Drainage and Flood Management Program		
5.4.1.1	Require storm drainage systems for discretionary development that protect public health and safety, preserve natural resources, prevent erosion of adjacent and downstream lands, prevent the increase in potential for flood hazard or damage on either adjacent, upstream or downstream properties, minimize impacts to existing facilities, meet the National Pollution Discharge Elimination System (NPDES) requirements, and preserve natural resources such as wetlands and riparian areas.	The Specific Plan includes policies related to water quality and storm drainage systems (Specific Plan policies 6.3, 6.4, 6.6, 8.5, 8.6, 8.7, 8.8, and 9.48). The proposed Specific Plan is consistent with this policy.
5.4.1.2	Discretionary development shall protect natural drainage patterns, minimize erosion, and ensure existing facilities are not adversely impacted while retaining the aesthetic qualities of the drainage way.	The Specific Plan includes policies related to drainage and erosion (Specific Plan policies 6.3, 6.6, 9.48). The proposed Specific Plan is consistent with this policy.
Goal 5.5 Solid Waste		
Objective 5.5.2: Recycling, Transformation, and Disposal Facilities		
5.5.2.1	Concurrent with the approval of new development, evidence will be required that capacity exists within the solid waste system for the processing, recycling, transformation, and disposal of solid waste.	As described in detail in Section 3.12, <i>Public Services and Utilities</i> , Impact PSU-6, capacity exists to serve the proposed project. The proposed Specific Plan is consistent with this policy.
Goal 5.6: Gas, Electric, and Other Utility Services		
Objective 5.6.1: Provide Utility Services		
5.6.1.1	Promote and coordinate efforts with utilities for the undergrounding of existing and new utility distribution lines in accordance with current rules and regulations of the California Public Utility Commission and existing overhead power lines within scenic areas and existing Community Regions and Rural Centers.	The proposed Specific Plan requires that all utility distribution lines be located underground and therefore, is consistent with this policy.
5.6.1.2	Reserve adequate rights-of-way to facilitate expansion of services in a timely manner.	Irrevocable offers of dedication of right-of-way will be offered to the County after the proposed Specific Plan is approved. The Specific Plan is consistent with this policy.
Objective 5.6.2: Encourage Energy-Efficient Development		
5.6.2.1	Require energy conserving landscaping plans for all projects requiring design review or other discretionary approval.	To save energy and water, the proposed Specific Plan requires the use of drought tolerant landscaping (Specific Plan policy 9.44). The Specific Plan is consistent with this policy.
5.6.2.2	All new subdivisions should include design components that take advantage of passive or natural summer cooling and/or winter solar access, or both, when possible.	The proposed Specific Plan encourages passive natural summer cooling and winter solar access, or both, when feasible (Specific Plan policies 9.12, 9.13, 9.14, 9.18, and 9.22). The Specific Plan is consistent with this policy.
Goal 5.7: Emergency Services		
Objective 5.7.1: Fire Protection (Community Regions)		
5.7.1.1	Prior to approval of new development, the applicant will be required to demonstrate that adequate emergency water supply, storage, conveyance facilities, and access for fire protection either are or will be provided concurrent with development.	The Specific Plan addresses this requirement in policy 7.25 and is consistent with this policy.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
Objective 5.7.3: Law Enforcement		
5.7.3.1	Prior to approval of new development, the Sheriff’s Department shall be requested to review all applications to determine the ability of the department to provide protection services. The ability to provide protection to existing development shall not be reduced below acceptable levels as a consequence of new development. Recommendations such as the need for additional equipment, facilities, and adequate access may be incorporated as conditions of approval.	Section 3.12, <i>Public Services and Utilities</i> presents information on the Sheriff’s department review of the ability to provide protection services. Impact PSU-1 notes that the project will not reduce protection levels. The proposed Specific Plan is consistent with this policy.
Objective 5.7.4: Medical Emergency Services		
5.7.4.1	Prior to approval of new development, the applicant shall be required to demonstrate that adequate medical emergency services are available and that adequate emergency vehicle access will be provided concurrent with development.	Section 3.12, <i>Public Services and Utilities</i> , Impact PSU-1, presents information regarding the adequacy of emergency services. Specific Plan policies 4.2, 4.3, 4.4 and 4.5 address emergency vehicle access. The proposed Specific Plan is consistent with this policy.
5.7.4.2	Prior to approval of new development, the Emergency Medical Services Agency shall be requested to review all applications to determine the ability of the department to provide protection services. The ability to provide protection to existing development shall not be reduced below acceptable levels as a consequence of new development. Recommendations such as the need for additional equipment, facilities, and adequate access may be incorporated as conditions of approval.	Section 3.12, <i>Public Services and Utilities</i> , Impact PSU-1, presents information regarding the adequacy of emergency services. Specific Plan policy 7.25 requires that the fire department review maps prior to County approval. The proposed Specific Plan is consistent with this policy.
Goal 5.8: School Services		
Objective 5.8.1: School Capacity		
5.8.1.1	School districts affected by a proposed development shall be relied on to evaluate the development’s adverse impacts on school facilities or the demand therefor. No development that will result in such impacts shall be approved unless: 1. To the extent allowed by State law, the applicant and the appropriate school district(s) have entered into a written agreement regarding the mitigation of impacts to school facilities; or 2. The impacts to school facilities resulting from the development are mitigated, through conditions of approval, to the greatest extent allowed by State law.	Impacts to school facilities are discussed in Section 3.12, <i>Public Services and Utilities</i> , Impact PSU-1. The proposed Specific Plan is consistent with this policy.
5.8.1.3	Whenever feasible, develop joint (shared) school facilities, recreational facilities, and educational and service programs between school districts and other public agencies.	The proposed Specific Plan provides two school sites with adjacent public park sites, consistent with this policy.
Objective 5.8.2: Land for School Facilities		
5.8.2.1	Where feasible, elementary schools shall be centrally located within the communities they serve.	The proposed Specific Plan designates two school sites in the Plan Area consistent with this policy.
Objective 5.8.3: Child and Other Care and Day Care Programs		
5.8.3.1	Child day care facilities shall be allowed by right in commercial/office projects, in multiple family housing developments, in mixed use developments in specific plans, in employment centers, and near transit facilities.	The proposed Specific Plan allows child day care facilities by right. The proposed Specific Plan is consistent with this policy.

PUBLIC HEALTH, SAFETY & NOISE ELEMENT

Goal 6.2: Fire Hazards

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
Objective 6.2.2: Limitations to Development		
6.2.2.1	Fire Hazard Severity Zone Maps shall be consulted in the review of all projects so that standards and mitigation measures appropriate to each hazard classification can be applied. Land use densities and intensities shall be determined by mitigation measures in areas designated as high or very high fire hazard.	The project site is located within designated high and very high fire hazard severity zones. Consistency with this policy is addressed in Section 3.7, <i>Hazards and Hazardous Materials</i> , Impact HAZ-8. Specific Plan policies 7.25 and 6.47 address fire safety.
6.2.2.2	The County shall preclude development in areas of high and very high wildland fire hazard or in areas identified as wildland-urban interface (WUI) communities within the vicinity of Federal lands that are a high risk for wildfire, as listed in the Federal Register Executive Order 13728 of May 18, 2016, unless such development can be adequately protected from wildland fire hazard, as demonstrated in a WUI Fire Safe Plan prepared by a qualified professional as approved by the El Dorado County Fire Prevention Officers Association. The WUI Fire Safe Plan shall be approved by the local Fire Protection District having jurisdiction and/or California Department of Forestry and Fire Protection. (Resolution 124-2019, August 6, 2019)	The project site is located within designated high and very high fire hazard severity zones. Consistency with this policy is addressed in Section 3.7, <i>Hazards and Hazardous Materials</i> . VMVSP Policy 6.47 requires that prior to submittal of the first small lot tentative subdivision map, CAL FIRE will review and approve a Wildfire Safety Plan.
Objective 6.2.3: Adequate Fire Protection		
6.2.3.1	As a requirement for approving new development, the County must find, based on information provided by the applicant and the responsible fire protection district that, concurrent with development, adequate emergency water flow, fire access, and firefighting personnel and equipment will be available in accordance with applicable State and local fire district standards.	The proposed Specific Plan is consistent with this policy; a discussion is provided in Section 3.7, <i>Hazards and Hazardous Materials</i> , impact HAZ-8 and in Section 3.12, <i>Public Services and Utilities</i> , Impact PSU-1.
6.2.3.2	As a requirement of new development, the applicant must demonstrate that adequate access exists, or can be provided to ensure that emergency vehicles can access the site and private vehicles can evacuate the area.	The proposed Specific Plan is consistent with this policy; a discussion is provided in Section 3.7, <i>Hazards and Hazardous Materials</i> , impact HAZ-7. The proposed Specific Plan circulation system provides adequate access for emergency vehicles.
6.2.3.4	All new development and public works projects shall be consistent with applicable State Wildland Fire Standards and other relevant State and federal fire requirements.	The proposed Specific Plan is consistent with this policy; a discussion is provided in Section 3.7, <i>Hazards and Hazardous Materials</i> , Impact HAZ-8.
Objective 6.2.4: Area-wide Fuel Management Program		
6.2.4.1	Discretionary development within high and very high fire hazard areas shall be conditioned to designate fuel break zones that comply with fire safe requirements to benefit the new and, where possible, existing development.	The proposed Specific Plan is consistent with this policy; a discussion is provided in Section 3.7, <i>Hazards and Hazardous Materials</i> , Impact HAZ-8.
6.2.4.2	The County shall cooperate with the California Department of Forestry and Fire Protection and local fire protection districts to identify opportunities for fuel breaks in zones of high and very high fire hazard either prior to or as a component of project review.	The proposed Specific Plan is consistent with this policy; a discussion is provided in Section 3.7, <i>Hazards and Hazardous Materials</i> , Impact HAZ-8.
Goal 6.3: Geologic and Seismic Hazards		
Objective 6.3.1: Building and Site Standards		

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
6.3.1.1	The County shall require that all discretionary projects and all projects requiring a grading permit, or a building permit that would result in earth disturbance, that are located in areas likely to contain naturally occurring asbestos (based on mapping developed by the California Department of Conservation [DOC]) have a California-registered geologist knowledgeable about asbestos-containing formations inspect the project area for the presence of asbestos using appropriate test methods. The County shall amend the Erosion and Sediment Control Ordinance to include a section that addresses the reduction of thresholds to an appropriate level for grading permits in areas likely to contain naturally occurring asbestos (based on mapping developed by the DOC). The Department of Transportation and the County Air Quality Management District shall consider the requirement of posting a warning sign at the work site in areas likely to contain naturally occurring asbestos based on the mapping developed by the DOC.	The proposed Specific Plan area has been inspected by a California registered geologist to determine if asbestos containing soils are present on the site. Specific Plan policy 6.1 addresses NOA. Consistency with this policy is addressed in Section 3.2, <i>Air Quality</i> , Impact AQ-3b and mitigation measure AQ-3a and Section 3.7, <i>Hazards and Hazardous Materials</i> , Impact HAZ-2. The proposed Specific Plan is consistent with this policy.
Objective 6.3.2: County-wide Seismic Hazards		
6.3.2.5	Applications for development of habitable structures shall be reviewed for potential hazards associated with steep or unstable slopes, areas susceptible to high erosion, and avalanche risk. Geotechnical studies shall be required when development may be subject to geological hazards. If hazards are identified, applicants shall be required to mitigate or avoid identified hazards as a condition of approval. If no mitigation is feasible, the project will not be approved.	The proposed Specific Plan is consistent with this policy; a discussion is provided in Section 3.5, <i>Geology, Soils, Minerals, and Paleontological Resources</i> , Impacts GEO-1, GEO-2, GEO-3, GEO-4, and GEO-5.
Goal 6.4: Flood Hazards		
Objective 6.4.1: Development Regulations		
6.4.1.3	No new critical or high occupancy structures (e.g., schools, hospitals) shall be located in the 100-year floodplain of any river, stream, or other body of water.	The proposed project does not include any 100-year flood hazard areas, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map, as discussed in Section 3.8, <i>Hydrology, Water Quality, and Water Resources</i> , Impact WQ-3ii, WQ-3iv, WQ-4, and WQ-6.
6.4.1.4	Creation of new parcels which lie entirely within the 100-year floodplain as identified on the most current version of the flood insurance rate maps provided by FEMA or dam failure inundation areas as delineated in dam failure emergency response plans maintained by the County shall be prohibited.	The proposed Specific Plan is consistent with this policy; a discussion of floodplains and dam failure can be found in Section 3.8, <i>Hydrology, Water Quality, and Water Resources</i> , Impacts WQ-3iv and WQ-6.
6.4.1.5	New parcels which are partially within the 100-year floodplain or dam failure inundation areas as delineated in dam failure emergency response plans maintained by the County must have sufficient land available outside the FEMA or County designated 100-year floodplain or the dam inundation areas for construction of dwelling units, accessory structures, and septic systems. Discretionary applications shall be required to determine the location of the designated 100-year floodplain and identified dam failure inundation areas on the subject property.	The proposed Specific Plan is consistent with this policy; a discussion is provided in Section 3.8, <i>Hydrology, Water Quality, and Water Resources</i> , Impacts WQ-3iv and WQ-6.
Objective 6.4.2: Dam Failure Inundation		
6.4.2.1	Apply a zoning overlay for areas located within dam failure inundation zones as identified by the State Department of Water Resources Division of Safety of Dams.	A small reach of Deer Creek where it enters the project site from the northeast is within this potential inundation area. The area that could be inundated is proposed to remain as undeveloped open space. Reference Section 3.8, <i>Hydrology, Water Quality, and Water Resources</i> , Impact WQ-3iv.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
6.4.2.2	No new critical or high occupancy structures (e.g., schools, hospitals) should be located within the inundation area resulting from failure of dams identified by the State Department of Water Resources Division of Safety of Dams.	A small reach of Deer Creek where it enters the project site from the northeast is within this potential inundation area. The area that could be inundated is proposed to remain as undeveloped open space. Reference Section 3.8, Hydrology, <i>Water Quality, and Water Resources</i> , Impact WQ-3iv.
Goal 6.5: Acceptable Noise Levels		
Objective 6.5.1: Protection of Noise-Sensitive Development		
6.5.1.1	Where noise-sensitive land uses are proposed in areas exposed to existing or projected exterior noise levels exceeding the levels specified in Table 6-1 or the performance standards of Table 6-2, an acoustical analysis shall be required as part of the environmental review process so that noise mitigation may be included in the project design.	Noise mitigation design is addressed in Section 3.10, <i>Noise</i> , Impacts NOI-1a and NOI-1b. Implementation of mitigation measures NOI-1a and NOI-1b will ensure that the proposed Specific Plan is consistent with this policy.
6.5.1.2	Where proposed non-residential land uses are likely to produce noise levels exceeding the performance standards of Table 6-2 at existing or planned noise-sensitive uses, an acoustical analysis shall be required as part of the environmental review process so that noise mitigation may be included in the project design.	Non-residential land use noise levels are addressed in Section 3.10, <i>Noise</i> , Impacts NOI-1a and NOI-1b. Implementation of mitigation measures NOI-1a and NOI-1b will ensure that the proposed Specific Plan is consistent with this policy.
6.5.1.3	Where noise mitigation measures are required to achieve the standards of Tables 6-1 and 6-2, the emphasis of such measures shall be placed upon site planning and project design. The use of noise barriers shall be considered a means of achieving the noise standards only after all other practical design-related noise mitigation measures have been integrated into the project and the noise barriers are not incompatible with the surroundings.	Noise mitigation measures are addressed in Section 3.10, <i>Noise</i> , Impacts NOI-1a and NOI-1b. Implementation of mitigation measures NOI-1a and NOI-1b will ensure that the proposed Specific Plan is consistent with this policy.
6.5.1.5	Setbacks shall be the preferred method of noise abatement for residential projects located along U.S. Highway 50. Noise walls shall be discouraged within the foreground viewshed of U.S. Highway 50 and shall be discouraged in favor of less intrusive noise mitigation (e.g., landscaped berms, setbacks) along other high volume roadways.	The proposed Specific Plan proposes no residential uses along US 50.
6.5.1.6	New noise-sensitive uses shall not be allowed where the noise level, due to non-transportation noise sources, will exceed the noise level standards of Table 6-2 unless effective noise mitigation measures have been incorporated into the development design to achieve those standards.	Noise mitigation measures are addressed in Section 3.10, <i>Noise</i> , Impact NOI-1c. Implementation of mitigation measures NOI-1a, NOI-1b and NOI-1c will ensure that the proposed Specific Plan is consistent with this policy.
6.5.1.7	Noise created by new proposed non-transportation noise sources shall be mitigated so as not to exceed the noise level standards of Table 6-2 for noise-sensitive uses.	Non-transportation noise source mitigation is addressed in Section 3.10, <i>Noise</i> , Impact NOI-1c. Implementation of mitigation measures NOI-1a, NOI-1b and NOI-1c will ensure that the proposed Specific Plan is consistent with this policy.
6.5.1.8	New development of noise sensitive land uses will not be permitted in areas exposed to existing or projected levels of noise from transportation noise sources which exceed the levels specified in Table 6-1 unless the project design includes effective mitigation measures to reduce exterior noise and noise levels in interior spaces to the levels specified in Table 6-1.	Project design noise mitigation measures are addressed in Section 3.10, <i>Noise</i> , Impact NOI-1b. Implementation of mitigation measure NOI-1b will ensure that the proposed Specific Plan is consistent with this policy.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
6.5.1.9	Noise created by new transportation noise sources, excluding airport expansion but including roadway improvement projects, shall be mitigated so as not to exceed the levels specified in Table 6-1 at existing noise-sensitive land uses.	New transportation noise sources are addressed in Section 3.10, <i>Noise</i> , Impact NOI-1b. Implementation of mitigation measure NOI-1b will ensure that the proposed Specific Plan is consistent with this policy.
6.5.1.12	When determining the significance of impacts and appropriate mitigation for new development projects, the following criteria shall be taken into consideration. A. Where existing or projected future traffic noise levels are less than 60 dBA Ldn at the outdoor activity areas of residential uses, an increase of more than 5 dBA Ldn caused by a new transportation noise source will be considered significant; B. Where existing or projected future traffic noise levels range between 60 and 65 dBA Ldn at the outdoor activity areas of residential uses, an increase of more than 3 dBA Ldn caused by a new transportation noise source will be considered significant; and C. Where existing or projected future traffic noise levels are greater than 65 dBA Ldn at the outdoor activity areas of residential uses, an increase of more than 1.5 dBA Ldn caused by a new transportation noise will be considered significant.	Mitigation determination is addressed in Section 3.10, <i>Noise</i> , Impact NOI-1b. Implementation of mitigation measure NOI-1b will ensure that the proposed Specific Plan is consistent with this policy.
6.5.1.13	When determining the significance of impacts and appropriate mitigation to reduce those impacts for new development projects, including ministerial development, the following criteria shall be taken into consideration: A. In areas in which ambient noise levels are in accordance with the standards in Table 6-2, increases in ambient noise levels caused by new non-transportation noise sources that exceed 5 dBA shall be considered significant; and B. In areas in which ambient noise levels are not in accordance with the standards in Table 6-2, increases in ambient noise levels caused by new non-transportation noise sources that exceed 3 dBA shall be considered significant.	Mitigation determination is addressed in Section 3.10, <i>Noise</i> , Impact NOI-1c. Implementation of mitigation measures NOI-1a, NOI-1b and NOI-1c will ensure that the proposed Specific Plan is consistent with this policy.
Goal 6.6: Management of Hazardous Materials		
Objective 6.6.1: Regulation of Hazardous Materials		
6.6.1.2	Prior to the approval of any subdivision of land or issuing of a permit involving ground disturbance, a site investigation, performed by a Registered Environmental Assessor or other person experienced in identifying potential hazardous wastes, shall be submitted to the County for any subdivision or parcel that is located on a known or suspected contaminated site included in a list on file with the Environmental Management Department as provided by the State of California and federal agencies. If contamination is found to exist by the site investigations, it shall be corrected and remediated in compliance with applicable laws, regulations, and standards prior to the issuance of a new land use entitlement or building permit.	Site investigations of hazardous wastes is addressed in Section 3.7, <i>Hazards and Hazardous Materials</i> , Impact HAZ-2. Implementation of mitigation measure HAZ-2a will ensure that the proposed Specific Plan is consistent with this policy.
Goal 6.7: Air Quality Maintenance		
Objective 6.7.4: Project Design and Mixed Uses		
6.7.4.1	Reduce automobile dependency by permitting mixed land use patterns which locate services such as banks, child care facilities, schools, shopping centers, and restaurants in close proximity to employment centers and residential neighborhoods.	The proposed Specific Plan is consistent with this policy; Specific Plan objective 4.4 addresses a mixture of land uses to facilitate bicycle and pedestrian travel.
6.7.4.2	Promote the development of new residential uses within walking or bicycling distance to the County's larger employment centers.	Bike paths are proposed in the Specific Plan to be provided. More discussion of this issue is provided in Section 3.14, <i>Transportation and Circulation</i> .

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
6.7.4.4	All discretionary development applications shall be reviewed to determine the need for pedestrian/bike paths connecting to adjacent development and to common service facilities (e.g., clustered mail boxes, bus stops, etc.).	The proposed Specific Plan is consistent with this policy; more discussion of this issue is provided in Section 3.14, <i>Transportation and Circulation</i> , Impact TRA-1. Specific Plan policies 4.1, 4.6, 4.7, 4.8, 6.42, 7.4, 7.7 address use of pedestrian and bicycle paths and trails to connect common services and facilities.
6.7.4.6	The County shall regulate wood-burning fireplaces and stoves in all new development. Environmental Protection Agency (EPA)-approved stoves and fireplaces burning natural gas or propane are allowed. The County shall discourage the use of non-certified wood heaters and fireplaces during periods of unhealthy air quality.	The proposed Specific Plan is consistent with this policy; Specific Plan policies 9.50 and 9.51 regulate installation of wood-burning fireplaces.
Objective 6.7.6: Air Pollution-Sensitive Land Uses		
6.7.6.1	Ensure that new facilities in which sensitive receptors are located (e.g., schools, child care centers, playgrounds, retirement homes, and hospitals) are sited away from significant sources of air pollution.	The proposed Specific Plan is consistent with this policy; a discussion is provided in Section 3.2, <i>Air Quality</i> , Impacts AQ-3a, AQ-3b, and AQ-3c, which concluded that impacts to sensitive receptors would be less than significant or less than significant after implementation of mitigation measures AQ-2b and AQ-3a.
6.7.6.2	New facilities in which sensitive receptors are located (e.g. residential subdivisions, schools, childcare centers, playgrounds, retirement homes, and hospitals) shall be sited away from significant sources of air pollution.	A discussion is provided in Section 3.2, <i>Air Quality</i> , Impacts AQ-3a, and AQ-3c, which concluded that impacts to sensitive receptors would be significant and unavoidable even with implementation of mitigation; and Impact AQ-3b and AQ-5 would be less than significant after implementation of mitigation measures AQ-2a, AQ-2c and AQ-3a.
Objective 6.7.7: Construction Related, Short-Term Emissions		
6.7.7.1	The County shall consider air quality when planning the land uses and transportation systems to accommodate expected growth, and shall use the recommendations in the most recent version of the El Dorado County Air Quality Management (AQMD) <i>Guide to Air Quality Assessment: Determining Significance of Air Quality Impacts Under the California Environmental Quality Act</i> , to analyze potential air quality impacts (e.g., short-term construction, long-term operations, toxic and odor-related emissions) and to require feasible mitigation requirements for such impacts. The County shall also consider any new information or technology that becomes available prior to periodic updates of the Guide. The County shall encourage actions (e.g., use of light-colored roofs and retention of trees) to help mitigate heat island effects on air quality.	The proposed Specific Plan is consistent with this policy. An evaluation of air emissions from the project is provided in Section 3.2, <i>Air Quality</i> . With implementation of Mitigation Measures AQ-2a, AQ-2b, and AQ-2c, the project would be consistent with EDCAQMD rules and regulations. The Specific Plan contains a number of policies related to reducing heat island effects, including use of cool pavement and retention of trees.

CONSERVATION & OPEN SPACE ELEMENT

Goal 7.1: Soil Conservation

Objective 7.1.1: Soils

7.1.1.1	Conserve and maintain important agricultural soils for existing and potential agricultural and forest uses by limiting non-agricultural/non-forestry development on those soils.	The proposed Specific Plan is consistent with this policy; as discussed in Section 3.9, <i>Land Use Planning and Agricultural Resources</i> , Impacts LU-4 and LU-5, the Specific Plan contains no important agricultural soils.
---------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Objective 7.1.2: Erosion/Sedimentation

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
7.1.2.1	Development or disturbance of slopes over 30% shall be restricted. Standards for implementation of this policy, including but not limited to exceptions for access, reasonable use of the parcel, and agricultural uses shall be incorporated into the Zoning Ordinance.	The proposed Specific Plan is consistent with this policy; as discussed in Section 3.5, <i>Geology, Soils, Minerals, and Paleontological Resources</i> , the Specific Plan prohibits development on slopes of 30% or greater.
7.1.2.2	Discretionary and ministerial projects that require earthwork and grading, including cut and fill for roads, shall be required to minimize erosion and sedimentation, conform to natural contours, maintain natural drainage patterns, minimize impervious surfaces, and maximize the retention of natural vegetation. Specific standards for minimizing erosion and sedimentation shall be incorporated into the Zoning Ordinance.	The proposed Specific Plan is consistent with this policy; Specific Plan objective 8.5 describes storm water management to prevent erosion and discussions of soil erosion and creation of a Stormwater Pollution Prevention Plan are provided in Section 3.5, <i>Geology, Soils, Minerals, and Paleontological Resources</i> , Impact GEO-2.
Goal 7.3: Water Quality and Quantity		
Objective 7.3.1: Water Resource Protection		
7.3.1.1	Encourage the use of Best Management Practices, as identified by the Soil Conservation Service, in watershed lands as a means to prevent erosion, siltation, and flooding.	The Specific Plan is consistent with this policy; Specific Plan policies 6.3 through 6.7 address means to prevent erosion and siltation and policies 6.13 through 6.17, and 6.24 and 6.32 address surface water elevation. This is further discussed in Section 3.8, <i>Hydrology and Water Quality</i> .
7.3.1.2	Establish water conservation programs that include both drought tolerant landscaping and efficient building design requirements as well as incentives for the conservation and wise use of water.	The Specific Plan is consistent with this policy; Specific Plan objective 9.7 and policies 9.36, 9.37, 9.38, 9.39, 9.40, 9.41, 9.42, 9.43, 9.44, 9.45, and 9.46 describe drought tolerant landscaping and efficient building design.
Objective 7.3.2: Water Quality		
7.3.2.1	Stream and lake embankments shall be protected from erosion, and streams and lakes shall be protected from excessive turbidity.	Impacts of erosion and water quality are described in Section 3.8, <i>Hydrology, Water Quality, and Water Resources</i> , Impacts WQ-3iii and WQ-6. The proposed Specific Plan is consistent with this policy with implementation of mitigation measures GEO-3d, BIO-1a, BIO-1b, BIO-1c, BIO-3a, BIO-3b, and BIO-4.
7.3.2.2	Projects requiring a grading permit shall have an erosion control program approved, where necessary.	The proposed Specific Plan is consistent with this policy; Specific Plan objective 8.5 describes storm water management to prevent erosion and discussions of soil erosion and creation of a Stormwater Pollution Prevention Plan are provided in Section 3.5, <i>Geology, Soils, Minerals, and Paleontological Resources</i> , Impact GEO-2.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
7.3.2.3	Where practical and when warranted by the size of the project, parking lot storm drainage shall include facilities to separate oils and salts from storm water in accordance with the recommendations of the Storm Water Quality Task Force’s California Storm Water Best Management Practices Handbooks (1993).	The proposed Specific Plan is consistent with this policy; a discussion of a Stormwater Pollution Prevention Plan is provided in Section 3.5, <i>Geology, Soils, Minerals, and Paleontological Resources</i> .
Objective 7.3.3: Wetlands		
7.3.3.1	For projects that would result in the discharge of material to or that may affect the function and value of river, stream, lake, pond, or wetland features, the application shall include a delineation of all such features. For wetlands, the delineation shall be conducted using the U.S. Army Corps of Engineers (USACE) Wetland Delineation Manual.	Impacts to the function and value of waters are discussed in Section 3.3, <i>Biological Resources</i> , Impacts BIO-3 and BIO-4. The proposed Specific Plan is consistent with this policy with implementation of mitigation measures BIO-1a, BIO-1b, BIO-1c, BIO-3a, and BIO-3b.
7.3.3.5	Rivers, streams, lakes and ponds, and wetlands shall be integrated into new development in such a way that they enhance the aesthetic and natural character of the site while disturbance to the resource is avoided or minimized and fragmentation is limited.	The proposed Specific Plan is consistent with this policy; preservation of wetlands is addressed in Specific Plan policy 6.8, preservation of Deer and Marble Creeks is addressed in Specific Plan policy 6.13, and development integration is addressed in Specific Plan policies 6.14 and 6.15.
Objective 7.3.4: Drainage		
7.3.4.1	Natural watercourses shall be integrated into new development in such a way that they enhance the aesthetic and natural character of the site without disturbance.	The proposed Specific Plan is consistent with this policy; preservation of Deer and Marble Creeks is addressed in Specific Plan policy 6.13 and development integration is addressed in Specific Plan policies 6.14 and 6.15.
7.3.4.2	Modification of natural stream beds and flow shall be regulated to ensure that adequate mitigation measures are utilized.	The proposed Specific Plan is consistent with this policy; preservation of Deer and Marble Creeks in their natural state is addressed in Specific Plan policy 6.13.
Objective 7.3.5: Water Conservation		
7.3.5.1	Drought-tolerant plant species, where feasible, shall be used for landscaping of commercial development. Where the use of drought-tolerant native plant species is feasible, they should be used instead of non-native plant species.	The proposed Specific Plan is consistent with this policy; Specific Plan policy 9.44 requires the use of drought tolerant and native plant species in a minimum of 75% of the Plan Area.
7.3.5.4	Require efficient water conveyance systems in new construction. Establish a program of ongoing conversion of open ditch systems shall be considered for conversion to closed conduits, reclaimed water supplies, or both, as circumstances permit.	The proposed Specific Plan is consistent with this policy; Specific Plan policy 9.40 addresses creation of a backbone recycled water system for landscaping and Specific Plan policy 9.41 addresses use of recycled water for nonresidential toilet flushing.
7.3.5.5	Encourage water reuse programs to conserve raw or potable water supplies consistent with State Law.	The proposed Specific Plan is consistent with this policy; Specific Plan policy 9.40 addresses creation of a backbone recycled water system for parks, schools and landscaped corridors.

Goal 7.4: Wildlife and Vegetation Resources

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
Objective 7.4.2: Identify and Protect Resources		
7.4.2.3	Consistent with Policy 9.1.3.1 of the Parks and Recreation Element, low impact uses such as trails and linear parks may be provided within river and stream buffers if all applicable mitigation measures are incorporated into the design.	The proposed Specific Plan is consistent with this policy; Specific Plan policy 6.43 addresses siting of infrastructure to minimize impacts to Deer and Marble Creeks.
7.4.2.4	Protect and preserve wildlife habitat corridors within public parks and natural resource protection areas to allow for wildlife use. Recreational uses within these areas shall be limited to those activities that do not require grading or vegetation removal.	Conservation of wildlife corridors is provided in Section 3.3, <i>Biological Resources</i> , Impact BIO-14. Implementation of mitigation measures BIO-1d and BIO-9b would ensure that the proposed Specific Plan would be consistent with this policy.
7.4.2.8	<p>Conserve contiguous blocks of important habitat to offset the effects of increased habitat loss and fragmentation elsewhere in the County through a Biological Resource Mitigation Program (Program). The Program will result in the conservation of: 1. Habitats that support special status species; 2. Aquatic environments including streams, rivers, and lakes; 3. Wetland and riparian habitat; 4. Important habitat for migratory deer herds; and 5. Large expanses of native vegetation.</p> <p>A. Habitat Protection Strategy. The Program establishes mitigation ratios to offset impacts to special-status species habitat and special-status vegetation communities within the County. Special-status species include plants and animals in the following categories:</p> <ul style="list-style-type: none"> • Species listed or proposed for listing as Threatened or Endangered under the federal Endangered Species Act (ESA) or the California Endangered Species Act (CESA); • Species considered as candidates for listing as Threatened or Endangered under ESA or CESA; • Wildlife species identified by California Department of Fish and Wildlife (CDFW) as Species of Special Concern; • Wildlife species identified by US Fish and Wildlife Service (USFWS) and National Marine Fisheries Service (NMFS) as Species of Concern; • Plants listed as Endangered or Rare under the California Native Plant Protection Act; • Animals fully protected under the California Fish and Game Code; • Plants that have a California Native Plant Society (CNPS) California Rare Plant Rank (CRPR) of 1A (plants presumed extirpated in California and either rare or extinct elsewhere), 1B (plants rare, threatened, or endangered in California and elsewhere), 2A (plants presumed extirpated in California, but more common elsewhere), or 2B (plants rare, threatened, or endangered in California, but more common elsewhere). The CNPS CRPRs are used by both CDFW and USFWS in their consideration of formal species protection under ESA or CESA. <p>C. Biological Resources Assessment. A site-specific biological resources technical report will be required to determine the presence of special-status biological resources that may be affected by a proposed discretionary project. Vegetation communities and special-status plants shall be mapped and assessed in accordance with the CDFG 2009 Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities and subsequent updates, and the List of Vegetation Alliances and Associations (CDFG 2010) and subsequent updates. Any surveys conducted to evaluate potential presence of special-status wildlife species shall conform to practices recommended by CDFW and/or USFWS at the time of the surveys. The report will include an assessment of direct, indirect and cumulative impacts to biological resources, including vegetation communities, plant and wildlife species and wildlife movement. The report shall include recommendations for:</p> <ul style="list-style-type: none"> • pre-construction surveys and avoidance/protection measures for nesting birds; • pre-construction surveys and avoidance/protection measures for roosting bats; • avoidance and minimization measures to reduce impacts related to entrapment, entanglement, injury, or poisoning of wildlife; and ☐ avoidance and minimization measures to reduce indirect impacts to wildlife in open space adjacent to a project site. <p>The results of the biological resources technical report shall be used as the basis for establishing mitigation requirements in conformance with this policy and the Oak Resources Management Plan (ORMP, see General Plan Policy 7.4.4.4).</p>	<p>Conservation of wildlife corridors is provided in Section 3.3, <i>Biological Resources</i>, Impact BIO-14. Implementation of mitigation measures BIO-1d and BIO-19b would ensure that the proposed Specific Plan would be consistent with this policy.</p> <p>The proposed Specific Plan is consistent with policies 6.29 and 6.30 that address habitat conservation consistent with the ORMP, and Policy 7.4.4.4 (Option A) depending on which regulation is in place at the time of development. Discussions of specific species and habitat preservation strategies are provided in Section 3.3, <i>Biological Resources</i>, Impacts BIO-1, BIO-2, BIO-5, BIO-6, BIO-7, BIO-8, BIO-9, BIO-10, BIO-11, BIO-12, BIO-13, and BIO-14. Implementation of mitigation measures BIO-1a, BIO-1b, BIO-1c, BIO-1d, BIO-1e, BIO-2, BIO-6a, BIO-6b, BIO-7a, BIO-7b, BIO-8, BIO-9, BIO-10a, BIO-10b, BIO-11a, BIO-11b, BIO-12, BIO-13, and BIO-14 would ensure that the proposed Specific Plan would be consistent with this policy.</p>
Objective 7.4.4: Forest, Oak Woodland, and Tree Resources		

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
7.4.4.2	Through the review of discretionary projects, the County, consistent with any limitations imposed by State law, shall encourage the protection, planting, restoration, and regeneration of native trees in new developments and within existing communities.	The proposed Specific Plan is consistent with this policy; Specific Plan policy 6.35 addresses use of a tree preservation and replacement plan to protect native trees.
7.4.4.3	Utilize the clustering of development to retain the largest contiguous areas of forests and oak woodlands possible.	The proposed Specific Plan is consistent with this policy; Specific Plan policies 6.29 and 6.30 address clustering of development areas to retain contiguous stands of oak woodland habitat.
7.4.4.4	For all new development projects or actions that result in impacts to oak woodlands and/or individual native oak trees, including Heritage Trees, the County shall require mitigation as outlined in the El Dorado County Oak Resources Management Plan (ORMP). The ORMP functions as the oak resources component of the County’s biological resources mitigation program, identified in Policy 7.4.2.8.	The proposed Specific Plan is consistent with this policy; Specific Plan policies 6.29 and 6.30 address woodland habitat restoration and enhancement within the BRS/IHMP and is discussed in Section 3.3, <i>Biological Resources</i> .
7.4.4.5	Where existing individual or a group of oak trees are lost within a stand, a corridor of oak trees shall be retained that maintains continuity between all portions of the stand. The retained corridor shall have a tree density that is equal to the density of the stand.	The proposed Specific Plan is consistent with this policy; Specific Plan policies 6.29 and 6.30 address retention of contiguous tree stands and a tree survey, preservation, and replacement plan.
Objective 7.4.5: Native Vegetation and Landmark Trees		
7.4.5.1	A tree survey, preservation, and replacement plan shall be required to be filed with the County prior to issuance of a grading permit for discretionary permits on all high-density residential, multifamily residential, commercial, and industrial projects. To ensure that proposed replacement trees survive, a mitigation monitoring plan should be incorporated into discretionary projects when applicable and shall include provisions for necessary replacement of trees.	The proposed Specific Plan is consistent with this policy; Specific Plan policy 6.35 addresses use of a tree preservation and replacement plan to protect native trees.
Goal 7.5: Cultural Resources		
Objective 7.5.1: Protection of Cultural Heritage		
7.5.1.3	Cultural resource studies (historic, prehistoric, and paleontological resources) shall be conducted prior to approval of discretionary projects. Studies may include, but are not limited to, record searches through the North Central Information Center at California State University, Sacramento, the Museum of Paleontology, University of California, Berkeley, field surveys, subsurface testing, and/or salvage excavations. The avoidance and protection of sites shall be encouraged.	The proposed Specific Plan is consistent with this policy; as described in Section 3.4, <i>Cultural Resources</i> , cultural resources studies have been conducted.
Objective 7.5.2: Visual Integrity		
7.5.2.4	The County shall prohibit the modification of all National Register of Historic Places (NRHP)/California Register of Historical Resources (CRHR) listed properties that would alter their integrity, historic setting, and appearance to a degree that would preclude their continued listing on these registers. If avoidance of such modifications on privately owned listed properties is deemed infeasible, mitigation measures commensurate with NRHP/CRHR standards shall be formulated in cooperation with the property owner.	The proposed Specific Plan is consistent with this policy; Specific Plan policy 6.36 addresses development of avoidance and mitigation plans to prevent significant impacts to listed properties.
7.5.2.5	In cases where the County permits the demolition or alteration of an historic building, such alteration or new construction (subsequent to demolition) shall be required to maintain the character of the historic building or replicate its historic features.	The proposed Specific Plan is consistent with this policy; as described in Section 3.4, <i>Cultural Resources</i> , no historical built environment resources are located in the project area.
Goal 7.6: Open Space Conservation		
Objective 7.6.1: Importance of Open Space		

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
7.6.1.4	The creation of new open space areas, including Ecological Preserves, common areas of new subdivisions, and recreational areas, shall include wildfire safety planning.	The proposed Specific Plan is consistent with this policy; a discussion of wildfire safety is provided in Section 3.7, <i>Hazards and Hazardous Materials</i> , Impact HAZ-8.

PARKS & RECREATION ELEMENT

Goal 9.1: Parks and Recreation Facilities

Objective 9.1.1: Park Acquisition and Development

9.1.1.1 The County shall assist in the development of regional, community, and neighborhood parks, ensure a diverse range of recreational opportunities at a regional, community, and neighborhood level, and provide park design guidelines and development standards for park development. The following national standards shall be used as guidelines for the acquisition and development of park facilities:

Guidelines For Acquisition and Development of Park Facilities	
Park Types	Developed
Regional Parks	1.5 ac/1,000 population
Community Parks	1.5 ac/1,000 population
Neighborhood Parks	2.0 ac/1,000 population
<i>Specific Standards (Neighborhood and Community Parks)</i>	
Cameron Park Community Services District	5.0 ac/1,000 population
El Dorado Hills Community Services District	5.0 ac/1,000 population
Planned Communities	5.0 ac/1,000 population

The proposed Specific Plan is consistent with this policy; a discussion of neighborhood and local parks that satisfy the dedication requirement of 5.0 acres park land per 1,000 population is provided in Section 3.13, *Recreation*, Impact REC-1.

The parkland dedication/in-lieu fees shall be directed towards the purchase and funding of neighborhood and community parks.

9.1.1.2 Neighborhood parks shall be primarily focused on serving walk-to or bike-to recreation needs. When possible, neighborhood parks should be adjacent to schools. Neighborhood parks are generally 2 to 10 acres in size and may include a playground, tot lot, turf areas, and picnic facilities.

The proposed Specific Plan is consistent with this policy; a discussion of placement of neighborhood parks adjacent to schools is provided in Section 3.13, *Recreation*, Impact REC-1.

9.1.1.5 Parkland dedicated under the Quimby Act must be suitable for active recreation uses and:
 A. Shall have a maximum average slope of 10 percent;
 B. Shall have sufficient access for a community or neighborhood park; and
 C. Shall not contain significant constraints that would render the site unsuitable for development.

The proposed Specific Plan is consistent with this policy; park sites meet the criteria outlined in Policy 9.1.1.5. More discussion is provided in Section 3.13, *Recreation*.

Objective 9.1.2: County Trails

9.1.2.4 Evaluate every discretionary application as well as public facilities planning with regard to their ability to implement the *Hiking and Equestrian Trails Master Plan* and the *Bikeway Master Plan*.

The proposed Specific Plan is consistent with this policy; a discussion of proposed bicycle and pedestrian improvements is provided in Section 3.14, *Transportation and Circulation*, Impact TRA-1.

9.1.2.8 Integrate and link, where possible, existing and proposed National, State, regional, County, city and local hiking, bicycle, and equestrian trails for public use.

The proposed Specific Plan is consistent with this policy; a discussion of an extensive trail system including Class I and II bikeways and paved and unpaved trails is provided in Section 3.14, *Transportation and Circulation*, Impact TRA-1.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
Objective 9.1.3 Incorporation of Parks and Trails		
9.1.3.1	Linear parks and trails may be incorporated along rivers, creeks, and streams wherever possible.	The proposed Specific Plan is consistent with this policy; the Specific Plan provides a trail system along Deer and Marble Creeks.
Goal 9.2: Funding		
Objective 9.2.2: Quimby Act		
9.2.2.2	New development projects creating community or neighborhood parks shall provide mechanisms (e.g., homeowners associations, or benefit assessment districts) for the ongoing development, operation, and maintenance needs of these facilities if annexation to an existing parks and recreation service district/provider is not possible.	The proposed Specific Plan is consistent with this policy; a Specific Plan homeowners association is proposed to be created.
Objective 9.2.3: Grants, Fees and Contributions		
9.2.3.5	The County will encourage private sector development, operation, and maintenance of recreation facilities.	The proposed Specific Plan is consistent with this policy; the project includes development, operation, and maintenance of some recreation facilities.
ECONOMIC DEVELOPMENT ELEMENT		
Goal 10.1: Cooperation		
Objective 10.1.9: Jobs-Housing Relationship		
10.1.9.2	Encourage specific plans and large planned developments in Community Regions and Rural Centers to include a broad mix of housing types and relate it to local wage structures to achieve balance with existing and forecasted resident household needs.	The proposed Specific Plan provides low, medium-, and high-density housing.
10.1.9.3	The County shall actively promote job generating land uses while de-emphasizing residential development unless it is tied to a strategy that is necessary to attract job generating land uses.	The proposed Specific Plan will include some job-generating uses with commercial development, and is in close proximity to other job generating land uses in the region.
Goal 10.2: Public Services and Infrastructure		
Objective 10.2.1: Public and Civic Facilities Investment		
10.2.1.4	Require new discretionary development to pay its fair share of the costs of all civic and public and community facilities it utilizes based upon the demand for these facilities which can be attributed to new development.	The proposed Specific Plan is consistent with this policy; more discussion is provided in Section 3.12, <i>Public Services and Utilities</i> .
10.2.1.5	A public facilities and services financing plan that assures that costs burdens of any civic, public, and community facilities, infrastructure, ongoing services, including operations and maintenance necessitated by a development proposal, as defined below, are adequately financed to assure no net cost burden to existing residents shall be submitted with the following development applications: A. Specific plans; and B. All residential, commercial, and industrial projects located within a Community Region or Rural Center which exceed the following thresholds: 1. Residential.....50 units 2. Commercial.....20 acres or 100,000 square feet 3. Industrial.....20 acres or 250,000 square feet	The proposed Specific Plan is consistent with this policy; the project includes a Specific Plan with a plan for provision of and funding for infrastructure and public services.

Appendix B. Continued

Policy Numbers	Policy	Project Consistency
10.2.1.6	Provision of new infrastructure and facilities shall be coordinated with existing infrastructure and facilities and shall maximize use of existing facilities capacity to the extent that any exists.	The proposed Specific Plan is consistent with this policy; the County has been in contact with and will coordinate with infrastructure providers (such as EID) to maximize use of existing capacity of facilities. Off-site infrastructure needs are addressed throughout the EIR.
Objective 10.2.2: Equitable Financing Methods for Public Improvements		
10.2.2.2	<p>Stress financing strategies that maximize the use of pay-as-you-go methods to gain the most benefit from available revenue without placing unreasonable burdens on new development.</p> <p><u>Program 10.2.2.2.1:</u> When a project directly or indirectly impacts existing public services and/or infrastructure, it shall provide for and finance improvements consistent with the degree of impact to public services and/or infrastructure directly or indirectly attributed to the project. Cost to be borne by the project proponent shall be determined on the basis of the above described nexus and other pre-existing legally binding agreements such as development agreements.</p>	The proposed Specific Plan is consistent with this policy; the project includes a Specific Plan with a plan for provision of and funding for infrastructure and public services.

VMV 2024 Intrack - El Dorado-Mountain County County, Summer

VMV 2024 Intrack
El Dorado-Mountain County County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Condo/Townhouse	277.00	Dwelling Unit	32.23	277,000.00	792
Single Family Housing	110.00	Dwelling Unit	38.39	198,000.00	315

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2040
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity	641.35	CH4 Intensity	0.029	N2O Intensity	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -
 Land Use - Acreage scaled from total acreage for buildout of land use
 Construction Phase - scaled durations to one year; assumed trenching duration is similiar to site preparation
 Off-road Equipment - per applicant
 Grading - total acreage graded
 Trips and VMT -

VMV 2031 Intrack
El Dorado-Mountain County County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Condo/Townhouse	143.00	Dwelling Unit	16.64	143,000.00	409
Apartments Low Rise	25.00	Dwelling Unit	1.27	25,000.00	72

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2040
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity	641.35	CH4 Intensity	0.029	N2O Intensity	0.006

1.3 User Entered Comments & Non-Default Data

- Project Characteristics -
- Land Use - Acreage scaled from total acreage for buildout of land use
- Construction Phase - assumed trenching duration is similiar to site preparation
- Off-road Equipment - per applicant
- Grading - total acreage graded
- Trips and VMT -

VMV 2033 NonRes - El Dorado-Mountain County County, Summer

VMV 2033 NonRes
El Dorado-Mountain County County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	12.00	1000sqft	0.28	12,000.00	0
City Park	8.00	Acre	8.00	348,480.00	0
User Defined Recreational	10.00	User Defined Unit	10.00	0.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2040
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity	641.35	CH4 Intensity	0.029	N2O Intensity	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -
 Land Use - acreage per PD
 Construction Phase - scaled durations to one year
 Off-road Equipment - equipment for vineyard added
 Grading -
 Architectural Coating - VOC content updated per EDCAQMD Rule 215

Operation CalEEMod

VMVSP Annual Operation - 2023 - El Dorado-Mountain County County, Summer

VMVSP Annual Operation - 2023
El Dorado-Mountain County County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Condo/Townhouse	35.00	Dwelling Unit	2.19	35,000.00	100
Single Family Housing	125.00	Dwelling Unit	40.58	225,000.00	358

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2023
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity	641.35	CH4 Intensity	0.029	N2O Intensity	0.006

1.3 User Entered Comments & Non-Default Data

- Vehicle Trips - Trip rates from F&P (account for internalization and mixed use design)
- Woodstoves - Hearth assumptions provided by applicant
- Area Mitigation - Only natural gas hearth (VMVSP 9.50 and 9.51)
- Energy Mitigation - Min 7% better than 2016 code (model default) per 2019 standard

Strip Mall	75.00	1000sqft	1.72	75,000.00	0

1.2 Other Project Characteristics

Urbanization Urban Wind Speed (m/s) 2.7 Precipitation Freq (Days) 70
 Climate Zone 1 Operational Year 2030

Utility Company Pacific Gas & Electric Company

CO2 Intensity 133 CH4 Intensity 0.018 N2O Intensity 0.002

1.3 User Entered Comments & Non-Default Data

Project Characteristics - PG&E and eGrid emission factors adjusted for SB100 and RPS
 Land Use - Land use assumptions from project description
 Vehicle Trips - Trip rates from F&P
 Woodstoves - Hearth assumptions provided by applicant
 Water And Wastewater - Water assumptions from WSP water study
 Energy Mitigation - Conservatively only included a 7% exceedance over 2016 Title 24 (model default) per min residential improvement with 2019 code.

Strip Mall	75.00	1000sqft	1.72	75,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2030
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity	133	CH4 Intensity	0.018	N2O Intensity	0.002

1.3 User Entered Comments & Non-Default Data

- Project Characteristics - PG&E and eGrid emission factors adjusted for SB100 and RPS
- Land Use - Land use assumptions from project description
- Vehicle Trips - Trip rates from F&P (account for internalization and mixed use design)
- Woodstoves - Hearth assumptions provided by applicant
- Water And Wastewater - Water assumptions from WSP water study (includes 20% reduction in indoor residential water use per VMVSP Policy 9.36)
- Area Mitigation - Only natural gas hearth (VMVSP 9.50 and 9.51)
- Energy Mitigation - Energy Star appliances per VMVSP 9.16. Conservatively only included a 7% exceedance over 2016 Title 24 (model default) per min residential
- Water Mitigation - Recycled water per WSA study (VMVSP Policy 9.40), water efficient irrigation (VMVSP Policy 9.42), turf (VMVSP Policy 9.45)

VMVSP Annual Operation - 2030 with VMVSP - El Dorado-Mountain County County, Summer

**VMVSP Annual Operation - 2030 with VMVSP
El Dorado-Mountain County County, Summer**

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	60.00	1000sqft	1.38	60,000.00	0
Other Asphalt Surfaces	11.00	Acre	11.00	479,160.00	0
City Park	1.00	Acre	1.00	43,560.00	0
Apartments Low Rise	291.00	Dwelling Unit	18.19	291,000.00	832
Condo/Townhouse	565.00	Dwelling Unit	35.31	565,000.00	1616
Single Family Housing	721.00	Dwelling Unit	234.09	1,297,800.00	2062
Strip Mall	75.00	1000sqft	1.72	75,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2030
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity	133	CH4 Intensity	0.018	N2O Intensity	0.002

1.3 User Entered Comments & Non-Default Data

- Project Characteristics - PG&E and eGrid emission factors adjusted for SB100 and RPS
- Land Use - Land use assumptions from project description
- Vehicle Trips - Trip rates from F&P (account for internalization and mixed use design)
- Woodstoves - Hearth assumptions provided by applicant
- Water And Wastewater - Water assumptions from WSP water study (includes 20% reduction in indoor residential water use per VMVSP Policy 9.36)
- Area Mitigation - Only natural gas hearth (VMVSP 9.50 and 9.51)
- Energy Mitigation - Energy Star appliances per VMVSP 9.16. Conservatively only included a 7% exceedance over 2016 Title 24 (model default) per min
- Water Mitigation - Recycled water per WSA study (VMVSP Policy 9.40), water efficient irrigation (VMVSP Policy 9.42), turf (VMVSP Policy 9.45)

Other Asphalt Surfaces	11.00	Acre	11.00	479,160.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2035
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity	53	CH4 Intensity	0.007	N2O Intensity	0.001

1.3 User Entered Comments & Non-Default Data

- Project Characteristics - PG&E and eGrid emission factors adjusted for SB100 and RPS
- Land Use - Land use assumptions from project description
- Vehicle Trips - Trip rates from F&P
- Woodstoves - Hearth assumptions provided by applicant
- Water And Wastewater - Water assumptions from WSP water study
- Energy Mitigation - Min 7% above 2016 code assumed for 2019 Title 24 standards

Other Asphalt Surfaces	11.00	Acre	11.00	479,160.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2035
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity	53	CH4 Intensity	0.007	N2O Intensity	0.001

1.3 User Entered Comments & Non-Default Data

- Project Characteristics - PG&E and eGrid emission factors adjusted for SB100 and RPS
- Land Use - Land use assumptions from project description
- Vehicle Trips - Trip rates from F&P (account for internalization and mixed use design)
- Woodstoves - Hearth assumptions provided by applicant
- Area Mitigation - Only natural gas hearth (VMVSP 9.50 and 9.51)
- Water And Wastewater - Water assumptions from WSP water study (includes 20% reduction in indoor residential water use per VMVSP Policy 9.36)
- Energy Mitigation - Energy Star appliances per VMVSP 9.16. Conservatively only included a 7% exceedance over 2016 Title 24 (model default) per min
- Water Mitigation - Recycled water per WSA study (VMVSP Policy 9.40), water efficient irrigation (VMVSP Policy 9.42), turf (VMVSP Policy 9.45)

Other Asphalt Surfaces	11.00	Acre	11.00	479,160.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2035
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity	53	CH4 Intensity	0.007	N2O Intensity	0.001

1.3 User Entered Comments & Non-Default Data

- Project Characteristics - PG&E and eGrid emission factors adjusted for SB100 and RPS
- Land Use - Land use assumptions from project description
- Vehicle Trips - Trip rates from F&P (account for internalization and mixed use design)
- Woodstoves - Hearth assumptions provided by applicant
- Area Mitigation - Only natural gas hearth (VMVSP 9.50 and 9.51)
- Water And Wastewater - Water assumptions from WSP water study (includes 20% reduction in indoor residential water use per VMVSP Policy 9.36)
- Energy Mitigation - Energy Star appliances per VMVSP 9.16. Conservatively only included a 7% exceedance over 2016 Title 24 (model default) per min
- Water Mitigation - Recycled water per WSA study (VMVSP Policy 9.40), water efficient irrigation (VMVSP Policy 9.42), turf (VMVSP Policy 9.45)

Strip Mall	100.00	1000sqft	2.30	100,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.7	Precipitation Freq (Days)	70
Climate Zone	1			Operational Year	2045
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity	0	CH4 Intensity	0	N2O Intensity	0

1.3 User Entered Comments & Non-Default Data

- Project Characteristics - PG&E and eGrid emission factors adjusted for SB100 and RPS
- Land Use - Land use assumptions from project description
- Vehicle Trips - Trip rates from F&P
- Woodstoves - Hearth assumptions provided by applicant
- Water And Wastewater - Water assumptions from WSP water study
- Energy Mitigation - Min 7% above 2016 code assumed for 2019 Title 24 standards

1.3 User Entered Comments & Non-Default Data

- Project Characteristics - PG&E and eGrid emission factors adjusted for SB100 and RPS
- Land Use - Land use assumptions from project description
- Vehicle Trips - Trip rates from F&P (account for internalization and mixed use design)
- Woodstoves - Hearth assumptions provided by applicant
- Water And Wastewater - Water assumptions from WSP water study (includes 20% reduction in indoor residential water use per VMVSP Policy 9.36)
- Area Mitigation - Only natural gas hearth (VMVSP 9.50 and 9.51)
- Energy Mitigation - Energy Star appliances per VMVSP 9.16. Conservatively only included a 7% exceedance over 2016 Title 24 (model default) per min
- Water Mitigation - Recycled water per WSA study (VMVSP Policy 9.40), water efficient irrigation (VMVSP Policy 9.42), turf (VMVSP Policy 9.45)

1 INTRODUCTION

This Air Quality and Greenhouse Gas (GHG) Technical Report (referred to as Technical Report hereafter) presents an update to the emissions modeling conducted for the Village of Marble Valley Specific Plan (VMVSP) Environmental Impact Report (EIR), using the latest emissions modeling software and accounting for recent legislative requirements that address air pollutant and GHG emissions reductions. These updated emissions estimates shall be the basis for updating significance determinations for impacts AQ-2a and AQ-2b of Section 3.2 Air Quality of the VMVSP EIR, and Impacts GHG-1a and GHG-1b of Section 3.6, Greenhouse Gas Emissions of the VMVSP EIR, in accordance with El Dorado County Air Quality Management District (EDCAQMD) thresholds (EDCAQMD 2002a).

2 PROJECT DESCRIPTION

The proposed project would be a mixed-use community consisting of residential, commercial, retail, agricultural, and open space uses. Specifically, the proposed project would allow the development of up to 3,236 residential units, 475,000 square feet of commercial uses, 55 acres of agricultural use, 87 acres of public facilities/ recreational use (including 47 acres of public parkland), and 61 acres of road impact areas and future rights-of-way. The proposed project also would designate 1,284 acres as natural open space; 466 acres of which would allow for active recreation, including camps, equestrian trails, and mountain biking trails. The proposed project would be designed in a manner that would concentrate a majority of the density and intensity in a 1-mile core along the entry roadway and would be designed to preserve, enhance, and highlight the historical use of the property for limestone quarrying. In addition, the proposed project includes a special project theme focusing on vineyard landscapes.

Several infrastructure improvements outside the VMVSP area would be required to support the project. These off-site improvements would include connections to existing water and wastewater facilities, road extensions, pedestrian access and recreational trails, and a backbone recycled water system within the planning area.

3 AIR QUALITY

This section presents the air quality assessment which includes emissions estimates for short-term (construction) and long-term (operational) increases in criteria air pollutants (i.e., particulate matter) and precursors (i.e., reactive organic gases [ROG] and nitrogen oxides [NO_x]). This assessment includes carbon monoxide (CO) mass emissions modeling but does not include CO dispersion modeling nor analysis of toxic air contaminants and odors. The following sections present the methods of analysis and associated air pollutant emissions that could result from buildout of the VMVSP.

3.1 METHODS

Air pollutant emissions associated with construction and operation of the project were assessed and quantified using standard and accepted software tools, techniques, and emissions factors. The construction and operational emissions modeling and assessment is consistent with the recommendations of EDCAQMD and the California Air Resources Board (CARB). In addition, recent legislative requirements, VMVSP policies, and EIR mitigation measures that would result in emission reductions are included as mitigated project scenarios. A summary of modeling methodology and calculations for construction and operational emissions is provided below.

3.1.1 Construction

Criteria air pollutant and precursor emissions associated with project construction were estimated using the California Emissions Estimator Model (CalEEMod), version 2022.1, which were the latest tools available at the time of the analysis. Modeling inputs included project-specific land use types and sizes and construction phasing, timing and activities included in Chapter 2, "Project Description," of the EIR, and provided by the project applicant. Model defaults for all other assumptions were used for construction emissions modeling. Buildout of the project was assumed to occur over an extended period beginning in 2025, with full buildout anticipated in 2045. Construction

was assumed to progress according to the schedule summarized in Table 3-1. See Appendix A for model outputs and detailed assumptions.

3.1.2 Operation

Operational mobile, area, and energy emissions were also estimated using CalEEMod, version 2022.1 using a combination of project-specific information and model defaults. Modeling inputs included land use types, sizes, and other project details and assumptions included the EIR, including updated inputs from the project applicant. Project-specific trip rates and vehicle miles traveled (VMT) were obtained from the Fehr & Peers Technical Memorandum dated April 9, 2021, which were used to estimate mobile-source emissions. Fully mitigated mobile emissions include the mitigated VMT estimate identified by Fehr & Peers as a result of Mitigation Measure TRA-2 which shifts 25,000 square feet of commercial office use to commercial retail use. Electricity consumption is based on model defaults, while electricity emissions factors were adjusted based on the most recent power label available for Pacific Gas & Electric (PG&E) to account for an increase in carbon-free electricity pursuant to the Renewables Portfolio Standard (RPS) anticipated for operational years including in this analysis. Area-source and waste emissions were modeled using CalEEMod default values. Water and wastewater emissions were modeled using project-specific consumption values specified in the water supply assessment.

Operational modeling was conducted for various years. For purposes of analysis, buildout is assumed to occur in 2045. Additionally, operational modeling was conducted for operational years that could potentially overlap with construction. As discussed below and as shown in Table 3.1, vertical construction of several residential units would begin in year 1 and operation emissions could begin immediately thereafter in year 3. Accordingly, concurrent construction and operational activities would occur from years 3 through 18, resulting in higher maximum daily emissions than either component when analyzed separately. For purposes of analysis, it was assumed that the first operational year would be 2027 (year 3 of construction).

See Appendix A for model outputs and detailed assumptions.

3.2 RESULTS

3.2.1 Construction Emissions

Construction emissions were modeled for two scenarios: unmitigated and mitigated. The mitigated scenario includes reductions from mitigation measures provided in the EIR. As shown in Table 3-1, several construction activities would likely occur concurrently. To ensure a conservative analysis, maximum daily emissions during these periods of overlap were estimated assuming all equipment would operate at the same time. This approach identifies the maximum daily project-related air quality impact during construction. Estimated unmitigated construction emissions, which do not include emissions reductions from mitigation measures, are summarized in Table 3-2 (which is Table 3.2-4 of the EIR).

Table 3-2 Maximum Daily Unmitigated Construction Emissions (pounds per day)^a (Table 3.2-4 of the EIR)

Threshold	82	82	N/A	BMPs	-	-	BMPs	-	-

Notes: BMPs = best management practices; CO = carbon monoxide; N/A = not applicable; NO_x = nitrogen oxides; PM_{2.5} = particulate matter less than or equal to 2.5 microns; PM₁₀ = particulate matter less than or equal to 10 microns; ROG = reactive organic gases.

Bold values indicate exceedance of applicable threshold.

^a Values may not sum exactly due to rounding.

^b EDCAQMD CEQA Guidelines consider dust impacts to be less than significant for projects that implement BMPs. EIR Mitigation Measure AQ-2c outlines these BMPs and is required to reduce the impact of construction-related fugitive dust to a less-than-significant level (EDCAQMD 2002b).

Source: CalEEMod 2022.1 (based on modeling conducted by Ascent in 2024).

Table 3-3 below presents the criteria air pollutant and precursor construction-related emissions from buildout of the project with EIR mitigation measures applied. Mitigated construction emissions were quantified using CalEEMod and off-model calculations in Microsoft Excel. See Appendix A for model outputs and detailed assumptions.

- ▶ **Mitigation Measure AQ-2a. Low-Volatile Organic Compounds (VOC) Coatings During Construction.** Mitigated construction modeling assumed the use of low-VOC coatings during construction activity with a VOC content of 10 grams per liter.
- ▶ **Mitigation Measure AQ-2b. 10 Percent Reduction in NO_x During Construction Years 1-2.** Mitigated construction modeling assumed a 10 percent reduction in NO_x emissions from off-road equipment during the first two construction years.¹

¹ Based on the text for Mitigation Measure AQ-2b in the EIR, this NO_x requirement will sunset on January 1, 2028 provided that CARB has implemented its In-Use Off-Road. Given that construction is now assumed to start in 2026, this mitigation

- ▶ **Mitigation Measure AQ-2c. Tier 4 Final Construction Equipment Years 3-18.** Mitigated construction modeling assumed Tier 4 Final off-road equipment would be used during construction between construction years 3-18.
- ▶ **Mitigation Measure AQ-2d. Fugitive Dust Control During Construction.** Mitigated construction modeling applied a 61 percent reduction in PM₁₀ and PM_{2.5} dust construction emissions from watering exposed surfaces and 55 percent reduction in PM₁₀ and PM_{2.5} dust emissions associated with watering unpaved construction roads. The anticipated reduction in fugitive dust is consistent with EDCAQMD's and South Coast Air Quality Management District's fugitive dust reduction methodology embedded within CalEEMod (EDCAQMD 2002b, SCAQMD 2007).

measure is assumed to apply to the first two years of construction only (2026 and 2027). Starting in year 3 (2028),
Mitigation Measure AQ-2c takes over.

3.2.2 Operational Emissions

Operational criteria air pollutant and precursor emissions were modeled for two scenarios: an unmitigated scenario and a fully mitigated scenario that accounts for reductions from VMVSP policies as well proposed EIR mitigation. Based on the project construction schedule, it was assumed that the first operational year at full buildout would be 2045. The scenarios are described below. Emissions were quantified using CalEEMod and off-model calculations in Microsoft Excel. See Appendix A for model outputs and detailed assumptions.

The unmitigated scenario presents criteria air pollutant and precursor emissions from project buildout with legislative requirements that are default in CalEEMod at the time of analysis. The unmitigated analysis does not take into account VMVSP policies or EIR mitigation measures.

The mitigated scenario presents criteria air pollutant and precursor emissions from project buildout with legislative requirements and VMVSP policies applied along with EIR mitigation measures. Daily operational emissions were quantified using CalEEMod and off-model calculations in Microsoft Excel. The VMVSP policies applied to this scenario are as follows:

- ▶ **Policy 9.50. Natural Gas Hearths Only.** Mitigated operational modeling removed all natural gas hearths. It was assumed that if electric fireplaces were installed, the electricity demand associated with electric fireplaces would be generated by the onsite renewable energy generation systems.
- ▶ **Policy 9.51. Ban on Wood-burning Fireplaces.** Mitigated operational modeling removed all conventional and non-conventional wood-burning fireplaces.

In addition, as described in the Draft EIR, Mitigation Measure GHG-2 identifies implementing all-electric buildings as a potential onsite strategy to reduce GHG emissions. When coupled with RPS, all electric buildings that do not consume any natural gas would not generate any emissions. However, the County's authority to require all-electric buildings may be restricted. Thus, emission reductions associated with all-electric design are not provided herein, and for modeling purposes, natural gas consumption is assumed.

Table 3-4 below presents the daily operational criteria air pollutant and precursor emissions taking into account VMVSP policies at full buildout. Table 3-5 below presents the daily operational criteria air pollutant and precursor emissions taking into account both VMVSP policies and mitigation measure TRA-2 at full buildout. As shown, criteria air pollutant and precursor emissions would exceed EDCAQMD thresholds for ROG and NO_x with policies and mitigation implemented.

Table 3-4 Daily Operational Criteria Air Pollutant and Precursor Emissions at Full Buildout (pounds per day)^a (Table 3.2-6 of the EIR)

Source	ROG	NO _x	CO	PM ₁₀	PM _{2.5}
Area	194	50	230	4	4
Energy	1	25	13	2	2

^a Emissions account for reductions achieved by VMVSP policies 9.50 and 9.51, along with MM GHG-2 and TRA-2.

^b Values may not add due to rounding.

^c EDCAQMD considers CO and PM₁₀ emissions significant if they would cause or contribute to violations of the CAAQS or NAAQS (EDCAQMD 2002). Use of the PM₁₀ standard as a surrogate for the assessment of PM_{2.5} impacts is considered appropriate because PM_{2.5} is a substituent of PM₁₀.

Source: CalEEMod 2022.1 (based on modeling conducted by Ascent in 2024)

Construction of several residential units was assumed to start in year 1 and be completed by the end of year 2, with operational emissions beginning immediately thereafter in year 3. Accordingly, concurrent construction and operational activities would occur from years 3 through 18, resulting in higher maximum daily emissions than either component when analyzed separately.

Combined construction and operational emissions are presented in Table 3-6 and compared with the EDCAQMD’s thresholds. The estimated construction emissions assume implementation of Mitigation Measures AQ-2a through AQ-2d; operational emissions include emissions benefits from applicable and quantifiable VMVSP policies (Policies 9.50, and 9.51). Mitigation Measures GHG-1, GHG-2, and TRA-2 are not included in the assessment. The analysis also conservatively assumes all structures would be fully occupied immediately following construction.

As shown, combined construction and operational emissions would exceed EDCAQMD’s thresholds for ROG and NO_x.

4 GREENHOUSE GASES

This section presents the GHG assessment which includes emissions estimates for short-term (construction) and long-term (operational) increases in GHG emissions. The following sections present the methods of analysis and associated GHG emissions that could result from buildout of the VMVSP.

4.1 METHODS

GHG emissions modeling associated with construction and operation of the project were assessed and quantified using standard and accepted software tools, techniques, and emission factors. The construction and operational emissions modeling and assessment is consistent with the recommendations of EDCAQMD and CARB. In addition, recent legislative requirements, VMVSP policies, and mitigation measures that result in emissions reductions are included as mitigated project scenarios. A summary of modeling methodology and calculations for construction and operational emissions is provided below.

4.1.1 Construction

GHG emissions from construction of the project were estimated using CalEEMod, version 2022.1, which was the latest tool available at the time of the analysis. Modeling inputs included project-specific land use types and sizes and construction phasing, timing and activities included in EIR Chapter 2, "Project Description," including updated inputs and project timing from the project applicant. Model defaults for all other assumptions were used for construction emission modeling. Buildout of the project was assumed to occur over an eighteen-year period beginning in 2025. Construction was assumed to progress according to the general schedule summarized in Table 3-1. See Appendix A for model outputs and detailed assumptions.

Construction of the project would result in the conversion of oak woodlands, riparian woodlands, grasslands, and wetlands. Removal of this vegetation would result in a one-time change in carbon stock. The resulting carbon dioxide (CO₂) loss was quantified using CalEEMod for the acreages shown in Table 3.3-5 in Section 3.3., "Biological Resources," of the EIR, which accounts for permanent acreage losses of riparian woodlands, forest lands, grasslands, and wetlands. Permanent reductions to oak woodlands were modeled using U.S. Department of Agriculture Forest Service's i-Tree Planting Calculator (i-Tree), version 2.6.0, to model carbon storage lost due to tree removal (USDA Forest Service 2023). However, due to the oak tree replanting requirements identified in the Oak Resources Technical Report (Appendix F of the EIR), estimated carbon sequestration associated with replanting was also quantified using i-Tree. The change (or loss) of carbon due to conversion of riparian woodlands, grasslands, and wetlands were estimated using the Vegetation module in CalEEMod, which estimates changes in carbon associated with soil and aboveground and belowground biomass due to land use change. The one-time change in carbon stock were estimated using default CO₂ accumulation rates for grasslands and shrublands and the acreages shown in Table 3.3-5 in Section 3.3., "Biological Resources," of the EIR. Both i-Tree and CalEEMod were modeled assuming a 30-year project lifetime.

4.1.2 Operation

Operational mobile, area, energy, water, solid waste, and wastewater emissions were also estimated using CalEEMod, version 2022.1. Modeling inputs included land use types, sizes, and other project details and assumptions included in the EIR, including updated input from the project applicant. Project-specific trip rates and VMT were obtained from Fehr & Peers, which were used to estimate mobile-source emissions. Fully mitigated mobile emissions include the mitigated VMT estimate identified by Fehr & Peers as a result of mitigation measure TRA-2 which shifts 25,000 square feet of commercial office use to commercial retail use. Water and wastewater emissions were modeled using project-specific water use factors by land use type in the Water Supply Assessment (WSA) included in Appendix K of the EIR. Electricity emissions factors were adjusted to account for an increase in carbon-free electricity pursuant to RPS

anticipated for future modeled years (2030 and 2045; see discussion below). Model defaults for all other assumptions were used for operation emission modeling. See Appendix A for model outputs and detailed assumptions. The new vineyards could result in N₂O emissions if nitrogen-based fertilizers are used. Potential emissions resulting from vineyard fertilizer use were calculated using emission factors from Intergovernmental Panel on Climate Change (2019) and application rates from the California Department of Food and Agriculture (2024). It was conservatively assumed nitrogen-based fertilizers would be used on all new vineyards assuming 18 acres are operational by 2030 and all 55 acres are operational by 2045.

Oak woodlands are protected by policies in the El Dorado County General Plan and County Code of Ordinances which include various replanting requirements if a project results in the permanent removal of oak trees. The resulting CO₂ sequestered as a result of tree replanting was quantified using i-Tree for the required replacement amounts discussed in the Oak Resources Technical Report, included in Appendix F of the EIR. The oak technical report addresses impacts on oak woodlands and individual oak trees and provides mitigation for those impacts. Accordingly, the project is required to mitigate all native oak tree impacts at a 1:1 inch ratio and all heritage oak trees at a 3:1 inch ratio. Each replacement tree is defined as a 1-gallon sapling or three locally collected acorns and is assumed to sequester over a 30-year life period. The total amount of CO₂ sequestered as a result of the tree planting was divided over a 30-year life span and the annual CO₂ emissions sequestered was subtracted from the project's annual GHG emissions.

4.2 RESULTS

4.2.1 Construction Emissions

Construction emissions were modeled in CalEEMod. Estimated construction GHG emissions are summarized in Table 4-1.

Table 4-1 Construction-Related Greenhouse Gas Emissions (Table 3.6-4 of the EIR)

Construction Year	MTCO _{2e}
Year 1	1,606
Year 2	1,164
Year 3	1,364
Year 4	434
Year 5	456
Year 6	428
Year 7	497
Year 8	520
Year 9	1,067
Year 10	521
Year 11	1,107
Year 12	707
Year 13	1,205
Year 14	392
Year 15	1,001
Year 16	382
Year 17	1,004
Year 18	684
Total construction emissions	14,538
One-time sequestration loss	(+)15,436
Total construction emissions with one-time sequestration loss	29,974

Notes: MTCO_{2e} = metric tons of carbon dioxide equivalent.

Source: CalEEMod version 2022.1 and USDA i-Tree version 2.6.01.2 (based on modeling conducted by Ascent in 2024).

4.2.2 Operational Emissions

Operational emissions were modeled for three scenarios: an unmitigated scenario, a partially mitigated scenario that accounts for reductions from recent legislative requirements and quantified VMVSP policies, and a mitigated scenario that accounts for reductions from recent legislative requirements, quantified VMVSP policies, and EIR mitigation. GHG emissions were modeled for two analysis years. 2030 and 2045 were modeled to align with CARB milestone years for GHG reduction planning efforts at the state level. 2045 is also the assumed the first operational year at full buildout. The scenarios are described below. Emissions were quantified using CalEEMod and off-model calculations in Microsoft Excel. See Appendix A for model outputs and detailed assumptions.

The unmitigated scenario presents GHG emissions estimates from project buildout with legislative requirements that are default in CalEEMod at the time of analysis. The unmitigated analysis does not take into account any VMVSP policies or mitigation measures.

The partially mitigated scenario presents GHG emissions from project buildout with legislative requirements and VMVSP policies applied. The EIR mitigation measures are not accounted for in this scenario. Annual operational emissions were quantified using CalEEMod and off-model calculations in Microsoft Excel.

- ▶ **RPS.** Mitigated operational modeling adjusted the electric utility provider emissions factors to account for increase in carbon-free electricity pursuant to RPS. For the two modeling years, the electrical grid emission factor was adjusted to assume 60 percent carbon-free in 2030 and 100 percent carbon-free in 2045. See Appendix A for calculations.
- ▶ **Policy 9.16. Energy Efficient Appliances.** Mitigated operational modeling assumed energy-efficient appliances (i.e., fans, dishwashers, refrigerators, and washing machines) would be installed in all residential land use types.
- ▶ **Policy 9.36. Residential Indoor Water.** Mitigated operational modeling assumed a 20 percent reduction from the 2008 Plumbing Code baseline for residential uses, or achieve the then-current Plumbing Code in effect at the time of construction.
- ▶ **Policy 9.42 Outdoor Water Conservation Measures.** Mitigated operational modeling assumed utilization of low-water consumption irrigation systems to reduce outdoor water consumption.
- ▶ **Policy 9.45 Turf Reduction.** Mitigated operational modeling assumed all non-public uses within the Plan Area shall limit the use of turf to no more than 25 percent of the total landscaped area.
- ▶ **Policy 9.51. Natural Gas Hearths Only.** Mitigated operational modeling assumed no wood-burning hearths would be installed in favor of less polluting devices, such as natural gas hearths. Mitigated operational modeling removed all conventional and non-conventional wood-burning fireplaces.

The mitigated scenario presents emissions with legislative requirements, VMVSP policies, and EIR mitigation measures. The legislative adjustments, VMVSP policies, and EIR mitigation applied to this scenario are as follows:

- ▶ **RPS and VMVSP Policies 9.16, 9.36, 9.42, 9.45, and 9.51.** The same assumptions described in the scenario above were applied.
- ▶ **Mitigation Measure GHG-2.** Revisions to Policy 9.4, Policy 9.22, and Policy 9.37.
 - **Policy 9.4. Level 2 Plug in Electric Vehicle (PEV) Charging Stations.** Mitigated operational modeling assumed amount of Level 2 PEV chargers required for Village Residential Medium, Village Residential High, and Commercial Retail Residential designations was consistent with guidance in the draft 2022 California Green Building Standards Code (CALGreen) (BSC 2021). Commercial building square footage amounts were used to determine the required number of EV chargers and TRA-2 was assumed to be implemented resulting in a 25,000 square foot shift from commercial office to commercial retail. GHG emissions reductions associated with installing PEV chargers was calculated using Sacramento Air Quality Management District's *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (GHG Handbook) (SMAQMD 2021). Modeling assumed an increase in electricity emissions as a result of additional energy demand from operating electric vehicle chargers, which was also calculated based on guidance in the GHG Handbook.
 - **Policy 9.22. Residential Rooftop Solar.** Mitigated operational modeling assumed all residential units would install 4 kilowatts [kW] of rooftop solar on each residential unit. Kilowatt-hour (kWh) of generation was estimated based on a 4-kW system in El Dorado County using the National Renewable Energy Laboratory's PVWatts Model.
 - **Policy 9.37. Residential Outdoor 30 Percent Reduction in Water Use.** Mitigated operational modeling assumed a 30 percent reduction in indoor residential water use. Water consumption was based on project specific WSA factors for individual land use types.
- ▶ **Mitigation Measure TRA-2. Shifting 25,000 square feet of commercial office space to commercial retail.** Mitigated operational modeling assumed a 25,000 square foot shift in commercial land use square footages for office and retail space in order meet the objective of TRA-2 of reducing VMT per capita. The reduced annual VMT was used to estimate mobile emissions in the mitigated operational modeling.

Other policies that would be revised per GHG-2, including Policy 9.6 (exterior electric outlets), Policy 9.13 (cool roofs), Policy 9.33 (composting) measures, were not quantified because insufficient information was available to quantify

reductions from those measures. Table 4-2 below presents the annual GHG emission estimates for each of these three scenarios for 2030 and 2045.

Table 4-2 2030 and 2045 Operational Greenhouse Gas Emissions Associated with Unmitigated and Mitigated With VMVSP Policies and EIR Measures Scenarios (metric tons per year) (Tables 3.6-5, 3.6-6, and 3.3-8 of the EIR)

Scenario	CO ₂	CH ₄	N ₂ O	HFCs ^a	Sequestration CO ₂ ^b	MTCO ₂ e
2030						
Unmitigated (Table 3.6-5 of EIR)	8,914	8	0.44	8	-2,798	6,445
With VMVSP Policies (Table 3.6-6 of EIR)	8,227	8	0.41	8	-2,798	5,762
Mitigated ^c (Table 3.6-8 of EIR)	7,623	8	0.40	8	-2,798	5,155
2045						
Unmitigated (Table 3.6-5 of EIR)	30,020	34	1.4	10	-2,798	28,498
With VMVSP Policies (Table 3.6-6 of EIR)	27,596	35	1.2	10	-2,798	26,033
Mitigated ^c (Table 3.6-8 of EIR)	26,349	34	1.2	10	-2,798	24,781

Notes: MTCO₂e = metric tons of carbon dioxide equivalent; CO₂ = carbon dioxide; CH₄ = methane; N₂O = nitrous oxide.

^a HFC amounts account for GWP.

^b Sequestration accounts for tree planting. Value presented is the annual number, assuming a 30-year project duration.

^c Emissions reductions account for mandatory quantified VMVSP policies, state regulations, and EIR mitigation measures.

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Linear, Grubbing & Land Clearing	Linear, Grubbing & Land Clearing	1/1/2025	2/5/2025	5.00	26.0	—
Linear, Grading & Excavation	Linear, Grading & Excavation	2/6/2025	7/20/2025	5.00	117	—
Linear, Drainage, Utilities, & Sub-Grade	Linear, Drainage, Utilities, & Sub-Grade	7/21/2025	11/5/2025	5.00	78.0	—
Linear, Paving	Linear, Paving	11/6/2025	12/30/2025	5.00	39.0	—
Site Preparation	Site Preparation	1/1/2025	1/9/2025	5.00	7.00	—
Grading	Grading	1/12/2025	2/7/2025	5.00	20.0	—
Building Construction	Building Construction	2/9/2025	11/21/2025	5.00	205	—

Paving	Paving	11/20/2025	12/9/2025	5.00	14.0	—
Architectural Coating	Architectural Coating	12/9/2025	12/28/2025	5.00	14.0	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Linear, Grubbing & Land Clearing	Signal Boards	Electric	Average	3.00	8.00	6.00	0.82
Linear, Grubbing & Land Clearing	Crawler Tractors	Diesel	Average	1.00	8.00	87.0	0.43
Linear, Grubbing & Land Clearing	Excavators	Diesel	Average	1.00	8.00	36.0	0.38
Linear, Grading & Excavation	Excavators	Diesel	Average	3.00	8.00	36.0	0.38
Linear, Grading & Excavation	Crawler Tractors	Diesel	Average	1.00	8.00	87.0	0.43
Linear, Grading & Excavation	Graders	Diesel	Average	1.00	8.00	148	0.41
Linear, Grading & Excavation	Rollers	Diesel	Average	2.00	8.00	36.0	0.38
Linear, Grading & Excavation	Signal Boards	Electric	Average	3.00	8.00	6.00	0.82
Linear, Grading & Excavation	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Linear, Grading & Excavation	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Linear, Grading & Excavation	Scrapers	Diesel	Average	2.00	8.00	423	0.48
Linear, Drainage, Utilities, & Sub-Grade	Scrapers	Diesel	Average	2.00	8.00	423	0.48

Linear, Drainage, Utilities, & Sub-Grade	Rough Terrain Forklifts	Diesel	Average	1.00	8.00	96.0	0.40
Linear, Drainage, Utilities, & Sub-Grade	Signal Boards	Electric	Average	3.00	8.00	6.00	0.82
Linear, Drainage, Utilities, & Sub-Grade	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Linear, Drainage, Utilities, & Sub-Grade	Graders	Diesel	Average	1.00	8.00	148	0.41
Linear, Drainage, Utilities, & Sub-Grade	Plate Compactors	Diesel	Average	1.00	8.00	8.00	0.43
Linear, Drainage, Utilities, & Sub-Grade	Pumps	Diesel	Average	1.00	8.00	11.0	0.74
Linear, Drainage, Utilities, & Sub-Grade	Air Compressors	Diesel	Average	1.00	8.00	37.0	0.48
Linear, Drainage, Utilities, & Sub-Grade	Generator Sets	Diesel	Average	1.00	8.00	14.0	0.74
Linear, Paving	Rollers	Diesel	Average	3.00	8.00	36.0	0.38
Linear, Paving	Paving Equipment	Diesel	Average	1.00	8.00	89.0	0.36
Linear, Paving	Pavers	Diesel	Average	1.00	8.00	81.0	0.42
Linear, Paving	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Linear, Paving	Signal Boards	Electric	Average	3.00	8.00	6.00	0.82
Site Preparation	Rubber Tired Dozers	Diesel	Average	3.00	8.00	367	0.40
Site Preparation	Tractors/Loaders/Backhoes	Diesel	Average	4.00	8.00	84.0	0.37
Grading	Graders	Diesel	Average	1.00	8.00	148	0.41
Grading	Excavators	Diesel	Average	2.00	8.00	36.0	0.38
Grading	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Grading	Scrapers	Diesel	Average	2.00	8.00	423	0.48
Grading	Rubber Tired Dozers	Diesel	Average	1.00	8.00	367	0.40

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2

Air Quality Degradation	N/A	N/A	N/A	N/A
-------------------------	-----	-----	-----	-----

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00

Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	A total of 50.8 acres to be graded for vertical construction, and 8.7 acres to be graded for linear construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2

Air Quality Degradation	N/A	N/A	N/A	N/A
-------------------------	-----	-----	-----	-----

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00

Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	Total 47.5 acres to be graded for vertical construction, and 11 for linear construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2

Air Quality Degradation	N/A	N/A	N/A	N/A
-------------------------	-----	-----	-----	-----

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00

Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data.
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	Total 61.3 acres to be graded for vertical construction, and 0.5 for linear.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2

Air Quality Degradation	N/A	N/A	N/A	N/A
-------------------------	-----	-----	-----	-----

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00

Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data.
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	Total 44.3 acres to be graded for vertical construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	MV vertical linear Year 5
Construction Start Date	1/1/2029
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	10.4
Location	38.64783565110025, -120.99284145657958
County	El Dorado-Mountain County
City	Unincorporated
Air District	El Dorado County AQMD
Air Basin	Mountain Counties
TAZ	407
EDFZ	4
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Condo/Townhouse	51.0	Dwelling Unit	5.90	54,060	0.00	—	130	—

Single Family Housing	110	Dwelling Unit	38.4	214,500	1,288,414	—	279	—
Strip Mall	33.3	1000sqft	5.30	33,334	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-13	Use Low-VOC Paints for Construction

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	543,834	181,278	50,001	16,667	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Site Preparation	—	—	12.0	0.00	—
Grading	—	—	37.7	0.00	—
Paving	0.00	0.00	0.00	0.00	1.21

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Condo/Townhouse	—	0%
Single Family Housing	1.21	0%
Strip Mall	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2029	0.00	204	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00

Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952
High school enrollment	13.5249583
Preschool enrollment	57.97510586
Transportation	—
Auto Access	59.70742974
Active commuting	15.10329783
Social	—

2-parent households	92.95521622
Voting	90.3118183
Neighborhood	—
Alcohol availability	89.56756063
Park access	9.867830104
Retail density	13.49929424
Supermarket access	20.99319902
Tree canopy	97.08712948
Housing	—
Homeownership	90.09367381
Housing habitability	74.47709483
Low-inc homeowner severe housing cost burden	44.87360452
Low-inc renter severe housing cost burden	48.96702169
Uncrowded housing	70.98678301
Health Outcomes	—
Insured adults	59.70742974
Arthritis	0.0
Asthma ER Admissions	68.9
High Blood Pressure	0.0
Cancer (excluding skin)	0.0
Asthma	0.0
Coronary Heart Disease	0.0
Chronic Obstructive Pulmonary Disease	0.0

2016 Voting	91.9

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data.
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	Total 49.7 acres to be graded for vertical construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

MV vertical linear Year 6 Detailed Report

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2

Air Quality Degradation	N/A	N/A	N/A	N/A
-------------------------	-----	-----	-----	-----

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00

Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data.
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	Total 44.3 acres to be graded for vertical construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8

Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952
High school enrollment	13.5249583
Preschool enrollment	57.97510586
Transportation	—
Auto Access	59.70742974

Active commuting	15.10329783
Social	—
2-parent households	92.95521622
Voting	90.3118183
Neighborhood	—
Alcohol availability	89.56756063
Park access	9.867830104
Retail density	13.49929424
Supermarket access	20.99319902
Tree canopy	97.08712948
Housing	—
Homeownership	90.09367381
Housing habitability	74.47709483
Low-inc homeowner severe housing cost burden	44.87360452
Low-inc renter severe housing cost burden	48.96702169
Uncrowded housing	70.98678301
Health Outcomes	—
Insured adults	59.70742974
Arthritis	0.0
Asthma ER Admissions	68.9
High Blood Pressure	0.0
Cancer (excluding skin)	0.0
Asthma	0.0
Coronary Heart Disease	0.0
Chronic Obstructive Pulmonary Disease	0.0
Diagnosed Diabetes	0.0
Life Expectancy at Birth	58.0

Cognitively Disabled	10.2
Physically Disabled	36.0
Heart Attack ER Admissions	47.6
Mental Health Not Good	0.0
Chronic Kidney Disease	0.0
Obesity	0.0
Pedestrian Injuries	43.9
Physical Health Not Good	0.0
Stroke	0.0
Health Risk Behaviors	—
Binge Drinking	0.0
Current Smoker	0.0
No Leisure Time for Physical Activity	0.0
Climate Change Exposures	—
Wildfire Risk	7.7
SLR Inundation Area	0.0
Children	79.8
Elderly	6.6
English Speaking	83.0
Foreign-born	13.8
Outdoor Workers	19.7
Climate Change Adaptive Capacity	—
Impervious Surface Cover	96.5
Traffic Density	38.4
Traffic Access	0.0
Other Indices	—
Hardship	46.4

Other Decision Support	—
2016 Voting	91.9

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	A total of 54.7 acres to be graded for vertical construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	MV vertical linear Year 8
Construction Start Date	1/1/2032
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	10.4
Location	38.64783565110025, -120.99284145657958
County	El Dorado-Mountain County
City	Unincorporated
Air District	El Dorado County AQMD
Air Basin	Mountain Counties
TAZ	407
EDFZ	4
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Condo/Townhouse	51.0	Dwelling Unit	5.90	54,060	0.00	—	130	—

Apartments Low Rise	76.0	Dwelling Unit	3.90	80,560	0.00	—	193	—
Single Family Housing	110	Dwelling Unit	38.4	214,500	1,288,414	—	279	—
General Office Building	41.7	1000sqft	4.60	41,667	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-13	Use Low-VOC Paints for Construction

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8

Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	A total of 52.7 acres to be graded for vertical construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00

Solid Waste	0.00
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	Total 48.9 acres to be graded for vertical and 4.7 acres for linear.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1

Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	A total of 63.9 acres to be graded for vertical construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	MV vertical linear Year 11
Construction Start Date	1/1/2035
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	10.4
Location	38.64783565110025, -120.99284145657958
County	El Dorado-Mountain County
City	Unincorporated
Air District	El Dorado County AQMD
Air Basin	Mountain Counties
TAZ	407
EDFZ	4
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Condo/Townhouse	51.0	Dwelling Unit	5.90	54,060	0.00	—	130	—

Apartments Low Rise	63.0	Dwelling Unit	3.20	66,780	0.00	—	160	—
Single Family Housing	110	Dwelling Unit	38.4	214,500	1,288,414	—	279	—
General Office Building	41.7	1000sqft	4.60	41,667	0.00	—	—	—
Road Construction	0.80	Mile	3.70	0.00	0.00	—	—	—
City Park	6.50	Acre	6.50	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-13	Use Low-VOC Paints for Construction

2. Emissions Summary

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2

Air Quality Degradation	N/A	N/A	N/A	N/A
-------------------------	-----	-----	-----	-----

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00

Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952
High school enrollment	13.5249583
Preschool enrollment	57.97510586
Transportation	—
Auto Access	59.70742974
Active commuting	15.10329783
Social	—
2-parent households	92.95521622

Voting	90.3118183
Neighborhood	—
Alcohol availability	89.56756063
Park access	9.867830104
Retail density	13.49929424
Supermarket access	20.99319902
Tree canopy	97.08712948
Housing	—
Homeownership	90.09367381
Housing habitability	74.47709483
Low-inc homeowner severe housing cost burden	44.87360452
Low-inc renter severe housing cost burden	48.96702169
Uncrowded housing	70.98678301
Health Outcomes	—
Insured adults	59.70742974
Arthritis	0.0
Asthma ER Admissions	68.9
High Blood Pressure	0.0
Cancer (excluding skin)	0.0
Asthma	0.0
Coronary Heart Disease	0.0
Chronic Obstructive Pulmonary Disease	0.0
Diagnosed Diabetes	0.0
Life Expectancy at Birth	58.0
Cognitively Disabled	10.2
Physically Disabled	36.0
Heart Attack ER Admissions	47.6

Mental Health Not Good	0.0
Chronic Kidney Disease	0.0
Obesity	0.0
Pedestrian Injuries	43.9
Physical Health Not Good	0.0
Stroke	0.0
Health Risk Behaviors	—
Binge Drinking	0.0
Current Smoker	0.0

2016 Voting	91.9

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	Total 58.6 acres to be graded for vertical and 3.7 acres for linear.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1

Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data 779 students for Middle School
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	A total of 71.7 acres to be graded for vertical construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

Site Preparation	Site Preparation	1/1/2037	1/11/2037	5.00	7.00	—

Grading	Grading	1/12/2037	2/8/2037	5.00	20.0	—
Building Construction	Building Construction	2/9/2037	11/22/2037	5.00	205	—
Paving	Paving	11/23/2037	12/10/2037	5.00	14.0	—
Architectural Coating	Architectural Coating	12/11/2037	12/30/2037	5.00	14.0	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Linear, Grubbing & Land Clearing	Signal Boards	Electric	Average	5.00	8.00	6.00	0.82
Linear, Grubbing & Land Clearing	Crawler Tractors	Diesel	Average	1.00	8.00	87.0	0.43
Linear, Grubbing & Land Clearing	Excavators	Diesel	Average	1.00	8.00	36.0	0.38
Linear, Grading & Excavation	Excavators	Diesel	Average	3.00	8.00	36.0	0.38
Linear, Grading & Excavation	Crawler Tractors	Diesel	Average	1.00	8.00	87.0	0.43
Linear, Grading & Excavation	Graders	Diesel	Average	1.00	8.00	148	0.41
Linear, Grading & Excavation	Rollers	Diesel	Average	2.00	8.00	36.0	0.38
Linear, Grading & Excavation	Signal Boards	Electric	Average	5.00	8.00	6.00	0.82
Linear, Grading & Excavation	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Linear, Grading & Excavation	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Linear, Grading & Excavation	Scrapers	Diesel	Average	2.00	8.00	423	0.48

Linear, Drainage, Utilities, & Sub-Grade	Scrapers	Diesel	Average	2.00	8.00	423	0.48
Linear, Drainage, Utilities, & Sub-Grade	Rough Terrain Forklifts	Diesel	Average	1.00	8.00	96.0	0.40
Linear, Drainage, Utilities, & Sub-Grade	Signal Boards	Electric	Average	5.00	8.00	6.00	0.82
Linear, Drainage, Utilities, & Sub-Grade	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Linear, Drainage, Utilities, & Sub-Grade	Graders	Diesel	Average	1.00	8.00	148	0.41
Linear, Drainage, Utilities, & Sub-Grade	Plate Compactors	Diesel	Average	1.00	8.00	8.00	0.43
Linear, Drainage, Utilities, & Sub-Grade	Pumps	Diesel	Average	1.00	8.00	11.0	0.74
Linear, Drainage, Utilities, & Sub-Grade	Air Compressors	Diesel	Average	1.00	8.00	37.0	0.48
Linear, Drainage, Utilities, & Sub-Grade	Generator Sets	Diesel	Average	1.00	8.00	14.0	0.74
Linear, Paving	Rollers	Diesel	Average	3.00	8.00	36.0	0.38
Linear, Paving	Paving Equipment	Diesel	Average	1.00	8.00	89.0	0.36
Linear, Paving	Pavers	Diesel	Average	1.00	8.00	81.0	0.42
Linear, Paving	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Linear, Paving	Signal Boards	Electric	Average	5.00	8.00	6.00	0.82
Site Preparation	Rubber Tired Dozers	Diesel	Average	3.00	8.00	367	0.40
Site Preparation	Tractors/Loaders/Backhoes	Diesel	Average	4.00	8.00	84.0	0.37
Grading	Graders	Diesel	Average	1.00	8.00	148	0.41
Grading	Excavators	Diesel	Average	2.00	8.00	36.0	0.38
Grading	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Grading	Scrapers	Diesel	Average	2.00	8.00	423	0.48

Grading	Rubber Tired Dozers	Diesel	Average	1.00	8.00	367	0.40
Building Construction	Forklifts	Diesel	Average	3.00	8.00	82.0	0.20
Building Construction	Generator Sets	Diesel	Average	1.00	8.00	14.0	0.74
Building Construction	Cranes	Diesel	Average	1.00	7.00	367	0.29
Building Construction	Welders	Diesel	Average	1.00	8.00	46.0	0.45
Building Construction	Tractors/Loaders/Backhoes	Diesel	Average	3.00	7.00	84.0	0.37
Paving	Pavers	Diesel	Average	2.00	8.00	81.0	0.42
Paving	Paving Equipment	Diesel	Average	2.00	8.00	89.0	0.36
Paving	Rollers	Diesel	Average	2.00	8.00	36.0	0.38
Architectural Coating	Air Compressors	Diesel	Average	1.00	6.00	37.0	0.48

5.2.2. Mitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Linear, Grubbing & Land Clearing	Signal Boards	Electric	Average	5.00	8.00	6.00	0.82

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8

Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	Total 70.8 acres to be graded for vertical and 1.5 acres for linear.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1

Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952
High school enrollment	13.5249583
Preschool enrollment	57.97510586
Transportation	—

Auto Access	59.70742974
Active commuting	15.10329783
Social	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data 779 students for Middle School
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	A total of 49.3 acres to be graded for vertical construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Linear, Grubbing & Land Clearing	Linear, Grubbing & Land Clearing	1/1/2039	2/7/2039	5.00	26.0	—
Linear, Grading & Excavation	Linear, Grading & Excavation	2/8/2039	7/20/2039	5.00	117	—
Linear, Drainage, Utilities, & Sub-Grade	Linear, Drainage, Utilities, & Sub-Grade	7/21/2039	11/7/2039	5.00	78.0	—
Linear, Paving	Linear, Paving	11/8/2039	12/30/2039	5.00	39.0	—
Site Preparation	Site Preparation	1/1/2039	1/12/2039	5.00	8.00	—

Grading	Grading	1/13/2039	2/9/2039	5.00	20.0	—
Building Construction	Building Construction	2/10/2039	11/18/2039	5.00	202	—
Paving	Paving	11/19/2039	12/9/2039	5.00	15.0	—
Architectural Coating	Architectural Coating	12/10/2039	12/30/2039	5.00	15.0	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Linear, Grubbing & Land Clearing	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82
Linear, Grubbing & Land Clearing	Crawler Tractors	Diesel	Average	1.00	8.00	87.0	0.43
Linear, Grubbing & Land Clearing	Excavators	Diesel	Average	1.00	8.00	36.0	0.38
Linear, Grading & Excavation	Excavators	Diesel	Average	3.00	8.00	36.0	0.38
Linear, Grading & Excavation	Crawler Tractors	Diesel	Average	1.00	8.00	87.0	0.43
Linear, Grading & Excavation	Graders	Diesel	Average	1.00	8.00	148	0.41
Linear, Grading & Excavation	Rollers	Diesel	Average	2.00	8.00	36.0	0.38
Linear, Grading & Excavation	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82
Linear, Grading & Excavation	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Linear, Grading & Excavation	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Linear, Grading & Excavation	Scrapers	Diesel	Average	2.00	8.00	423	0.48

Linear, Drainage, Utilities, & Sub-Grade	Scrapers	Diesel	Average	2.00	8.00	423	0.48
Linear, Drainage, Utilities, & Sub-Grade	Rough Terrain Forklifts	Diesel	Average	1.00	8.00	96.0	0.40
Linear, Drainage, Utilities, & Sub-Grade	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82
Linear, Drainage, Utilities, & Sub-Grade	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Linear, Drainage, Utilities, & Sub-Grade	Graders	Diesel	Average	1.00	8.00	148	0.41
Linear, Drainage, Utilities, & Sub-Grade	Plate Compactors	Diesel	Average	1.00	8.00	8.00	0.43
Linear, Drainage, Utilities, & Sub-Grade	Pumps	Diesel	Average	1.00	8.00	11.0	0.74
Linear, Drainage, Utilities, & Sub-Grade	Air Compressors	Diesel	Average	1.00	8.00	37.0	0.48
Linear, Drainage, Utilities, & Sub-Grade	Generator Sets	Diesel	Average	1.00	8.00	14.0	0.74
Linear, Paving	Rollers	Diesel	Average	3.00	8.00	36.0	0.38
Linear, Paving	Paving Equipment	Diesel	Average	1.00	8.00	89.0	0.36
Linear, Paving	Pavers	Diesel	Average	1.00	8.00	81.0	0.42
Linear, Paving	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Linear, Paving	Signal Boards	Electric	Average	1.00	8.00	6.00	0.82
Site Preparation	Rubber Tired Dozers	Diesel	Average	3.00	8.00	367	0.40
Site Preparation	Tractors/Loaders/Backhoes	Diesel	Average	4.00	8.00	84.0	0.37
Grading	Graders	Diesel	Average	1.00	8.00	148	0.41
Grading	Excavators	Diesel	Average	2.00	8.00	36.0	0.38
Grading	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Grading	Scrapers	Diesel	Average	2.00	8.00	423	0.48

Grading	Rubber Tired Dozers	Diesel	Average	1.00	8.00	367	0.40
Building Construction	Forklifts	Diesel	Average	3.00	8.00	82.0	0.20
Building Construction	Generator Sets	Diesel	Average	1.00	8.00	14.0	0.74
Building Construction	Cranes	Diesel	Average	1.00	7.00	367	0.29

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	434,363	144,788	62,501	20,834	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Linear, Grading & Excavation	—	—	3.70	0.00	—
Site Preparation	—	—	12.0	0.00	—
Grading	—	—	37.3	0.00	—
Paving	0.00	0.00	0.00	0.00	4.91

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Condo/Townhouse	—	0%
Apartments Low Rise	—	0%
Single Family Housing	1.21	0%
General Office Building	0.00	0%
Road Construction	3.70	100%
City Park	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2039	117	204	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8

Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952
High school enrollment	13.5249583
Preschool enrollment	57.97510586
Transportation	—
Auto Access	59.70742974

Active commuting	15.10329783
Social	—
2-parent households	92.95521622
Voting	90.3118183
Neighborhood	—
Alcohol availability	89.56756063
Park access	9.867830104
Retail density	13.49929424
Supermarket access	20.99319902
Tree canopy	97.08712948
Housing	—
Homeownership	90.09367381
Housing habitability	74.47709483
Low-inc homeowner severe housing cost burden	44.87360452
Low-inc renter severe housing cost burden	48.96702169
Uncrowded housing	70.98678301
Health Outcomes	—
Insured adults	59.70742974
Arthritis	0.0
Asthma ER Admissions	68.9
High Blood Pressure	0.0
Cancer (excluding skin)	0.0
Asthma	0.0
Coronary Heart Disease	0.0
Chronic Obstructive Pulmonary Disease	0.0
Diagnosed Diabetes	0.0
Life Expectancy at Birth	58.0

Hardship	46.4

Other Decision Support	—
2016 Voting	91.9

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	Total 49.3 acres to be graded for vertical and 3.7 acres for linear.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1

Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data.
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	A total of 42 acres to be graded for vertical construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8

Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	Total 47.6 acres to be graded for vertical and 2.5 acres for linear.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	MV vertical linear Year 18
Construction Start Date	1/1/2042
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	10.4
Location	38.64783565110025, -120.99284145657958
County	El Dorado-Mountain County
City	Unincorporated
Air District	El Dorado County AQMD
Air Basin	Mountain Counties
TAZ	407
EDFZ	4
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Condo/Townhouse	33.0	Dwelling Unit	3.80	34,980	0.00	—	84.0	—

Apartments Low Rise	0.00	Dwelling Unit	0.00	0.00	0.00	—	0.00	—
Single Family Housing	104	Dwelling Unit	36.3	202,800	1,218,137	—	264	—
General Office Building	41.7	1000sqft	4.60	41,664	0.00	—	—	—
Strip Mall	0.00	1000sqft	0.00	0.00	0.00	—	—	—
City Park	6.40	Acre	6.40	0.00	0.00	0.00	—	—
Elementary School	614	Student	16.0	51,332	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-13	Use Low-VOC Paints for Construction

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	481,505	160,502	139,494	46,498	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Site Preparation	—	—	12.0	0.00	—
Grading	—	—	55.1	0.00	—
Paving	0.00	0.00	0.00	0.00	1.15

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Condo/Townhouse	—	0%
Apartments Low Rise	—	0%
Single Family Housing	1.15	0%
General Office Building	0.00	0%
Strip Mall	0.00	0%
City Park	0.00	0%
Elementary School	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2042	0.00	204	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14
Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1

Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967
Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952
High school enrollment	13.5249583
Preschool enrollment	57.97510586
Transportation	—

Auto Access	59.70742974

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data.
Construction: Construction Phases	Per Client's data.
Construction: Dust From Material Movement	A total of 67.1 acres to be graded for vertical construction.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14

Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967

Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952
High school enrollment	13.5249583
Preschool enrollment	57.97510586
Transportation	—
Auto Access	59.70742974
Active commuting	15.10329783
Social	—
2-parent households	92.95521622
Voting	90.3118183
Neighborhood	—
Alcohol availability	89.56756063
Park access	9.867830104
Retail density	13.49929424
Supermarket access	20.99319902
Tree canopy	97.08712948
Housing	—
Homeownership	90.09367381
Housing habitability	74.47709483
Low-inc homeowner severe housing cost burden	44.87360452
Low-inc renter severe housing cost burden	48.96702169
Uncrowded housing	70.98678301
Health Outcomes	—
Insured adults	59.70742974
Arthritis	0.0

Asthma ER Admissions	68.9
High Blood Pressure	0.0
Cancer (excluding skin)	0.0
Asthma	0.0
Coronary Heart Disease	0.0
Chronic Obstructive Pulmonary Disease	0.0
Diagnosed Diabetes	0.0
Life Expectancy at Birth	58.0
Cognitively Disabled	10.2
Physically Disabled	36.0
Heart Attack ER Admissions	47.6

2016 Voting	91.9

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per client's data.
Construction: Dust From Material Movement	No grading is assumed for rock separating.
Construction: Off-Road Equipment	Per client's data.
Construction: Trips and VMT	Per client's data.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	MV trail Year 3
Construction Start Date	1/1/2027
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	10.4
Location	38.64783565110025, -120.99284145657958
County	El Dorado-Mountain County
City	Unincorporated
Air District	El Dorado County AQMD
Air Basin	Mountain Counties
TAZ	407
EDFZ	4
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
User Defined Recreational	10,674	User Defined Unit	1.50	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-13	Use Low-VOC Paints for Construction

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Grading	—	—	—	—
Grading	Worker	10.0	14.3	LDA,LDT1,LDT2
Grading	Vendor	—	8.80	HHDT,MHDT
Grading	Hauling	0.00	20.0	HHDT
Grading	Onsite truck	—	—	HHDT

5.3.2. Mitigated

Phase Name	Trip Type	One-Way Trips per Day	Miles per Trip	Vehicle Mix
Grading	—	—	—	—
Grading	Worker	10.0	14.3	LDA,LDT1,LDT2
Grading	Vendor	—	8.80	HHDT,MHDT
Grading	Hauling	0.00	20.0	HHDT
Grading	Onsite truck	—	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
------------	------------------------------------------	------------------------------------------	----------------------------------------------	----------------------------------------------	-----------------------------

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Grading	0.00	—	1.50	0.00	—

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
User Defined Recreational	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2027	0.00	204	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.1.2. Mitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14

Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967

Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952
High school enrollment	13.5249583
Preschool enrollment	57.97510586
Transportation	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per client's data.
Construction: Dust From Material Movement	Per client's data.
Construction: Off-Road Equipment	Per client's data.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	MV trail Year 12
Construction Start Date	1/1/2036
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.70
Precipitation (days)	10.4
Location	38.64783565110025, -120.99284145657958
County	El Dorado-Mountain County
City	Unincorporated
Air District	El Dorado County AQMD
Air Basin	Mountain Counties
TAZ	407
EDFZ	4
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
User Defined Recreational	10,674	User Defined Unit	1.50	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers
Construction	C-10-A	Water Exposed Surfaces
Construction	C-13	Use Low-VOC Paints for Construction

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.0	annual days of extreme heat
Extreme Precipitation	11.2	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	50.3	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events.

Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	0	0	0	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	1	1	1	2
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	76.9
AQ-PM	14.3
AQ-DPM	7.14

Drinking Water	50.2
Lead Risk Housing	7.50
Pesticides	19.8
Toxic Releases	14.8
Traffic	64.2
Effect Indicators	—
CleanUp Sites	17.1
Groundwater	43.8
Haz Waste Facilities/Generators	56.4
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	34.9
Cardio-vascular	29.4
Low Birth Weights	60.6
Socioeconomic Factor Indicators	—
Education	23.7
Housing	29.7
Linguistic	8.49
Poverty	39.2
Unemployment	70.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	56.10162967

Employed	51.71307584
Median HI	78.26254331
Education	—
Bachelor's or higher	64.07031952
High school enrollment	13.5249583

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	23.0
Healthy Places Index Score for Project Location (b)	69.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Per client's data
Construction: Construction Phases	Per client's data.
Construction: Dust From Material Movement	Per client's data
Construction: Off-Road Equipment	Per client's data.
Construction: On-Road Fugitive Dust	Paved road dust percentage updated per discussions with team
