

**EL DORADO COUNTY PLANNING SERVICES
2850 FAIRLANE COURT
PLACERVILLE, CA 95667**

**ENVIRONMENTAL CHECKLIST FORM
AND DISCUSSION OF IMPACTS**

Project Title: P06-0042 / Meyers Ranch parcel Map

Lead Agency Name and Address: El Dorado County, 2850 Fairlane Court, Placerville, CA 95667

Contact Person: Aaron Mount

Phone Number: (530) 621-5355

Property Owner's Name and Address: Nancy Dau, 6340 Grizzly Flat Road, Somerset. CA 95684

Project Applicant's Name and Address: Nancy Dau, 6340 Grizzly Flat Road, Somerset. CA 95684

Project Agent's Name and Address: Carlton Engineering, 3883 Ponderosa Road, Shingle Springs, CA 95682

Project Engineer's / Architect's Name and Address:

Carlton Engineering, 3883 Ponderosa Road, Shingle Springs, CA 95682

Project Location: The property is located on the south side of Grizzly Flat Road one mile east of the intersection with Mt. Aukum Road (E16) in the Somerset area.

Assessor's Parcel Number(s): 093-210-11

Zoning: Planned Agricultural Twenty-acre (PA-20)

Section: 8 **T:** 9N **R:** 12E

General Plan Designation: Rural Residential-Agricultural District (RR-A)

Description of Project: Tentative parcel map creating four (4) parcels ranging in size from 20 to 46.83 acres from a 110.83 acre site.

Surrounding Land Uses and Setting:

	Zoning	General Plan	Land Use/Improvements
Site	PA-20	RR-A	Single Family Residence's/Ag Uses
North	RE-5 RE-10 PA-20	RR-A	Single Family Residence's/Undeveloped/Ag Uses
South	PA-20 RA-20	RR-A	Single Family Residence's /Ag Uses
East	PA-20 AE RE-10	RR-A	Single Family Residence's /Ag Uses
West	PA-20	RR-A	Single Family Residence's

Briefly Describe the environmental setting: The subject site is at an average elevation of 2,400 feet above mean sea level. Improvements include two residences and multiple agricultural structures. Native vegetation is dominated by oak woodland, riparian, and lacustrine wetlands associated with two manmade ponds. Agricultural uses include a fairly large improved pasture and a vineyard. Access is provided by Grizzly Flat Road, a paved county maintained road, and Meyers Lane, a private gravel road of standard width. The subject parcel is fairly level, slopes varying from five percent to fifty percent, with only four percent comprising slopes greater than 30 percent and an average slope of twelve percent. Two seasonal drainages are found on the parcel which feed a

Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement.): El Dorado County (EDC) Surveyor's Office, EDC Environmental Management/Air Quality Management District, EDC Department of Transportation

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

	Aesthetics		Agriculture Resources		Air Quality
	Biological Resources	X	Cultural Resources		Geology / Soils
	Hazards & Hazardous Materials		Hydrology / Water Quality		Land Use / Planning
	Mineral Resources		Noise		Population / Housing
	Public Services		Recreation		Transportation/Traffic
	Utilities / Service Systems		Mandatory Findings of Significance		

DETERMINATION

On the basis of this initial evaluation:

- I find that the proposed project **COULD NOT** have a significant effect on the environment, and a **NEGATIVE DECLARATION** will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A **MITIGATED NEGATIVE DECLARATION** will be prepared.
- I find that the proposed project **MAY** have a significant effect on the environment, and an **ENVIRONMENTAL IMPACT REPORT** is required.
- I find that the proposed project **MAY** have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect: 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards; and 2) has been addressed by mitigation measures based on the earlier analysis as described in attached sheets. An **ENVIRONMENTAL IMPACT REPORT** is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects: a) have been analyzed adequately in an earlier EIR or **NEGATIVE DECLARATION**, pursuant to applicable standards; and b) have been avoided or mitigated pursuant to that earlier EIR or **NEGATIVE DECLARATION**, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature: _____ Date: July 12, 2007

Printed Name: Lawrence Appel For: El Dorado County

EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is a fair argument that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
 - a. Earlier Analysis Used. Identify and state where they are available for review.
 - b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c. Mitigation Measures. For effects that are "Less Than Significant With Mitigation Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used, or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
9. The explanation of each issue should identify:
 - a. the significance criteria or threshold, if any, used to evaluate each question; and
 - b. the mitigation measure identified, if any, to reduce the impact to less than significant.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

ENVIRONMENTAL IMPACTS

I. AESTHETICS. <i>Would the project:</i>			
a. Have a substantial adverse effect on a scenic vista?			X
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			X
c. Substantially degrade the existing visual character quality of the site and its surroundings?			X
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?		X	

Discussion:

A substantial adverse effect to Visual Resources would result in the introduction of physical features that are not characteristic of the surrounding development, substantially change the natural landscape, or obstruct an identified public scenic vista.

(a & b)

The project is not located within a designated scenic vista or state scenic highway. There would be no impact as a result of development of the proposed project.

c) The proposed project will not degrade the visual character or quality of the site and its surroundings. The surrounding area has been substantially developed with residential uses. The project will not introduce residential or agricultural development that is out of character with the surrounding existing development.

d) Some limited light and glare may result from the addition of residential structures on the parcel. These increases are expected to be normal, however, for Planned Agriculture Twenty-acre (PA-20) zone district and are not expected to have a significant effect or adversely affect day or nighttime views adjacent to the project site.

FINDING: It has been determined that there will be no impacts to aesthetic or visual resources. Identified thresholds of significance for the “Aesthetics” category have not been exceeded and no significant adverse environmental effects will result from the project.

II. AGRICULTURE RESOURCES. <i>Would the project:</i>			
a. Convert Prime Farmland, Unique Farmland, Farmland of Statewide Importance, or Locally Important Farmland (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?			X
b. Conflict with existing zoning for agricultural use, or a Williamson Act Contract?			X
c. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?			X

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

Discussion:

A substantial adverse effect to Agricultural Resources would occur if:

- There is a conversion of choice agricultural land to nonagricultural use, or impairment of the agricultural productivity of agricultural land;
- The amount of agricultural land in the County is substantially reduced; or
- Agricultural uses are subjected to impacts from adjacent incompatible land uses.

a&b)

The site is currently zoned Planned Agricultural Twenty-acre, which is an agricultural zoning. The site is actively used in agriculture. Soils on the site are identified by the California Department of Conservation as farmland of local importance. The project was reviewed by the El Dorado County Agricultural Commission and was determined that the proposed project would not have an impact on the existing agricultural resources on or adjacent to the site. The subject site is within the Somerset/Fairplay Agricultural District and the proposed parcel sizes conform to the twenty acre minimum required for parcels containing choice agricultural soils within the Agricultural District. The project site is not currently in a Williamson Act Contract; however it is adjacent to a parcel currently in the Williamson Act. There would be a less than significant impact.

- c) The project would result in the creation of additional single-family residential lots in an area characterized by rural residential land use designation within an Agricultural District. The project would not create any additional pressures on adjacent or nearby agricultural lands to convert to a non-agricultural use. There would be no impact.

FINDING: It has been determined that the project will not result in any significant impacts to agricultural lands, or properties subject to a Williamson Act Contract. The surrounding area is developed with a mix of residential and agricultural uses. For this “Agriculture” category, the identified thresholds of significance have not been exceeded and no significant adverse environmental effects will result from the project.

III. AIR QUALITY. <i>Would the project:</i>			
a. Conflict with or obstruct implementation of the applicable air quality plan?			X
b. Violate any air quality standard or contribute substantially to an existing or projected air quality violation?			X
c. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?			X
d. Expose sensitive receptors to substantial pollutant concentrations?			X
e. Create objectionable odors affecting a substantial number of people?			X

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

Discussion:

A substantial adverse effect on Air Quality would occur if:

- Emissions of ROG and No_x, will result in construction or operation emissions greater than 82lbs/day (See Table 5.2, of the El Dorado County Air Pollution Control District – CEQA Guide);
- Emissions of PM₁₀, CO, SO₂ and No_x, as a result of construction or operation emissions, will result in ambient pollutant concentrations in excess of the applicable National or State Ambient Air Quality Standard (AAQS). Special standards for ozone, CO, and visibility apply in the Lake Tahoe Air Basin portion of the County; or
- Emissions of toxic air contaminants cause cancer risk greater than 1 in 1 million (10 in 1 million if best available control technology for toxics is used) or a non-cancer Hazard Index greater than 1. In addition, the project must demonstrate compliance with all applicable District, State and U.S. EPA regulations governing toxic and hazardous emissions.

a) El Dorado County adopted the *Rules and Regulations of the El Dorado County Air Pollution Control District* (February 15, 2000) establishing rules and standards for the reduction of stationary source air pollutants (ROG / VOC, NO_x, and O₃). The proposed project will not conflict with or obstruct the implementation of this plan.

b & c)

The El Dorado County Air Quality Management District’s *Guide to Air Quality Assessment* establishes a threshold of 48 dwelling units with fireplaces or woodstoves, which would result in potentially significant ROG and No_x emissions. Vehicular emissions are based upon a trip rate of 9.53 vehicle trips per day per residence. The request for a Parcel Map will result in four parcels, each being able to develop an additional single family residence, would not result in a significant increase in ROG or No_x. Additionally, the maximum total daily vehicle trips generated would be 38.12 trips per day. Using the thresholds in the *Guide to Air Quality Assessment*, this has been determined to be less than significant.

d) Sensitive receptors include such groups as young children and elderly and such sites as schools, hospitals, day-care centers, convalescent homes, and high concentrations of single-family residences. General Plan Policy 6.7.6.1 requires that the County “Ensure that new facilities in which sensitive receptors are located (e.g., schools, child care centers, playgrounds, retirement homes, and hospitals) are sited away from significant sources of air pollution.” It has been determined that the proposed site and use will not impact any sensitive receptors in the area.

e) The PA-20 zone district does not permit activities that could generate objectionable odors. Those activities, which might result in objectionable odors, dust, or smoke, require the review and approval of a special use permit. This subsequent discretionary permit would require further environmental review addressing the potential impacts resulting from the proposed activity.

FINDING: It was determined that a less than significant impact will result from the project because it will not: obstruct implementation of the El Dorado County California Clean Air Act Plan; violate any air quality standard; result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or state ambient air quality standard; expose sensitive receptors to substantial pollutant concentrations; or create objectionable odors affecting a substantial number of people.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

IV. BIOLOGICAL RESOURCES. <i>Would the project:</i>			
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			X
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			X
c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?			X
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			X
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			X
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?			X

Discussion:

A substantial adverse effect on Biological Resources would occur if the implementation of the project would:

- Substantially reduce or diminish habitat for native fish, wildlife or plants;
- Cause a fish or wildlife population to drop below self-sustaining levels;
- Threaten to eliminate a native plant or animal community;
- Reduce the number or restrict the range of a rare or endangered plant or animal;
- Substantially affect a rare or endangered species of animal or plant or the habitat of the species; or
- Interfere substantially with the movement of any resident or migratory fish or wildlife species.

a) This Parcel Map request for four parcels will not have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.

b & c)

The United States Department of the Interior National Wetlands Inventory Map for the project area (Camino, CA Quadrangle, 1995) was reviewed to determine if any identified wetland or riparian habitat areas exist on or adjacent to the project site. This review indicates that there are mapped wetlands or riparian habitat areas on or adjacent to the project.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

A wetland delineation report was completed by Ruth A. Wilson on August 2006. The report concluded that a total of 12.1 acres of wetlands and waters of the US exist on the project site. The project does not propose to alter any identified wetlands or riparian areas on site or adjacent. All required improvements will have no effect on wetlands or riparian areas.

General Plan Policy 7.3.3.4 requires special setbacks for protection of riparian areas and wetlands. Any future development on this parcel requiring a grading or building permit will have to show compliance with the special setbacks.

Review of the California Natural Diversity Database shows no listed or species of concern have been identified in the area adjacent to the subject site.

There will be a less than significant impact on any riparian habitat, sensitive natural community, or federally protected wetlands.

- d) Review of the Planning Department GIS *Deer Ranges Map* (January 2002) indicates that there are no mapped critical deer migration corridors on the project site. The project will not substantially interfere with the movement of any native resident or migratory fish or wildlife species or with any established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites.
- e) Limited tree removal will result from the improvement of access to the proposed parcels and development of dwelling units. An approximately 400 foot length of access road will be required to be constructed to at least 24 feet with two foot shoulders. This will result in the removal of trees but the subject project will retain the necessary tree canopy as required by General Plan policy 7.4.4.4. A replacement plan will be required before finaling the parcel map for any native oaks removed on a one to one basis.
- f) The project site is not located in an area identified as critical habitat for the Red-legged Frog (*Rana aurora draytonii*), or for the Gabbro soil rare plants which are subject to the draft Recovery / Habitat Conservation Plans proposed by the U.S. Fish and Wildlife Service.

FINDING: It has been determined that all potential biological resource impacts as a result of the proposed project are less than significant. Therefore, the established thresholds for significance in the “Biological Resources” category will not be exceeded.

V. CULTURAL RESOURCES. Would the project:				
a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?			X	
b. Cause a substantial adverse change in the significance of archaeological resource pursuant to Section 15064.5?		X		
c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?				X
d. Disturb any human remains, including those interred outside of formal cemeteries?			X	

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

Discussion:

In general, significant impacts are those that diminish the integrity, research potential, or other characteristics that make a historical or cultural resource significant or important. A substantial adverse effect on Cultural Resources would occur if the implementation of the project would:

- Disrupt, alter, or adversely affect a prehistoric or historic archaeological site or a property or historic or cultural significant to a community or ethnic or social group; or a paleontological site except as a part of a scientific study;
- Affect a landmark of cultural/historical importance;
- Conflict with established recreational, educational, religious or scientific uses of the area; or
- Conflict with adopted environmental plans and goals of the community where it is located.

(a) A cultural resource study was completed by Historic Resource Associates in May of 2006. Feature A consists of the Newell House/Hotel and the Meyers Ranch, which dates to after 1936. Extensive remodeling over the past 50 years has diminished the integrity of the property, and, consequently, it does not appear to be eligible of the California Register of Historic resources or the National register of Historic Places. There would be a less than significant impact.

(b) A cultural resource study was completed by Historic Resource Associates in May of 2006. The subject site was previously surveyed in 1997 and one archaeological site on the project parcel was deemed CEQA significant. The following mitigation measure is incorporated:

Mitigation Measure 1 (Cultural Resources)

A non-disturbance easement, prepared by the applicant, measured 25 feet from the edge of Feature F, as noted in the cultural resource study dated May 30, 2006, shall be recorded with the final map. A qualified archaeologist shall accurately locate feature F so as to precisely represent the easement. Maintenance of existing structures that may fall within this setback shall be allowed. The easement shall be prepared prior to finaling the parcel map.

MONITORING: Planning Services shall verify that the required easement has been recorded prior to filing the map. Staff shall verify that a note records with the map prior to filing.

(c) The project site is not underlain by a rock type which is known to contain paleontological resources in El Dorado County. There would be no impact.

(d) In the event of the accidental discovery or recognition of any human remains in any location other than a dedicated cemetery, the steps outlined in Section 15064.5 of the CEQA Guidelines shall be implemented immediately. This is a standard subdivision and grading requirement that applies to all discretionary projects and ministerial permits.

FINDING: There are no documented cemeteries at the project site. The project site is not underlain by a rock type which is known to contain paleontological resources in El Dorado County. There are no unique geologic features. Implementation of Mitigation Measure 1 would mitigate project impacts on existing cultural resources.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

VI. GEOLOGY AND SOILS. <i>Would the project:</i>			
a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:			
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			X
ii) Strong seismic ground shaking?			X
iii) Seismic-related ground failure, including liquefaction?			X
iv) Landslides?			X
b. Result in substantial soil erosion or the loss of topsoil?			X
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994) creating substantial risks to life or property?			X
e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?			X

Discussion:

A substantial adverse effect on Geologic Resources would occur if the implementation of the project would:

- Allow substantial development of structures or features in areas susceptible to seismically induced hazards such as groundshaking, liquefaction, seiche, and/or slope failure where the risk to people and property resulting from earthquakes could not be reduced through engineering and construction measures in accordance with regulations, codes, and professional standards;
- Allow substantial development in areas subject to landslides, slope failure, erosion, subsidence, settlement, and/or expansive soils where the risk to people and property resulting from such geologic hazards could not be reduced through engineering and construction measures in accordance with regulations, codes, and professional standards; or
- Allow substantial grading and construction activities in areas of known soil instability, steep slopes, or shallow depth to bedrock where such activities could result in accelerated erosion and sedimentation or exposure of people, property, and/or wildlife to hazardous conditions (e.g., blasting) that could not be mitigated through engineering and construction measures in accordance with regulations, codes, and professional standards.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- a) As shown in the Division of Mines and Geology’s publication Fault Rupture Hazard Zones in California, there are no Alquist-Priolo Special Studies Zones mapped in El Dorado County. The impacts from fault ruptures, seismically induced ground shaking, or seismic ground failure or liquefaction are considered to be less than significant. Any potential impact caused by locating buildings in the project area will be offset by the compliance with the Uniform Building Code earthquake standards. The project is not located in an area with significant topographic variation in slope. Therefore, the potential for mudslides or landslides is less than significant.
- b) All grading activities shall comply with the El Dorado County Grading, Erosion, and Sediment Control Ordinance which will reduce any potential impacts to a less than significant level. No areas of disturbance are proposed for areas with greater than 30 percent slopes.
- c) According to the *Soil Survey of El Dorado County*, the property contains MrC, HgB, CcE, HgC, SbD, and AoB soil types. These soil types are not characterized as severely unstable soils. Compliance with the El Dorado County Grading, Erosion, and Sediment Control Ordinance will reduce any potentially significant impact to a less than significant level.
- d) The Natural Resources Conservation Service (NRCS) has mapped soils on the site as MrC, HgB, CcE, HgC, SbD, and AoB (*Soil Survey of El Dorado Area, California, 1974*). Review of the *Soil Survey of El Dorado Area* indicates that the mapped soil types for the proposed project area have a low to moderate shrink-well potential. Based upon this review, the impact from expansive soils is less than significant.
- e) El Dorado County Department of Environmental Management has approved septic systems for the proposed parcels. Perk and mantle tests have been performed and approved by Environmental Management on each proposed parcel. Any impacts from the installation of the proposed septic system for the project have been determined to be less than significant.

FINDING: No significant impacts will result from geological or seismological anomalies on the project site. The site does not contain expansive soils or other characteristics that will result in significant impacts. For the “Geology and Soils” category, established thresholds will not be exceeded by development of the project and no significant adverse environmental effects will result from the project.

VII. HAZARDS AND HAZARDOUS MATERIALS. <i>Would the project:</i>				
a.	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X
b.	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			X
c.	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			X
d.	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?			X

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

VII. HAZARDS AND HAZARDOUS MATERIALS. <i>Would the project:</i>			
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?			X
f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?			X
g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?		X	
h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?		X	

Discussion:

A substantial adverse effect due to Hazards or Hazardous Materials would occur if implementation of the project would:

- Expose people and property to hazards associated with the use, storage, transport, and disposal of hazardous materials where the risk of such exposure could not be reduced through implementation of Federal, State, and local laws and regulations;
 - Expose people and property to risks associated with wildland fires where such risks could not be reduced through implementation of proper fuel management techniques, buffers and landscape setbacks, structural design features, and emergency access; or
 - Expose people to safety hazards as a result of former on-site mining operations.
- a) Any hazardous materials utilized at the project site shall comply with the *El Dorado County Hazardous Waste Management Plan*.
 - b) No significant amounts of hazardous materials will be utilized for the project. The project will not result in any reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.
 - c) As proposed, the project will not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.
 - d) The project site is not identified on any list compiled pursuant to California Government Code 65962.5 identifying any hazardous material sites in the project vicinity. As such, there will be a less than significant impact from hazardous material sites.
 - e) *The San Francisco Sectional Aeronautical Chart*, last updated March 22, 2001, was reviewed and the project site is not located within two miles of a public airport. As such, the project is not subject to any land use limitations contained within any adopted Comprehensive Land Use Plan. There are less than significant

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

impacts to the project site resulting from public airport operations and the over-flight of aircraft in the vicinity of the project.

- e) *The San Francisco Sectional Aeronautical Chart*, last updated March 22, 2001, was reviewed and the project site is not located within two miles of a privately owned airstrip. As such, there is no significant safety hazard resulting from private airport operations and aircraft over flights in the vicinity of the project site.
- e) The proposed project will not physically interfere with the implementation of the County adopted emergency response and/or evacuation plan for the County.
- e) The Pioneer Fire Protection District reviewed the project proposal. The project will not expose people to a significant risk of loss, injury or death involving wildland fires or wildland fires adjacent to or located in an urbanized area. The subject parcel is within a very high fire hazard area but adequate offsite access exists and onsite access will be improved to above fire safe standards.

FINDING: The proposed project will not expose people and property to hazards associated with the use, storage, transport and disposal of hazardous materials, and expose people and property to risks associated with wildland fires. For this “Hazards and Hazardous Materials” category, the thresholds of significance will not be exceeded by the proposed project.

VIII. HYDROLOGY AND WATER QUALITY. <i>Would the project:</i>				
a. Violate any water quality standards or waste discharge requirements?			X	
b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?			X	
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or -off-site?			X	
d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?			X	
e. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?			X	
f. Otherwise substantially degrade water quality?			X	
g. Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?				X
h. Place within a 100-year flood hazard area structures which would impede or				X

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

VIII. HYDROLOGY AND WATER QUALITY. <i>Would the project:</i>			
redirect flood flows?			
i. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?			X
j. Inundation by seiche, tsunami, or mudflow?		X	

Discussion:

A substantial adverse effect on Hydrology and Water Quality would occur if the implementation of the project would:

- Expose residents to flood hazards by being located within the 100-year floodplain as defined by the Federal Emergency Management Agency;
 - Cause substantial change in the rate and amount of surface runoff leaving the project site ultimately causing a substantial change in the amount of water in a stream, river or other waterway;
 - Substantially interfere with groundwater recharge;
 - Cause degradation of water quality (temperature, dissolved oxygen, turbidity and/or other typical stormwater pollutants) in the project area; or
 - Cause degradation of groundwater quality in the vicinity of the project site.
- a) Any grading to improve access will require an improvement plan as required by the Department of Transportation. The plan shall be in conformance with the County of El Dorado “Design and Improvement Standards Manual”, the “Grading, Erosion and Sediment Control Ordinance”, the “Drainage Manual”, and the “Off-Street Parking and Loading Ordinance”. All stormwater and sediment control methods contained in the *Grading, Erosion and Sediment Control Ordinance* must be met during all construction activities, as well as the required development of any permanent storm drainage facilities and erosion control measures on the project site.
- b) There is no evidence that the project will substantially reduce or alter the quantity of groundwater in the vicinity, or materially interfere with groundwater recharge in the area of the proposed project. Well reports have been approved by El Dorado County Environmental Management Department for each of the proposed parcels.
- c) There is no evidence that the grading and ground disturbances associated with the project will substantially alter the existing drainage patterns on or off the site. The *Grading Erosion and Sediment Control Ordinance* contains specific requirements that limit the impacts to a drainage system (Section 15.14.440 & Section 15.14.590). The standards apply to this project.
- d & e)
 Compliance with the standards and requirements contained within the *Grading, Erosion and Sediment Control Ordinance* will limit any potential impacts to drainage ways on or adjacent to the project site, and limit erosion and siltation to a less than significant level.
- f) The project will not result in substantial degradation of water quality in either surface or sub-surface water bodies in the vicinity of the project area. All stormwater and sediment control methods contained in the *Grading, Erosion and Sediment Control Ordinance* must be met during all construction activities, as well as the

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

required development of any permanent storm drainage facilities and erosion control measures on the project site.

g & h)

The Flood Insurance Rate Map (Panel 060040 0775 B, October 18, 1983) for the project area establishes that the project site is not located within a mapped 100-year floodplain.

- i) The subject property in the El Dorado area is not located adjacent to or downstream from a dam or levee that has the potential to fail and inundate the project site with floodwaters.
- j) The potential for a seiche or tsunami is considered less than significant. Potential for a mudflow is also considered to be less than significant.

FINDING: For the “Hydrology and Water Quality” section, it has been determined the project will not exceed the identified thresholds of significance and therefore no significant adverse environmental effects will result from the project.

IX. LAND USE PLANNING. <i>Would the project:</i>			
a. Physically divide an established community?			X
b. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?			X
c. Conflict with any applicable habitat conservation plan or natural community conservation plan?			X

Discussion:

A substantial adverse effect on Land Use would occur if the implementation of the project would:

- Result in the conversion of Prime Farmland as defined by the State Department of Conservation;
- Result in conversion of land that either contains choice soils or which the County Agricultural Commission has identified as suitable for sustained grazing, provided that such lands were not assigned urban or other nonagricultural use in the Land Use Map;
- Result in conversion of undeveloped open space to more intensive land uses;
- Result in a use substantially incompatible with the existing surrounding land uses; or
- Conflict with adopted environmental plans, policies, and goals of the community.

- a) The project will not result in the physical division of an established community.
- b) The proposed project is consistent with the specific, fundamental, and mandatory land use development goals, objectives, and policies of the 2004 General Plan, and is consistent with the development standards contained

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

within the El Dorado County Zoning Ordinance. The proposed parcel sizes are consistent with the PA-20 zone district and the RR-A Land Use Designation.

- c) The project site is not located in an area identified as critical habitat for the Red-legged Frog (*Rana aurora draytonii*), or for the Gabbro soil rare plants which are subject to draft Recovery / Habitat Conservation Plans proposed by the U.S. Fish and Wildlife Service.

FINDING: For the “Land Use Planning” section, the project will not exceed the identified thresholds of significance.

X. MINERAL RESOURCES. <i>Would the project:</i>			
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?			X
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?			X

Discussion:

A substantial adverse effect on Mineral Resources would occur if the implementation of the project would:

- Result in obstruction of access to, and extraction of mineral resources classified MRZ-2x, or result in land use compatibility conflicts with mineral extraction operations.
- a) The project site is not mapped as being within a Mineral Resource Zone (MRZ) by the State of California Division of Mines and Geology or in the El Dorado County General Plan.
 - b) The Western portion of El Dorado County is divided into four, 15 minute quadrangles (Folsom, Placerville, Georgetown, and Auburn) mapped by the State of California Division of Mines and Geology showing the location of Mineral and Resource Zones (MRZ). Those areas which are designated MRZ-2a contain discovered mineral deposits that have been measured or indicate reserves calculated. Land in this category is considered to contain mineral resources of known economic importance to the County and/or State. Review of the mapped areas of the County indicates that the subject property does not contain any mineral resources of known local or statewide economic value.

FINDING: No impacts to any known mineral resources will occur as a result of the project. Therefore, no mitigation is required. In the “Mineral Resources” section, the project will not exceed the identified thresholds of significance.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

XI. NOISE. <i>Would the project result in:</i>			
a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X
b. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?			X
c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?			X
d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?			X
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise level?			X
f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?			X

Discussion:

A substantial adverse effect due to Noise would occur if the implementation of the project would:

- Result in short-term construction noise that creates noise exposures to surrounding noise sensitive land uses in excess of 60dBA CNEL;
- Result in long-term operational noise that creates noise exposures in excess of 60 dBA CNEL at the adjoining property line of a noise sensitive land use and the background noise level is increased by 3dBA, or more; or
- Results in noise levels inconsistent with the performance standards contained in Table 6-1 and Table 6-2 in the El Dorado County General Plan.

a & c)

The project will not result in a substantial increase in existing ambient noise levels in the project vicinity. The project will not generate noise levels exceeding the performance standards contained in Table 6-1 and Table 6-2 within the General Plan. As proposed, the project is not located in an area exposed to existing noise levels exceeding the performance standards contained in Table 6-1.

- b) Persons adjacent to the project vicinity will not be subjected to long-term excessive ground borne noise or ground borne vibration because of project construction or upon completion of the project.
- d) Short-term noise impacts may be associated with excavation, grading, and construction activities in the project vicinity. El Dorado County requires that all construction vehicles and equipment, fixed or mobile, be equipped with properly maintained and functioning mufflers. All construction and grading operations are required to comply with the noise performance standards contained in the General Plan. All storage, stockpiling and vehicle staging areas are required to be located as far as possible from any residential areas.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- e) The proposed project is not located adjacent to or in the vicinity of a public airport and is not subject to any noise standards contained within a Comprehensive Land Use Plan. As such, the project will not be subjected to excessive noise from a public airport.
- f) The proposed project is not located adjacent to or in the vicinity of a private airstrip. As such, the project will not be subjected to excessive noise from a private airport.

FINDING: For the “Noise” category, the thresholds of significance have not been exceeded and no significant adverse environmental effects will occur from the proposed development.

XII. POPULATION AND HOUSING. <i>Would the project:</i>			
a. Induce substantial population growth in an area, either directly (i.e., by proposing new homes and businesses) or indirectly (i.e., through extension of roads or other infrastructure)?			X
b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?			X
c. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?			X

Discussion:

A substantial adverse effect on Population and Housing would occur if the implementation of the project would:

- Create substantial growth or concentration in population;
 - Create a more substantial imbalance in the County’s current jobs to housing ratio; or
 - Conflict with adopted goals and policies set forth in applicable planning documents.
- a) The proposed project has been determined to have no growth-inducing impact as the project does not include any proposal to extend, or expand infrastructure or roads, and does not include any school or large scale employment opportunities that lead to indirect growth. Approval of the parcel map will result in the creation of four parcels. The additional parcels have the potential of development of four single family residence.
 - b. No substantial numbers of existing housing stock will be displaced by the proposed project.
 - c) No substantial numbers of people will be displaced necessitating the construction of replacement housing elsewhere.

FINDING: The project will not displace any existing or proposed housing. The project will not directly or indirectly induce significant growth by extending or expanding infrastructure to support such growth. For the “Population and Housing” section, the thresholds of significance have not been exceeded and no significant environmental impacts will result from the project.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

XIII. PUBLIC SERVICES. <i>Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:</i>			
a. Fire protection?			X
b. Police protection?			X
c. Schools?			X
d. Parks?			X
e. Other government services?			X

Discussion:

A substantial adverse effect on Public Services would occur if the implementation of the project would:

- Substantially increase or expand the demand for fire protection and emergency medical services without increasing staffing and equipment to meet the Department’s/District’s goal of 1.5 firefighters per 1,000 residents and 2 firefighters per 1,000 residents, respectively;
- Substantially increase or expand the demand for public law enforcement protection without increasing staffing and equipment to maintain the Sheriff’s Department goal of one sworn officer per 1,000 residents;
- Substantially increase the public school student population exceeding current school capacity without also including provisions to adequately accommodate the increased demand in services;
- Place a demand for library services in excess of available resources;
- Substantially increase the local population without dedicating a minimum of 5 acres of developed parklands for every 1,000 residents; or
- Be inconsistent with County adopted goals, objectives or policies.

a) **Fire Protection:** The Pioneer Fire Protection District currently provides fire protection services to the project area. Development of the project would result in a minor increase in the demand for fire protection services, but would not prevent the Fire District from meeting its response times for the project or its designated service area. The Fire Protection District will review the parcel map and building permit plans to determine compliance with their fire standards including, but not limited to: location of fire hydrants, accessibility around buildings, turning radii within parking lots, fire sprinklers within buildings, building identification and construction phasing. Fire District fees are collected prior to building permit issuance.

b) **Police Protection:** The project site will be served by the El Dorado County Sheriff’s Department with a response time depending on the location of the nearest patrol vehicle. The minimum Sheriff’s Department service standard is an 8-minute response to 80 percent of the population within Community Regions. No specific minimum level of service or response time was established for Rural Centers and Rural Regions. The Sheriff’s Department stated goal is to achieve a ratio of one sworn officer per 1,000 residents. The development of a single-family residence will not significantly impact the achievement of this goal, or significantly impact the current response times to the project area.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- c) **Schools:** The project site is located within the Pioneer Union School District. Impact to the affected school district from the proposed parcel map will be less than significant. School district fees are collected prior to building permit issuance.
- d) **Parks:** The proposed project will not substantially increase the local population necessitating the development of new park facilities. Section 16.12.090 of County Code establishes the method to calculate the required amount of land for dedication for parkland, or the in-lieu fee amount for residential projects. Provisions to provide parkland were not included as part of the project design in accordance with Section 16.12.090 of County Code. Park land in lieu fees will be assessed as a condition of approval.
- e) No other public facilities or services will be substantially impacted by the project.

FINDING: Adequate public services are available to serve the project. Therefore, there is no potential for a significant impact due to the development of the subject parcel either directly or indirectly. No significant public service impacts are expected. For this “Public Services” category, the thresholds of significance have not been exceeded.

XIV. RECREATION.			
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			X
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			X

Discussion:

A substantial adverse effect on Recreational Resources would occur if the implementation of the project would:

- Substantially increase the local population without dedicating a minimum of 5 acres of developed parklands for every 1,000 residents; or
- Substantially increase the use of neighborhood or regional parks in the area such that substantial physical deterioration of the facility would occur.

- a) The proposed project will not substantially increase the use of neighborhood or regional parks in the area such that substantial physical deterioration of the facility would occur.
- b) The project proposal does not include the provision of on-site recreation facilities, nor does it require the construction of new facilities or expansion of existing recreation facilities.

FINDING: No impacts to recreation or open space will result from the project. For this “Recreation” section, the thresholds of significance have not been exceeded.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

XV. TRANSPORTATION/TRAFFIC. <i>Would the project:</i>			
a. Cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?			X
b. Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?			X
c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?			X
d. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			X
e. Result in inadequate emergency access?			X
f. Result in inadequate parking capacity?			X
g. Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?			X

Discussion:

A substantial adverse effect on Traffic would occur if the implementation of the project would:

- Result in an increase in traffic, which is substantial in relation to the existing traffic load and capacity of the street system;
- Generate traffic volumes which cause violations of adopted level of service standards (project and cumulative); or
- Result in, or worsen, Level of Service “F” traffic congestion during weekday, peak-hour periods on any highway, road, interchange or intersection in the unincorporated areas of the county as a result of a residential development project of 5 or more units.

- a) Approval of the proposed parcel map would result in the creation of three additional residential parcels with capacity of a primary residence and a secondary residence of no greater than 1200 square feet. The project parcel will be accessed by a new road which will encroach onto Meyers Lane which is a privately maintained road. The creation of four parcels does not meet the threshold as required by the General Plan to require a traffic study in order to analyze possible mitigations.
- b) The approval of the proposed parcel map and the subsequent creation of four parcels and development of a single-family residence on each will not significantly impact the existing level of service of Grizzly Flat Road, Meyers lane, and surrounding roadways.
- c) The project will not result in a major change in established air traffic patterns for publicly or privately operated airports or landing field in the project vicinity.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- d) The proposed project does not include any design features, such as sharp curves or dangerous intersections, or incompatible uses that will substantially increase hazards. A new access road is required to be constructed which will encroach on to Meyers Lane. No traffic hazards will result from the project design.
- e) The project will not result in inadequate emergency access to any of the proposed residential structures. The proposed road exceeds fire safe standards.
- f) Section 17.18.060 of the Zoning Ordinance lists the parking requirements by use. A single-family residence requires two on-site parking spaces in tandem. Parking will be reviewed at the time of building permit plan check.
- g) The proposed project does not conflict with General Plan policies or programs supporting alternative transportation.

FINDING: For the “Transportation/Traffic” category, the identified thresholds of significance have not been exceeded and no significant adverse environmental effects will result from the project.

XVI. UTILITIES AND SERVICE SYSTEMS. <i>Would the project:</i>				
a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?			X	
b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?				X
c. Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?			X	
d. Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?			X	
e. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?				X
f. Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?			X	
g. Comply with federal, state, and local statutes and regulations related to solid waste?			X	

Discussion:

A substantial adverse effect on Utilities and Service Systems would occur if the implementation of the project would:

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

- Breach published national, state, or local standards relating to solid waste or litter control;
 - Substantially increase the demand for potable water in excess of available supplies or distribution capacity without also including provisions to adequately accommodate the increased demand, or is unable to provide an adequate on-site water supply, including treatment, storage and distribution;
 - Substantially increase the demand for the public collection, treatment, and disposal of wastewater without also including provisions to adequately accommodate the increased demand, or is unable to provide for adequate on-site wastewater system; or
 - Result in demand for expansion of power or telecommunications service facilities without also including provisions to adequately accommodate the increased or expanded demand.
- a) No significant wastewater discharge or surface run-off will result from the proposed parcel map or the development of single-family residences on the proposed new parcels.
- b) No new water or wastewater treatment plants are proposed or are required because of the project. Adequate area for on-site septic systems has been approved by the Environmental Management Department.
- c) Stormwater drainage facilities are required on-site so as to reduce runoff to discharge levels that do not exceed site discharge levels, which existed prior to development of the site. All such drainage facilities shall be built in conformance with the standards contained in the *County of El Dorado Drainage Manual*.
- d) The project proposes the water to be supplied by individual wells. El Dorado County Environmental Management has approved well reports for each of the proposed parcels.
- e) In this case, wastewater disposal for the parcel will be provided by an on-site septic disposal system.
- f) In December of 1996, direct public disposal into the Union Mine Disposal Site was discontinued and the Material Recovery Facility / Transfer Station was opened. Only certain inert waste materials (e.g., concrete, asphalt, etc.) may be dumped at the Union Mine Waste Disposal Site. All other materials that cannot be recycled are exported to the Lockwood Regional Landfill near Sparks, Nevada. In 1997, El Dorado County signed a 30-year contract with the Lockwood Landfill Facility for continued waste disposal services. The Lockwood Landfill has a remaining capacity of 43 million tons over the 655-acre site. Approximately six million tons of waste was deposited between 1979 and 1993. This equates to approximately 46,000 tons of waste per year for this period. This facility has more than sufficient capacity to serve the County for the next 30 years.
- f) County Ordinance No. 4319 requires that new development provide areas for adequate, accessible, and convenient storing, collecting, and loading of solid waste and recyclables. For residential development, curbside trash and pick-up of recyclable materials is provided by a local provider contracting to the property owner for the service.

FINDING: No significant impacts will result to utility and service systems from development of the project. For the “Utilities and Service Systems” section, the thresholds of significance have not been exceeded and no significant environmental effects will result from the project.

Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporation	Less Than Significant Impact	No Impact
--------------------------------	---	------------------------------	-----------

XVII. MANDATORY FINDINGS OF SIGNIFICANCE. Does the project:			
a. Have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?		X	
b. Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?			X
c. Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			X

Discussion:

- a) There is no substantial evidence contained in the whole record that the project will have the potential to degrade the quality of the environment. The project does not have the potential to substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant.

As discussed in the Cultural Resource Section, there is the possibility of an impact on a significant cultural resource. An appropriate mitigation measure has been incorporated reducing impacts to cultural resources to less than significant.

Any impacts from the project will be less than significant due to existing standards and requirements imposed in the conditioning of the project and incorporation of a mitigation measure.

- b) Cumulative impacts are defined in Section 15355 of the California Environmental Quality Act (CEQA) Guidelines as “two or more individual effects, which when considered together, are considerable or which compound or increase other environmental impacts.” Based on the analysis in this Initial Study, it has been determined that the project will not result in cumulative impacts.
- c) Based upon the discussion contained in this document, it has been determined that the project will not have any environmental effects which cause substantial adverse effects on human beings, either directly or indirectly.
