

4. Labor Market

The labor market is a significant indicator of the economic and social condition of a community. It identifies labor trends in the area, defines the supply and demand for employment, and indicates the strengths of the businesses that are supporting that demand. From labor market information, conclusions can be drawn about the economic motivation of the county's population, the availability of jobs, the social climate of the area, and the standards of living.

In analyzing the status of a community's labor force, the following definitions may be helpful:

- Labor force is equal to employment plus unemployment.
- Employment refers to people working at least one hour per week.
- Unemployment refers to people working less than one hour per week, but actively seeking work during that week.
- Unemployment rate is equal to unemployment divided by labor force.

The U.S. Department of Labor, Bureau of Labor Statistics uses the twelfth of each month to determine a person's employment status. This date was originally chosen because at one time, there were no holidays in the week that included the twelfth. Although that may not be true now, mid-month time periods are less volatile to changes in the overall business climate.

The average unemployment rate in El Dorado County from 1990 to 2005 was 5.7 percent. Tracking monthly unemployment trends during that time revealed seasonal changes in the level of employment. In El Dorado County there have been, on average, significant declines in unemployment (increases in employment) from February through August. During this period, unemployment dropped, on average, from 6.5 percent to 5 percent,

before it began to rise again. This may be largely driven by seasonal tourism and recreation-related jobs in the area. There are approximately 10,490 travel-generated jobs in the area (12.6 of total employment), and it is a common trend for some of these jobs to disappear as the peak travel seasons of spring and summer begin to slow. The unemployment rate is likely stabilized by the large amount of winter recreation in the area. However, to assume that all of the gains during these periods are exclusive to recreation and tourism would be inaccurate. As people begin receiving income, they typically spend it on unrelated goods and services within their communities. As the demand increases for these goods and services, employment levels are expected to rise to meet the demand. In addition, timber and agriculture-related jobs are other factors relevant to employment trends.

Labor Force

Overview

Increases in labor force indicate economic growth in an area, making the percentage of change in labor force from year to year important to prospective business owners looking for new areas in which to develop. In addition to employed workers and unemployed county residents actively seeking work, the labor force includes workers who have been laid off and are waiting to be called back to work. Labor force does not include people who are in prisons, mental hospitals, nursing homes, or those under the age of sixteen.

El Dorado County

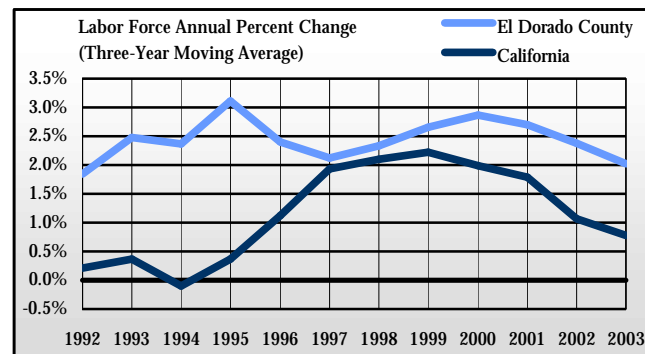

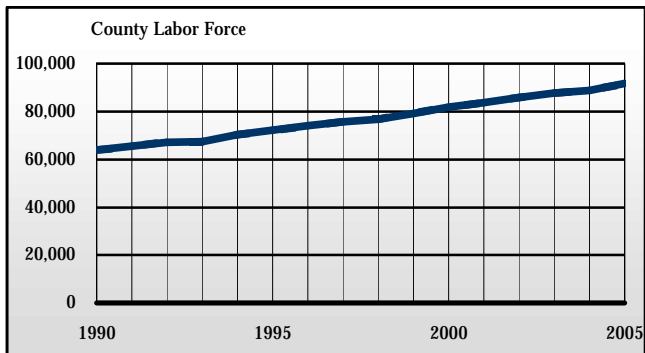

In 2005, 91,700 residents, or 53 percent of El Dorado County's population, were members of the labor force, compared to 49 percent in California. The labor force has increased steadily over the last twenty years, with a 3 percent growth in 2005. This steady increase indicates a thriving economy and a perpetual increase in available employment and business growth.

The city of South Lake Tahoe boasted the strongest labor force in El Dorado County, with 15,100 members in 2005 and a 30 percent growth between 1990 and 2005. During the same time, the city of Placerville also saw a 30 percent increase in the labor force.

Total Labor Force, Cities and County

Year	Placerville	South Lake Tahoe	El Dorado County	Annual percent change
1990	3,710	13,280	63,900	n/a

Total Employment

Overview

The California Employment Development Department (EDD) defines employment by place of residence, or the estimated number of county residents who are employed, regardless of whether they work in the county. "Civilian employment includes all individuals who worked at least one hour for a wage or salary, were self employed, or were working at least fifteen unpaid hours in a family business or on a family farm during the week including the twelfth of the month. Those who were on vacation, other kinds of leave, or involved in a labor dispute, were also counted as employed."

Total employment indicates the overall health of the economy. A decrease in employment indicates a slowing of the economy in a given area and directly impacts consumer spending and local development. However, an increase in employment indicates a rise in consumer spending and local development. A city with a steadily increasing employment rate is more likely to attract new residents and gain more wealth.

Total Employment by Cities, County

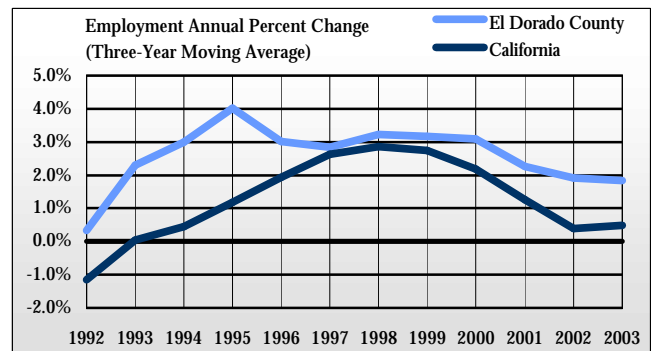

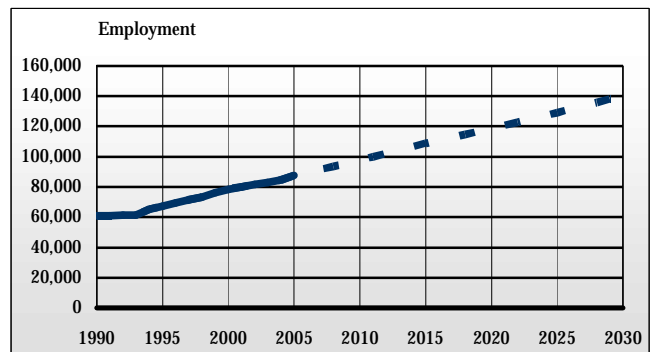

Year	Placerville	South Lake Tahoe	El Dorado County	Annual percent change
1990	3,460	12,460	61,000	n/a
1991	3,460	12,460	61,100	-1.8%

2030(p)	n/a	n/a	140,406	n/a

Source: California Employment Development Department

El Dorado County

As of 2003, 87,600 members, or 95.5 percent of El Dorado County's labor force, were employed, a 3.5 percent increase from the preceding year. In comparison, 94.5 percent of California's total labor force was employed in the same year. Total employment has experienced steady growth the past fifteen years, and this steady growth indicates an increase in spending power for the average worker in El Dorado County and ultimately means greater economic strength for the county in the years to come.

In the city of South Lake Tahoe, 14,200 members of the labor force were employed as of 2005, the highest number in any city in El Dorado County. This total is followed by 4,900 employed residents in the city of Placerville.

Unemployment

Overview

Unemployment figures for a given month include people who are not working but were able, available, and actively seeking work during the week that included the twelfth of that month. Any person who has been laid off and is waiting to be called back to work, including an individual waiting to report to a new job within thirty days, is also considered unemployed.

Like the labor force, the unemployment rate excludes those who are not actively seeking work, are not between the ages of 16 and 65, or are institutionalized or otherwise unavailable for work.

Many fluctuations occur in the labor force regarding unemployment. When unemployment rates rise, employment may decrease, but the number of people actively seeking work may increase at the same time.

Although unemployment is an important economic factor, taken alone it is not a reliable source on which to base assumptions about the health of an economy.

El Dorado County

In 2005, 4,100 members of El Dorado County's labor force were unemployed, making up 4.5 percent of the labor force. El Dorado County's unemployment rate has been consistently lower than the California average since 1990. For example, when statewide unemployment swelled to 9.5 percent in 1993, El Dorado County's unemployment rate was at 8.7 percent. This number steadily decreased through 2001 before beginning to rise again until 2004.

Total Unemployment by City or Town

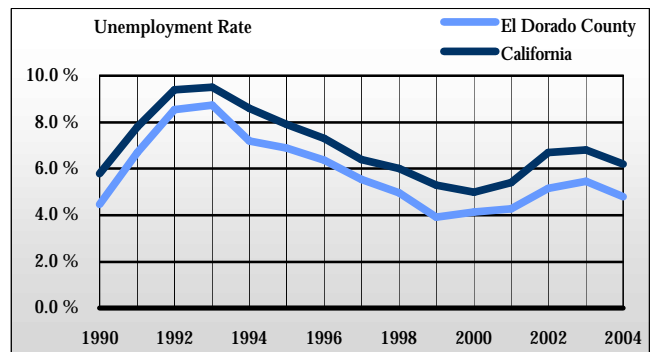

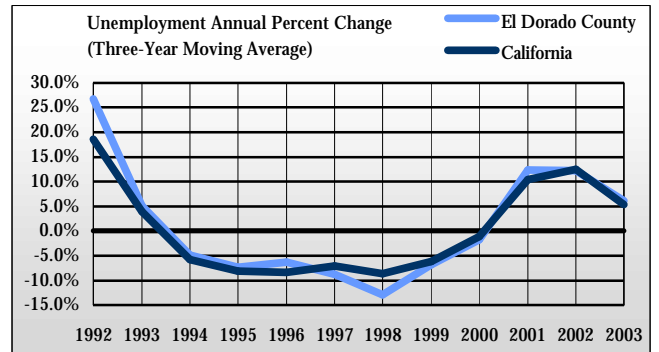

Year	South Lake	
	Placerville	Tahoe
1990	240	800
1991	370	1,210

Average Monthly Labor Statistics

Overview

Average monthly labor statistics are used to predict seasonal trends in unemployment. Agriculturally dependent areas tend to experience month-to-month fluctuations in unemployment that cannot be seen using the annual average. Variation in average monthly unemployment tends to reflect harvesting and planting seasons. Typically, the period of May through October experiences the lowest unemployment, while January through March experiences the highest. This indicator is especially important in Northern California where agriculture remains the dominant industry.

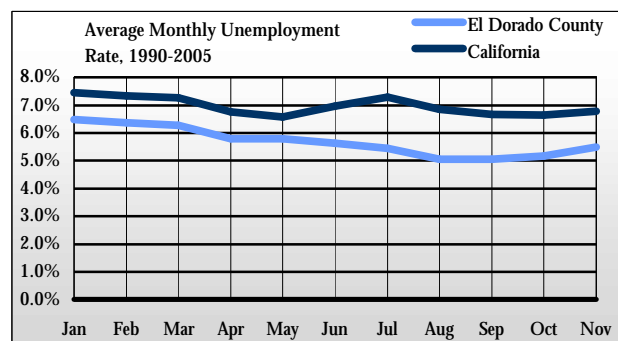

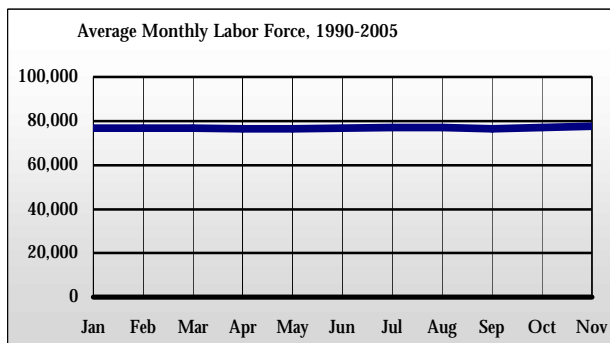

El Dorado County

Between 1990 and 2005, unemployment was lowest in June through December. The highest unemployment rates occurred in January through March, peaking in January at 6.5 percent and decreasing throughout the year. In all cases, the average monthly unemployment rate for El Dorado County was lower than the statewide average.

Average Monthly Labor Statistics, 2005
